

News story: MMO announce 2018 panel dates for the EMFF scheme in England

Panels are required to consider applications over £100,000.00 and four panels will be held in 2018 giving applicants the maximum opportunity to apply for EMFF funding. Since the launch of the scheme in January 2016 there has been significant uptake so far. This has resulted in some funding areas becoming under pressure in 2018.

The 2018 panel dates are as follows:

- The first panel will be held on 21 March 2018. Applicants are asked to ensure their applications reach the MMO by 19 January 2018.
- A second panel will take place on 13 June with a deadline for applications of 13 April.
- A third panel will convene on 5 September with an application deadline of 30 June.
- A final panel will take place on 21 November with an application deadline of 14 September.

Commenting on the panels, MMO Director of Finance, EU and Licensing, Michelle Willis said:

“It’s imperative that people apply for funding by the panel dates and because of the scheme’s success, some funding areas will come under pressure during 2018. We want to ensure enough funding is available for projects to take place so we are asking for those interested to submit their applications as quickly as possible.

“The EMFF Scheme is very diverse and whilst we have received a wide range of projects since launch, we continue to welcome projects in 2018 including innovation projects, scientific – based projects and those with an emphasis on marine conservation.

“I would urge people to note the deadline dates for panel applications and take the time to submit applications which are of the highest possible quality to maximise the chances of application success.”

Please visit the MMO website for [guidance and information on how to make an application.](#)”

News story: Northumberland Armed

Forces Forum

VAPC logo. All rights reserved

This well attended event drew over 30 representatives from across the region and reflected the interest in supporting the armed forces community in the region.

The issues of alcohol and veterans was covered by a presentation by Dr Sarah Wigham, Newcastle University, on research funded by Forces in Mind Trust. Her work dealt with evidence based interventions to tackle alcohol abuse in the veteran community. This multinational project drew heavily upon research from around the world and explored how this work can be adapted to meet the needs of veterans.

The forum discussed the complex issues relating to alcohol problems and veterans and the how the Mess/NAFI culture has evolved and the effect of cheap alcohol on serving personnel.

The forum was the opportunity of the incoming Royal British Legion, Advice and Information Officer, Ms Louise Liddell to introduce herself to the community and to brief the community on the Legion's work in the Northumberland region.

The wider veteran support environment was explored, specifically there was an exploration of the Northumberland Outreach Worker Project by its representative Mr Jonny Harrison. Even though he had only been in post 10 weeks he was already working 25 cases, of which 70% involved mental health issues and described their project as being so busy they have had to advertise for another member of staff to help deliver services.

The new [Albermarle Barracks Military Wives Choir](#), formed a year ago and has had a very successful appearance at Hexham Abbey and St Nicholas Cathedral. This Choir was formed with the express purpose of creating a supportive community rather than an award-winning choir and is made up of for wives, fiancées, and co-habiting partners, who might otherwise feel isolated.

The choir is also open to women serving in the armed services and female veterans, plus and wives, daughters of veterans. It is not restricted to Albermarle and is open to all who qualify across the region. It is now one of more than 200 military wives choirs across the UK. The Albermarle choir was set up because the nearest ones were in Catterick and Edinburgh.

The forum was a very useful meeting that allowed the VAPC to meet with other service providers and is an important part of the board's engagement strategy.

Notice: HR9 6HB, Mr Jonathan Benbow: environmental permit issued

The Environment Agency publish permits that they issue under the Industrial Emissions Directive (IED).

This decision includes the permit and decision document:

- Operator name: Mr Jonathan Benbow
- Installation name: Woodhouse Fields Poultry Unit
- Permit number: EPR/TP3736MW/V005

The Environment Agency publish permits that they issue under the Industrial Emissions Directive (IED).

This decision includes the permit and decision document for:

- Operator name: Mr Adam Brown and Mrs Rachel Brown
- Installation name: Higher Ash Farm Poultry Unit
- Permit number: EPR/WP3033JY/A001

News story: £170m competition launched for new Institutes of Technology

Employers, education and training providers can now apply for a share of £170m to establish prestigious new Institutes of Technology (IoTs), which will specialise in delivering the higher level technical skills that employers need.

Today (15 December) the Department for Education has opened the application

window for employers, Higher Education and Further Education providers to apply for multimillion-pound capital funding, as outlined by the Education Secretary at last month's [Skills Summit](#).

IoTs will see businesses and education and training providers working together to deliver provision to learners that is highly sought after by employers, in technical disciplines, particularly STEM (science, technology, engineering and maths).

Education Secretary Justine Greening said:

Institutes of technology will play a vital role driving our skills revolution with business and unlocking the potential of our country's young people through better technical education. By bridging the country's skills gaps, these new institutions will drive growth and widen opportunity.

This Government continues to invest in developing our homegrown talent so British business has the skills it needs and so that young people can get the opportunities they want.

These new institutions will help tackle the skills gap at a local, regional and national level and extend opportunity to thousands of people.

IoTs are just one of the skills reforms outlined by the Secretary of State on the 30 November at the Department for Education's [Skills Summit](#) which brought together education experts and some of the country's top employers to forge a new alliance to deliver a skills revolution.

Today we can confirm our aim to achieve a network of IoTs across the country. We expect the first IoTs will be open in 2019.
