Keeping British MotoGP visitors on track for safer rides

Some 120,000 people will flock to the event over the bank holiday weekend (23 to 25 August) and Highways England traffic officers will be on patrol to help make sure visitors' journeys are as safe and smooth as possible.

With a large number of motorcyclists expected, Highways England will also be inside Silverstone with partners from the emergency services to promote key safety messages.

These will include a reminder to motorcyclists to make sure they wear the right clothing at all times, even if the sun is shining.

The warning comes after 35 per cent of those who took part in an online snap poll by Highways England admitted they have left their protective kit off on a sunny day.

Highways England also posed a similar question to motorcyclists at this year's British Superbike Championships at Silverstone. Almost 200 people were questioned face-to-face at the event and almost one in five (19 per cent) admitted they wear less protective gear on sunny days.

Fifty-nine per cent of the racing fans said they always wear protective clothing when they go out on their motorbikes. Only six per cent said they never do. When also asked whether they would take out a pillion passenger without any protective clothing, 26 per cent said they would.

With most motorcycle accidents taking place in the summer months, the importance of protective kit will be one of the safety messages at the Highways England stand over the Grand Prix weekend. There will also be information about the Stay Safe, Stay Back tailgating campaign and the new motorway safety campaign which highlights the basics of motorway driving, including what to do if you break down, keeping left except when overtaking, and obeying red X and variable speed limit signs.

Highways England traffic officers will be on hand to share the benefit of their experience and giving advice on what to do if your vehicle breaks down.

Also attending will be representatives from BikeSafe, the DocBike charity and Biker Down initiative.

Highways England Head of Road Safety Richard Leonard said:

Motorcyclists are one of the most vulnerable groups of road users and we are committed to improving the safety on our network for everyone who travels or works on it.

So we are heading to Silverstone this weekend to take the opportunity to remind motorcyclists, particularly young riders, of the need to wear protective clothing every time they go out on their bike.

Safety should be the most important factor when getting ready to go for a ride – not the weather.

Meanwhile, those travelling to Silverstone this weekend will find traffic arrangements in place to ease congestion with a one-way system on the main A43 on Sunday and extra traffic officers patrolling the area over the three days.

From 12.30pm on Sunday to about 8pm, the A43 northbound will be one-way from Silverstone to the Abthorpe roundabout.

Highways England Emergency Planning Officer Jamie Tomlin said:

The British MotoGP always attracts a big crowd so we would advise anyone heading to Silverstone to plan their journeys in advance and make sure they leave plenty of time for the trip.

We will have traffic officers on hand to deal with any incidents so we can get traffic flowing as quickly as possible and the one-way system on Sunday will help with the high volume of traffic.

Parking over the weekend is free for motorbikes but there is limited car parking and visitors are advised to book in advance.

The racing takes place Friday to Sunday while tomorrow (Thursday) there is the Day of Champions organised by Two Wheels for Life which raises money for their work in Africa. Stars of MotoGP take part in a live auction on the day, donating signed leathers, boots, helmets and one-off prints.

There is live entertainment at the end of each day's racing with Legacy playing on Friday, Clean Bandit supported by Duke on Saturday and Toploader on Sunday.

The Highways England stand can be found in the Entertainment Zone at Silverstone.

General enquiries

Members of the public should contact the Highways England customer contact

centre on 0300 123 5000.

Media enquiries

Journalists should contact the Highways England press office on 0844 693 1448 and use the menu to speak to the most appropriate press officer.

Have you caught a Pacific pink salmon in England?

Up until recently, catching a Pacific pink salmon was as rare as netting a red herring. However in 2017 unprecedented numbers of this species were reported within inshore coastal waters and rivers in Scotland and England.

In Scotland, pink salmon were found to have spawned successfully producing viable eggs that hatched into fry (juvenile fish).

Seven pink salmon were subsequently recorded by anglers in or close to English rivers. Four of which were seen in the North East of England including the River Wear, River Tyne and the River Coquet with other specimens recorded as far west as the Hampshire Avon in Dorset.

Pacific pink salmon were originally introduced to a number of Russian rivers in the 1960s and have slowly spread westwards colonising additional rivers in northern Norway.

Owing to the two year life cycle of this species, 2019 will be the first year that we can expect to see these fish return in numbers.

If anglers or commercial netsmen do catch a Pacific pink salmon then the Environment Agency would love to hear from you, as we are interested in monitoring their numbers and distribution at a regional and national scale.

This year so far, there have been seven confirmed incidences of pink salmon across the UK and the Republic of Ireland – one in Wales, one in Ireland, three in Scotland and two in a T net set to catch sea trout off the Northumbrian coast.

These numbers accompany the earlier sightings recorded back in 2017.

Jonathan Shelley, Net Fishery Programme Manager at the Environment Agency, said:

From examining the specimens that were captured and recovered two years ago by the Environment Agency, no notable disease or novel parasites were detected. However, we need to remain watchful and

continue to investigate the possible risk of undesirable consequences arising from the presence of this species.

It is anticipated more pink salmon will be observed over the coming weeks and fisheries managers, anglers and netsmen are requested to remain vigilant, particularly if fishing in the lower reaches of the river systems.

Fisheries management organisations across the UK are sharing advice to ensure that any appearance of pink salmon in England can be monitored and managed appropriately.

Simon Toms, National Fisheries Management Team Leader for the Environment Agency said:

Wild Atlantic salmon stocks are already under great pressure from a variety of sources. The introduction of novel parasites or diseases from invasive species, such as Pacific pink salmon, could potentially represent an additional risk to the viability of the species.

We therefore want to better understand the immediate risk that pink salmon could represent to our important wild salmon stocks. We are urging anglers to report the capture of all pink salmon to us [Environment Agency] as soon as possible after capture. These fish could turn up in any river in England but are most likely to be found in rivers in the North East and North West of England.

The Environment Agency has some helpful advice about what to do if people catch or observe a Pacific pink salmon.

Please record the following details:

- A clear photograph
- Date of capture or sighting
- Location of capture (grid reference if possible) and details of the site
- Method of capture
- Sex of fish
- Take a scale sample from the fish captured
- Freeze and store the fish whole as soon as possible after capture
- Note the weight and fork length measurement of the fish

Important additional note for all anglers and migratory salmonid netsmen:

If you hold a salmon rod or net fishing licence and you are confident that you have caught a Pacific pink salmon, the fish should be humanely despatched and retained. Please do not return the fish to the river or sea.

This guidance also applies to rivers with mandatory catch and release for Atlantic salmon or trout and coarse rod licence holders. In either instance, it is important that if retaining a pink salmon, please call the Environment Agency immediately on 0800 80 70 60 to report the capture and retention of this fish. The capture will then be formally logged. If it is not possible to make this call the fish should be released back to the river alive.

If you are unable to retain whole specimens, please ensure that scales and fin clips (adipose or a clip from any other fins) are collected, as well as a sample of dorsal muscle tissue (at least 2cm x 2cm) if this is possible.

This advice also relates to fresh, dead fish found in English rivers. If you have permission from the owner, fish can be stored in a suitable, sealed plastic bag and stored in a standard domestic freezer before collection. Please also store the capture details together with the fish in a separate sealed plastic bag if at all possible.

Please also be vigilant for any early or unusual spawning activity particularly during August and September when pink salmon are most likely to be active in spawning areas.

The Environment Agency has produced a useful guidance factsheet with all of the advice needed for individuals who catch a Pacific pink salmon.

If people would like to request a copy of the advisory PDF please email Jonathan.Shelley@environment-agency.gov.uk

Alternatively if you wish to report anything to the Environment Agency or gain specialist advice please call our incident line on 0800 80 70 60.

[Have you caught a Pacific pink salmon in England?](#)

The inland and coastal waters of England are home to a host of different fish species, but we can now add another name to that list, the Pacific pink salmon.
