

Greens call for Big Five energy companies to be brought into public ownership to stabilise market and protect consumers

17 August 2022

- **Green Party set out plan to restore the energy price cap to rate of October 2021**
- **Intervention would reduce the cost to the average household by more than £2,000**
- **Carla Denyer: “This experiment with the energy market has failed. Only the government can intervene at the scale required to avoid a catastrophe this winter”**

The Green Party has called for the big five energy suppliers to be brought into public ownership and for the price of energy to be returned to where it was in October last year to protect households from accelerating energy costs.

As Ofgem continues to raise the energy price cap beyond affordability [1], the Greens have called for a powerful intervention in a market that is clearly failing.

Green Party co-leader Carla Denyer said:

“We are seeing nationwide anxiety about the prospect of unpayable energy bills this winter.

“Other parties have only offered to fix energy prices at current levels, but we know these are already unaffordable. We would return energy prices to an affordable level.

“This experiment with an energy supply market has failed. Only the government

can intervene at the scale required to avoid a catastrophe this winter.”

The party has called for the Big Five energy supply companies to be taken into public ownership, as proposed by the TUC [2], and restore the energy price cap to the level of last October.

The Greens say this would reduce the cost to the average household by more than £2,000 [3].

Denyer said:

“Everyone needs to use energy to survive, for basic needs like cooking and keeping warm. However, tackling the climate crisis requires that we improve our energy efficiency in this country.

“That’s why our differential tariff will cover basic energy needs but will include progressively rising prices for those who use more energy, with exceptions for those with disabilities and chronic health conditions, alongside support for those companies offering 100% renewable electricity, which is the cheapest form of electricity.

“Alongside an ambitious national home insulation scheme, this will help bring down energy use across the country.”

The Greens are renewing their call for home insulation to become the government’s top priority. Reducing energy demand by increasing energy efficiency is the most important step the government can take to ensure the UK’s long-term energy security.

Denyer said:

“Fixing the price of energy will put huge stress on energy supply companies, which is why we propose bringing the largest into public ownership and offering subsidies to smaller suppliers, especially the renewable energy specialists who have done so much to innovate in recent years.

“By bringing the big five energy retail companies into public ownership, setting the price of energy at an affordable rate and absorbing the global price rises, the government could make sure everybody can afford to get through this cost of living crisis.

“At the same time, it will mean this public service will be able to be run in the public interest, instead of in the interest of profit making.”

The TUC estimates it will cost £2.8bn to bring the big five energy retail companies into public ownership. This is less than the government has already spent to clean up the mess caused by the collapse of energy companies last autumn.

The Green Party has calculated it will cost £37bn to fix the price cap at the rate of last October. It says that closing the loopholes in Sunak’s windfall tax [5] and the higher VAT revenues resulting from higher prices across the rest of the economy could go a long way towards funding this vital policy.

The party is also prepared to increase taxes on the super-rich for a policy that benefits them as well as those on the lowest incomes who need the most help.

Notes

1. Costings based on Cornwall Insight projections; note that they are projecting falls in energy prices by Q3 2023:

<https://www.cornwall-insight.com/price-cap-forecasts-for-january-rise-to-over-4200-as-wholesale-prices-surge-again-and-ofgem-revises-cap-methodology/>

2. TUC plan for renationalisation of Big Five energy companies:

<https://www.tuc.org.uk/news/tuc-publishes-plan-cut-bills-through-public-ownership-energy-retail>

3. The energy price cap in October 2021 was £1,277, compared to the predicted price cap rise in October 2022 of £3,582. By keeping the price cap at the October 2021 rate, households will save more than £2,000

[Greens call for action on water companies as England faces heat health-alert and drought](#)

Green Party

9 August 2022

The Green Party has called for a series of measures to help stop three billion litres of water being wasted each day as a heat health-alert comes into force and England faces its worst drought in decades, with many households facing hosepipe bans and water shortages.

Greens are calling for an immediate enforcement order on water companies, along with a cut to executive pay, an end to dividends to shareholders and for the water supply to be brought back into public ownership as soon as is practicable to do so. They point to monopoly water companies losing between a quarter and a fifth of the water in their mains through unrepaired leaks while sewage regularly flows into rivers and coastlines [1].

Adrian Ramsay, co-leader of the Green Party, said:

“As the country faces a severe drought and people are asked to cut their water use, more than three billion litres of clean water is wasted every day due to a network of pipes riddled with leaks [2]. Shockingly, the most wasteful water companies waste more water than they provide to their customers. It’s time to hold the water companies and the water regulator to account and see some firm action against this scandal.

“We need Ofwat to apply an enforcement order on companies to properly carry out their statutory functions [3] – which includes ensuring that water actually reaches people’s homes and sewage doesn’t go into watercourses or end up on our coastline.

“But beyond that, the water industry cannot continue to be rewarded for failure. The £57bn paid out in dividends over the last 30 years [4] and hugely inflated salaries of water bosses [5] should have gone towards plugging the leaks. Instead of these companies being awash with profits and leaking funds towards shareholders, Greens say we should cut dividends and ensure water bosses earn no more than ten times the salary of the lowest paid in their companies.

“Ultimately, to end leaks, stop sewage discharges and cut bills we need to take the water supply back into public ownership, which is what the Green Party believes must be done at the earliest practicable opportunity.”

[Greens call for immediate financial support for most vulnerable following interest rate rise](#)

4 August 2022

Responding to the news that the Bank of England has raised interest rates to 1.75%, the biggest rise in 27 years, Green Party peer Natalie Bennett said:

“Today’s report from the Bank of England is devastating and paints a picture of our economy caught between the twin evils of out-of-control inflation and recession. Our entire economic system is in crisis and this Conservative government clearly has no idea what to do about it.

“The Bank of England is swinging its interest rate sledgehammer with little regard for the impact on working families who are already struggling. Raising interest rates to tackle inflation is like a doctor reaching for cyanide in response to a strychnine poisoning.

“Meanwhile those who should be showing leadership are indulging in fairy tales about tax cuts and growth.

“A decade of austerity and dependence on fossil fuels has left us economically and socially vulnerable to oil price shocks. A complete retrofit of our economy is urgently needed to ensure resilience.

“We need to see a raft of measures to provide immediate financial support to those who need it most, including an uplift in Universal Credit by £40 a week

and a much bigger windfall tax, without the Tory government's loopholes, on oil companies who are currently making huge profits off the suffering of everyone else."

[Replace 'scraps' with proper transport funding across the regions, say Greens](#)

4 August 2022

Greens have accused the government of providing 'scraps' for transport funding across English regions compared to London and the South East. They point to the announcement of just £200 million to develop a mass transit network in West Yorkshire [1] compared to the £18.8 billion spent on Crossrail in London [2].

Green Party transport spokesperson, Matt Edwards, who is a Green Party councillor in Bradford, said:

"For decades transport spending in London and the South East has eclipsed the scraps we see in the North and other regions of the country. The paltry amounts promised to West Yorkshire to help deliver a new rapid transport network to one of the largest metro areas in Europe simply reinforces this imbalance. Regions outside London and the South East are being sold short."

"The dire financial situation of Transport For London and the cuts to

services across the South East show even these areas are not getting the funding required. But proportionally the rest of the country absolutely needs more funding if this government is serious about “levelling up.”

The Green Party recently called for axing the £27bn road building budget and diverting the money to pay for huge investment in public transport [3]. Councillor Edwards points to Greens in power delivering improved and affordable public transport:

“In Scotland Greens successfully pushed for free bus travel for all those under 22 and in Herefordshire, Greens on the Council ensured that Covid Recovery funds were used to provide free weekend buses. And just this week in Sheffield, after years of campaigning, Green councillors secured the return of a free circular bus service in the city centre [4].

“We need to transform how people in this country get around to get more people out of cars, and on to public transport, cycling and walking. The funding the government is offering is not going to deliver that anywhere.”

BP profits and fear of energy bills: Greens call for 'super tax on dirty profits'

2 August 2022

Commenting on almost £7bn profits by BP between April and June [1], while one in eight UK households fear they have no further way to make cuts to afford a sharp increase in annual energy bills this autumn [2], Green Party co-leader Adrian Ramsay said:

“These dirty profits made by climate wrecking corporations are completely obscene when millions of households are having sleepless nights over how they are going to pay their energy bills this winter. We need to super tax the grotesque profits of oil and gas companies to ensure that everyone has a warm home this winter.

“Every week that goes by with no leadership from government is a week wasted that could have been spent insulating homes. And every pound that goes into the pocket of a fossil company executive is a pound that should have been spent on insulating the homes of lower income households.

“But the Tories have left it too late. We cannot insulate enough homes fast enough to protect people this winter, which is why we need to adopt the policy of a social tariff, ensuring that the amount people pay for energy relates to their income. And to add £40 per week to the income of all those on universal credit and other legacy benefits to help with the knock-on effect of energy price rises on food and clothing.”
