

From PA to Analyst

There's a diverse range of careers and roles at DVLA and a huge focus on personal development within the agency. Jodie Lewis, an IT Business Analyst (BA), tells us about her career journey at DVLA.

First steps

I started in a temporary position processing online driving licence applications. I'd left a permanent position and I was terrified of not gaining permanent employment. But I learned everything I could, listened to all my feedback and six months in, I was made permanent. I was absolutely chuffed!

Two months later, I saw an internal advert for a personal assistant role in Human Resources (HR) and I called the contact for a quick chat about the role and submitted an application. I was successful at interview and that was the beginning of my journey into the world of HR. I supported DVLA's IT Services (ITS) Business Partner and the knowledge and relationships I built from this point were important for everything that came next.

While working in HR I took every opportunity, including creating leaflets, monitoring recruitment figures and reporting back to the Department for Transport Resourcing Group (DRG). I learned lots along the way and was promoted to PA for DVLA's Deputy Director of HR.

When I saw an opportunity for a completely different role as a secondment in our ITS Recruitment Support team, I knew I wanted to go for it. I had wanted to move into ITS for a while and a recruitment role seemed the perfect step

to make that next move.

Steps towards Business Analysis

I first became interested in [Business Analysis \(BA\)](#) when supporting a DVLA recruitment scheme for a BA role in London as part of the Clean Air Zone (CAZ) project. I got to meet the candidates, saw their CVs and I quizzed the interviewers about the role, asking what skills they look for and the type of person they'd like to work with.

On my return, I asked to shadow one of the BAs on the DVLA team so I could ask some more questions, with the aim of understanding 'a day in the life'. When the next round of recruitment opened up at DVLA, I was able to write about my skills in a relevant way to show how they could be useful in the BA role.

Learning more

There's a lot to learn [when you become a BA at DVLA](#). Before I started in the role I prepared by sitting the 'Foundation in Business Change' exam.

I've been able to develop my skills with training opportunities – even during the pandemic – and have taken several exams including 'Foundation in Business Analysis' and 'Managing the Requirements Process'. It's fantastic to have such focus on my personal development. The training is also helping me to prepare me for the [BCS International Diploma of Business Analysis](#) oral exam.

During training I studied the theory and methods but the real world can be a little different. I have learned a lot of this role 'on-the-job' and no day is the same. One day I am running a workshop with stakeholders to understand their requirements, the next I could be developing process maps or writing acceptance criteria for stories. BAs can work across multiple projects and can move as and when they're needed.

I've had to get my head around technical talk with squads and am still learning about the drivers and vehicles processes.

Best things about the job

There are so many great things about this role. I enjoy the interesting nature of the projects I'm currently aligned to and seeing all the innovative things the squads do.

My ever-growing team have been so friendly and supportive. The experience between them is vast and it's great to have people to bounce ideas off and discuss things that you may not understand or even to get a different perspective on things. I'm so excited to be in a role where I get to play a part in the changes that are happening within DVLA now and in the future.

It's been a massive change of direction in my career but I'm thrilled to have the chance to do it. The role is challenging and there is a lot to learn but at the same time, I couldn't be more excited about the opportunity I've been given. Taking that temporary position was the best move I've made and I'd definitely recommend [working at DVLA!](#)

If you enjoy problem solving, building good relationships, asking challenging questions and can articulate your findings in a way that people understand then you'll likely make a good analyst. [Check out our latest opportunities on Civil Service Jobs.](#)

[Creating great online services: how we test services in our research lab](#)

To design online services which improve the experience for users when they transact with DVLA, it is important to understand what our customers need from us.

Our User Experience (UX) team use several different testing methods to get this insight. Dan Williamson, User Research Lead, explains more about user testing at DVLA.

Why, when and where we test

Government services should be as simple, inclusive and accessible as possible so that everyone can use them. If we want our customers to complete a transaction using a certain channel, we need to make sure what we offer them is the best it can be.

Testing happens throughout a service development. We determine the frequency and the method of testing based on the features within the service that have changed.

Under normal circumstances, we do roughly 40% of our testing in [our UX Lab](#). It's a state of the art facility that uses connected devices, cameras and microphones so that we can test developing digital services with users. With participant consent to filming, we record what we find and this footage is used to inform changes to the services and provides evidence for why we make those changes.

The rest of our research is carried out across the country in meeting rooms, in context in a participant's home or place of work, or on the street.

Our testers

Some of our services are targeted at certain types of user (for example vocational drivers or [drivers with a medical condition](#)) and sometimes we will need to speak to specific segments within our customer base (such as [people who have received a fine](#), use certain technology or are of a certain age).

We have a contract in place with a participant recruitment company and we send these specifications to our recruiters together with details of when and where we want to carry out the research.

Before testing starts

Once we have agreed the objectives for the research with the service designer, we plan the session with the interaction designers who build the screens we test.

We may ask questions like:

- which features do we want to test/discuss with the user?
- where do we think we may identify pain points?
- which research technique do we think will work best?

Then we write a topic guide for the session. This contains the main points and themes we want to cover during the session, as well as prompts for the researchers to remind them where to delve a bit deeper.

The day of testing

We always spend some time getting an understanding of the participants; how confident they are in using digital services, what devices or apps they use and a bit about their socio-economic background. This helps us to get to know them and puts the participant at ease too.

If we are testing screens for usability, we set the scene and give the participant tasks to complete. It is human nature to help people when they get stuck, but as researchers, the value comes from seeing where they fail.

Sometimes we conduct an in-depth interview with the participant. This is designed to understand their behaviour at a deeper level – why they do things in a certain way, how they feel about what we are talking about or what we could do to make things simpler for them.

Outcomes of testing

Every insight we get adds value – whether that is changing the flow of a service, moving things around on a screen or amending content. Every service we have been involved in has been changed based on our research.

It isn't often that we get a real 'Eureka!' moment and a lot of the insights we get are used to inform subtle, iterative changes to a service that make it more useable, simpler and more inclusive. Equally these small changes could have a benefit to the organisation, such as increasing the ability for customers to self-serve or reducing casework and demand on the Contact Centre.

But sometimes user testing shows that a very small change can be beneficial. While testing the prototype for the [penalty payment online](#) with participants it was identified they did not understand that they needed to tax their vehicle or tell us they were keeping it off road, once they had paid the fine.

On the 'payment successful' page of the service, the participants were told in large bold print that they had to either tax, [register their vehicle as off the road](#) or dispose of their vehicle, however when asked what they thought they had to do next, the majority of users missed that instruction and thought they taken all necessary action to complete their task.

This was fed back and a new prototype was created so that the participant was taken to [pages where they could tax](#), make a Statutory Off Road Notification

(SORN) or [dispose of their vehicle.](#)

We are committed to user-centred design. We have a great record for user research at every Government Digital Service (GDS) Service Assessment which take place at several stages before we can put our service on GOV.UK.

Our research has been the basis for so many changes, from small tweaks to wholesale change in a constant effort to get these things right for our users.

Now you've seen all the hard work that goes into making a great online service – why not check out the [wide range of services we provide on GOV.UK](#) and try them for yourself?

[How DVLA's corporate induction process helps new starters](#)

I applied for a job as a software engineer at DVLA because of my passion for coding. I have a degree in Mathematics, but after completing a Professional

Graduate Certificate in Education I realised that coding was what I wanted to do. What also attracted me to the role is that it also allows me to study for an [MSc in software engineering at the University of Wales Trinity Saint David \(UWTSD\)](#).

Starting in September 2018 with 18 other eager students I had no idea what to expect, and I was naturally nervous (as we all are) on my first day. In the following days and weeks I would:

- be given a guide to my first 6 weeks, outlining all mandatory training
- be inducted into my new team
- attend several induction workshops

I fully expected my induction to cover security, data protection, health and safety, and how to conduct yourself at work – which it did. What surprised me was that we would also learn about unconscious bias, counterfraud, social media usage policies and sustainability. It was interesting and educational, and it gave me real insight into how DVLA values high standards of personal conduct which is vital when you work in the Civil Service.

Team induction

Initially I attended UWTSD for 4 days a week with one day with my team in DVLA. This allowed me to develop my skills, for example, problem solving and team working at DVLA and UWTSD.

After a warm welcome and introduction to my new team during the [daily standup meeting](#) I was placed into a squad, which is a cloud team [using microservices architecture](#). I observed and learnt the tools, processes and overall

structure of DVLA services, gradually increasing the hours to allow me to become more confident in my new role.

A key turning point in my induction was a training course I attended with the other students. Split up into 3 squads we were tasked to build a news, sport and weather application [working in an agile way](#). We were all given a category of the app (mine was the news category) and asked to develop a webpage to display sport information. I needed to use software tools like elastic beanstalk and languages like java to develop the functionality of a webpage. The course taught me how to work as part of a team towards a common goal and we did it with time to spare.

How the training has helped in my role

I'm now [working in the emerging technology lab](#) where we develop new ideas for the organisation's digital services.

Using the skills I built up through the induction process I was able adapt to a role which needed me to communicate with key stakeholders, develop prototypes and demos for products we were working on and [make learning fun for children in a school hosting day](#). I've also taken part in a project to investigate robotic process automation and chatbots where [I worked with my team to develop a prototype robot](#).

The induction allowed me to settle in, understand my role, develop new skills, and gain the knowledge to do the job properly. I really enjoy my work. It has also helped me transform from schoolteacher to civil servant. Through this, I now know the difference between working in a class of children to working in a squad of experts.

Next steps

I'm really happy in my role at the moment. In future I'd like a role where I can experience all aspects of the organisation. For example: making business decisions, developing services, provide training or interviewing new candidates. Who knows what the future may hold here at DVLA.

Roles at DVLA

DVLA will support you in reaching your full potential, offering rewarding and challenging jobs, training plans and ongoing development opportunities.

DVLA: encouraging the IT experts of tomorrow

The UK needs 100,000 new graduates in Science, Technology, Engineering and Mathematics (STEM) subjects every year. But currently only 6% of the workforce in STEM related subjects are female. [Research conducted by the Welsh government](#) has shown that a staggering 93% of parents would not support their daughter to pursue a career in a STEM subject. But, when asked at school, 39% of girls said they enjoy Information Technology, Computing and Design Technology.

Employing around 5,000 people in Swansea, DVLA was one of the first government departments to bring its IT function 'in house' and has one of the largest self-sufficient IT departments in government. This puts us in a perfect position to share our knowledge and expertise with the up-and-coming generations, to try and encourage a culture change that will get more women into IT roles.

Bring your daughter to work

We've recently introduced a 'bring your daughter to work' day. Here we aim to close the gender gap in IT by inviting staff to bring their daughters to work in a bid to spark interest from girls to consider a career in IT.

We want to encourage girls, who often give up on IT once they join secondary school, to keep going with STEM subjects (science, technology, engineering

and mathematics) and add them to their choices for exams as they go through secondary school.

DVLA's chief technology officer Brian Sullivan said:

"We're well aware that there are more men than women working in the IT sector and this is just one of the ways in which we are trying to change that here in Swansea.

"If we can encourage more girls to take an interest from an early age, in 10 years we will have more local women qualified and ready for a career in IT. It would be great to see them working here at DVLA."

Other initiatives

'Bring your daughter to work' is just one of our initiatives in this space. We also run events where all children aged 11 to 13 are invited to spend the day at DVLA and try some fun coding activities, learn about new technologies and pick up some new skills along the way.

All content is age appropriate, light and interactive where possible. At the end of the day there's a topical, fun quiz based on the learning gained from the day, with prizes too – always a hit with the children.

Some feedback we've had from the children, teachers and parents:

"It was really good and a lot more interesting than I thought it would be."

"I thought we were going to be sat at computers and that it would be a bit boring, but it's been really fun. The activities were very good."

"Good presentation. Activities were fun and pitched at the right level. The children were engaged throughout."

"In the future these skills will be used back at school for coding tasks."

"I think it was a great experience & should be rolled out for all schools."

"Must have listened well as she told me about it after the day!"

This feedback is a good indicator that we were able to inspire participants to want to continue their learning journey. It certainly meets with our vision of investing in digital skills.

What's coming next

Capability and Talent Development Lead, Karen Clark said, "Our aim is to ensure that as an agency, we continue to support and grow the digital skills of young people in the local region and this is a brilliant opportunity to inspire the next generation.

Along with promoting the learning of STEM subjects, this is a great way for us to position DVLA as a leading digital and technology employer and a great place to work for future generations.”

[Our waste, our responsibility](#)

Reducing our carbon footprint is a great way to save money, boost staff morale and lessen our impact on the environment. But applying this to a business takes a bit more thought than remembering to separate plastic from paper.

The new contract

We recently awarded a new ITS waste contract to a local supplier that offers a complete asset management process. This includes data cleansing, repairing and refurbishing old IT equipment.

The contract includes the option of selling our IT kit back to the private sector and, where possible, clawing revenue back in to the public purse.

Through this new contract we have reduced our destruction costs to zero, making an instant annual saving of £62,000.

How we do it

Our IT kit is carefully wiped of all data to make sure that everything is removed before it leaves DVLA.

It is then collected by the supplier and placed on a production line, where a physical check is carried out to check for any damage. Each element is given a monetary value, before being cleaned up and sent for resale or donation.

Where it all goes

We have a history of donating IT equipment to local schools, voluntary and charitable organisations through our sustainability team. Laptops, desktops and other redundant IT equipment have also been donated to schools in Zambia as part of the [Giakonda project](#) and to the [Sponsoring Academic and Medical Access charity](#).

Laptops have also been reused through our [ITS DRIIVE programme](#). We were able to identify which schools in the local Swansea area would benefit most from our old equipment by working with the [Welsh Assembly](#).

Why it matters

Awarding this contract means we are closer than ever to achieving the goals as set out in our [sustainability report](#).
