

Press release: Iconic Spaghetti Junction featured on big screen

It's stood tall above the city of Birmingham for the past 50 years – and now the foundations of Spaghetti Junction have played a part in Steven Spielberg's new big-screen adventure Ready Player One, now in cinemas.

Highways England facilitated filming for Ready Player One underneath the iconic structure – known officially as Gravelly Hill interchange – in August and September 2016.

The towering concrete columns, some reaching to 80 feet high, formed the ideal backdrop to the film, which is in cinemas now.

Special templates featuring graffiti were stuck to the concrete structures and various props added into the set, including cars and tyres, with a 'camp' constructed for the new film.

The crew took considerable effort to protect the structure and ensure nothing was damaged during filming. Emergency planning officer for Highways England, Frank Bird, said:

We're thrilled to finally see the structure on the big screen and we were more than happy to facilitate filming for the staff and crew that were down on-site.

We spent considerable weeks working with the film company and producers and they were really pleased to be allowed access underneath the road. It's not something that we do every day, but as it was a new Steven Spielberg film, it was an opportunity we couldn't refuse. Those travelling on the road had no idea what was taking place underneath and that is testament to the hard work and organisation that went into this facilitating this project.

Work started on Spaghetti Junction some 50 years ago this year and it's great to see that the road continues to hold international acclaim.

The structure continues to carry more than 220,000 vehicles every day and is subject to regular maintenance projects, many of which go unseen by the travelling public.

General enquiries

Members of the public should contact the Highways England customer contact centre on 0300 123 5000.

Media enquiries

Journalists should contact the Highways England press office on 0844 693 1448 and use the menu to speak to the most appropriate press officer.

[Policy paper: Beyond the ice: UK policy towards the Arctic](#)

This document follows the publication in 2013 of the government's first Arctic Policy Framework, [Adapting to Change](#), which set out the UK's approach towards the Arctic, based upon the 3 principles of respect, co-operation and appropriate leadership.

These principles remain central to the UK government's approach to the Arctic. We recognise that Arctic stewardship rests with the Arctic States and the indigenous peoples of those States, and continue to support their efforts to ensure a sustainable future for the region. The main commitments include:

- helping to understand a changing Arctic through world-class science
- protecting the Arctic's fragile environment
- promoting prosperity in the region

The UK will show leadership in matters of global importance such as climate change and tackling pollution in our oceans. We will also encourage UK companies to explore commercial opportunities, while ensuring that people who depend on the Arctic for their livelihoods can continue to do so sustainably for generations to come.

[News story: New requirements for farmers to improve environment for all](#)

New rules are now in force which will protect the water environment and save farmers money.

[The new rules](#), which came in to force on 2 April 2018, mean it is now mandatory for all farmers in England to maintain good practice to protect water quality and prevent water pollution incidents.

Collectively, farming related pollution incidents can harm wildlife in our rivers and seas. They also impact on our economy, resulting in higher bills

from increased water treatment and affect our tourism and shellfish industry. Many farmers have already made great progress in addressing pollution risks but the new rules will help tackle water pollution by ensuring all farmers take action.

The rules will:

- promote good practice in managing fertilisers and manures;
- encourage land managers to take reasonable precautions to prevent diffuse pollution from runoff or soil erosion;
- require land managers to plan each application of manure or fertilisers, based on soil tests, to meet but not exceed crop and soil needs.

Our [25 Year Environment Plan](#) set out how these new rules will require every farmer to identify and manage risks to water and start taking precautions to reduce ammonia emissions, reducing pollution and soil erosion and improving resource efficiency.

Environment Minister Therese Coffey said:

This is a really important opportunity for farmers to reduce pollution in watercourses. In following these rules, farmers will be able to help reduce pollution incidents, improve water quality and save money through more efficient use of resources.

The new rules are an important part of our 25 year plan for the environment which will help us deliver our plans for a Green Brexit and leave our environment in a better state than we inherited it.

The new farming rules have been drawn up with farming and environment representatives so that they are practical, risk based and will prevent and reduce agricultural pollution. They encourage the farmer to think about the risk of water pollution, how to keep valuable topsoil on their fields and to apply fertilisers only when it is appropriate to do so. Farmers and land managers will be able to determine what approach is best for their land, through methods such as deciding when it is safe to spread fertilisers.

The rules cover:

- planning the use of manures and fertilisers to improve soil nutrient levels and meet crop needs;
- storing organic manures and positioning livestock feeders away from water bodies;
- applying manures or fertilisers to minimise impact on the water environment;
- precautions to prevent soil erosion;
- reducing livestock poaching.

Farming rules for water are part of a whole package of measures to help farmers and land managers look after the environment. The government is also investing £400 million through [Countryside Stewardship](#) which supports farmers

in creating or restoring precious habitats and a £12 million farm ammonia reduction grant has incentivised farmers to tackle agricultural emissions.

[Notice: SL5 7TE, Imperial College of Science, Technology and Medicine: environmental permit application advertisement](#)

The Environment Agency consults the public on certain applications for Radioactive Substances Activity. The arrangements are explained in its [Public Participation Statement](#)

These notices explain:

- what the application is about
- how to view the application documents
- when you need to comment by

The Environment Agency will decide:

- whether to grant or refuse the application
- what conditions to include in the permit (if granted)
