

News story: Committee on Radioactive Waste Management visit to Sellafield

The visit gave the committee the chance to observe progress on decommissioning progress first hand. Sellafield Ltd currently manages roughly 60% of the UK's waste inventory by volume and will be a key stakeholder for any potential UK Geological Disposal Facility.

The committee received updates on Sellafield Ltd projects and organisational structure. Committee members visited the site, observing ongoing decommissioning projects such as the First-Generation Magnox Storage Ponds (FGMSP), the Windscale Advanced Gas-cooled Reactor (WAGR) boxes, and the Highly Active Liquor Evaporation and Storage (HALES).

The Committee observed significant progress in decommissioning and remediation since their [last visit on 5 October 2017](#).

News story: Committee on Radioactive Waste Management tour of the Dalton Cumbrian Facility

Committee on Radioactive Waste Management tour of the Dalton Cumbrian Facility – GOV.UK

The Committee on Radioactive Waste Management (CoRWM) visited Dalton Cumbrian Facility on 19 June 2018.

The committee visited the Dalton Cumbrian Facility (DCF) on 19 June. This is

a £20 million facility which opened in September 2013 and was jointly funded by the University of Manchester and the Nuclear Decommissioning Authority. It is a state-of-the-art ion beam and gamma irradiation facility for nuclear research and development and is part of the National Nuclear User Facility (NNUF), the National Ion Beam Centre and Royce Institute for Advanced materials.

The committee was given a tour around the facility, including visits to the ion accelerators and beamlines, gamma irradiator and materials characterisation laboratory. These facilities allow scientists to assess radiation damage in a short period, that would normally occur over longer timescales. The committee gained insight into the cutting-edge research going on at DCF exploring radiation damage in different materials key to the nuclear industry. A large portion of the research activities is dedicated to decommissioning and the safe management and disposal of radioactive waste.
