## **Official Statistics: Woodland Carbon Code Statistics: data to March 2018**

This release provides quarterly statistics on projects registered under the Woodland Carbon Code. The Woodland Carbon Code is a voluntary standard, initiated in July 2011, for woodland creation projects that make claims about the carbon they sequester (take out of the atmosphere). All projects must be placed on the Register of UK Woodland Carbon Projects. Their claims about potential carbon sequestration are validated by an independent certification body. Validated projects are then verified on a regular basis to confirm the progress of carbon sequestration.

## **News story: Foreign Secretary announces £9m to save our oceans**

Britain will use its position as a leading maritime nation to help Commonwealth Small Island Developing states (SIDS) drive economic development and make the most of their marine environments.

Foreign Secretary Boris Johnson, will announce £9 million over two years to help Commonwealth Small Island Developing states (SIDS) use their marine resources to sustainably grow their economies. The funding which will be

delivered through the Commonwealth Marine Economies programme will also safeguard healthy seas and build resilience against environmental disasters.

**Foreign Secretary Boris Johnson said:**

Britain is using its seafaring prowess to help reverse the decline of our oceans.

Our oceans are the largest living space on Earth with a delicate and complex biodiversity. They are not only integral to the economy, but crucial to supporting the cultures, food and security of the world.

We must as a Commonwealth protect our marine inheritance. That's why today's £9 million will help Commonwealth small island states sustainably develop their maritime environment to create jobs and drive growth.

The Foreign Office is on course to safeguard over four million square kilometres of ocean by 2020 through its Overseas Territories Blue Belt programme. The programme's scientific expeditions around St Helena have discovered a potential new species of octopus. Evidence is now being put to the international scientific community for formal validation.

Through projects in the SIDS such as seabed mapping, sustainable tourism and identifying marine pollution hotspots, the UK will share its world-renowned expertise to help SIDS tackle climate change, reduce poverty and boost the blue economy.

Many Commonwealth countries are at the coalface of climate change, even though their populations account for a tiny fraction of the world's greenhouse emissions. Mr Johnson wants to build global political momentum to ensure that this generation leaves the environment in a better state than we found it.

**Notes to Editors**

- The Commonwealth Marine Economies Programme works in 17 Small Island Developing States (SIDS) in the Caribbean and Pacific, and is delivered by three world-leading UK agencies: the UK Hydrographic Office (UKHO), The Centre for Environment, Fisheries and Aquaculture Science (CEFAS), and the National Oceanography Centre (NOC).
- The Blue Belt Programme works in the UK's Overseas Territories and is run by the Centre for Environment, Fisheries and Aquaculture Science (CEFAS) and the Marine Management Organisation.
- The funding will come from the Conflict, Stability and Security Fund which provides funding for cross-government projects and programmes.

# [Press release: UK Government rallies Commonwealth to unite on marine waste with ambitious plan to end sale of plastic straws, stirrers and cotton buds](#)

The Government has announced the end to the sale of plastic straws, drink stirrers and plastic-stemmed cotton buds at the start of the Commonwealth Heads of Government Summit.

The Prime Minister will also call on all other Commonwealth countries to join in the fight against plastic pollution.

Subject to the consultation, which the Environment Secretary will launch later this year, the Government is prepared to ban the sale of these items in England under plans to protect our rivers and seas and meet our 25 Year Environment Plan ambition to eliminate avoidable plastic waste. This forms part of the wider government waste strategy – including the government’s current call for evidence on how we can use the tax system to address single use plastics waste.

In order to eliminate these items from use the Government will work with industry to develop alternatives and ensure there is sufficient time to adapt. It will also propose excluding plastic straws for medical reasons.

Single-use plastic items such as straws, stirrers and plastic-stemmed cotton buds have a significant impact on our environment, both on land and in our seas and rivers when they are either littered or discarded incorrectly after use – with a recent study showing 8.5 billion plastic straws are thrown away each year in the UK.

The announcement comes as the Prime Minister has urged all Commonwealth countries to sign-up to the newly-formed [Commonwealth Clean Oceans Alliance](#) and take action, be this by a ban on microbeads, a commitment to cutting down on single use plastic bags, or other steps to eliminate avoidable plastic waste.

To drive this forward the UK government has committed a £61.4 million package of funding to boost global research and help countries across the Commonwealth stop plastic waste from entering the oceans in the first place.

Prime Minister Theresa May said:

Plastic waste is one of the greatest environmental challenges facing the world, which is why protecting the marine environment is central to our agenda at the Commonwealth Heads of Government Meeting.

The UK government is a world leader on this issue, and the British public have shown passion and energy embracing our plastic bag charge and microbead ban, and today we have put forward ambitious plans to further reduce plastic waste from straws, stirrers and cotton buds.

Alongside our domestic action, this week we are rallying Commonwealth countries to join us in the fight against marine plastics, with £61.4million funding for global research and to improve waste management in developing countries.

The Commonwealth is a unique organisation, with a huge diversity of wildlife, environments and coastlines. Together we can effect real change so that future generations can enjoy a natural environment that is healthier than we currently find it.

Environment Secretary Michael Gove said:

Single-use plastics are a scourge on our seas and lethal to our precious environment and wildlife so it is vital we act now. We have already banned harmful microbeads and cut plastic bag use, and now we want to take action on straws, stirrers and cotton buds to help protect our marine life.

We've already seen a number of retailers, bars and restaurants stepping up to the plate and cutting plastic use, however it's only through government, businesses and the public working together that we will protect our environment for the next generation – we all have a role to play in turning the tide on plastic.

There are over 150 million tonnes of plastic in the world's oceans and every year one million birds and over 100,000 sea mammals die from eating and getting tangled in plastic waste.

Today's announcement is the latest move in the government crackdown on plastic, following the plastic [microbeads ban](#) hailed as one of the world's strongest bans, the 5p plastic bag charge – [which has led to 9 billion fewer bags distributed](#), and last month's pledge to introduce a [deposit return](#)

[scheme](#), or DRS, for single use drinks containers, including bottles and cans.

It sits alongside the [25 Year Environment Plan](#) commitment to eliminate avoidable plastic waste. The Treasury has also launched a call for evidence on how charges and changes to the tax system could be used to reduce single use plastics.
