

[News story: UK takes world stage in fight against marine plastic](#)

Environment Minister Thérèse Coffey has set out how the UK is taking action to tackle marine litter and protect oceans from the effects of climate change at today's 'Our Ocean' conference in Malta.

Speaking in front of heads of state, ministers and NGOs from around the world, the Environment Minister pledged her support to help small island developing states with marine science, research and conservation projects – alongside setting out how the government is continuing the fight at home against the eight million tonnes of plastic that make their way into oceans each year.

The UK's ban on microbeads has been lauded as one of the toughest in the world and nine billion fewer plastic bags have been distributed since the government introduced a 5p charge. This week the government also issued a [call for evidence](#) on the benefits of reward and return schemes for plastic bottles in a bid to clean up our oceans.

Speaking from Malta, Environment Minister Thérèse Coffey said:

Around the world our oceans are suffering from the blight of plastic pollution and the impacts of climate change.

The UK continues to be a global leader in protecting oceans and marine life – our 5p plastic bag charge has taken nine billion bags out of circulation, our microbeads ban is one of the toughest in the world, and we are now exploring what more we can do to reduce the impact of plastic bottles.

But there is always more we can do – which is why I am meeting with my counterparts in Malta today to pledge my continued support for marine conservation and discuss how we can work together to protect our precious oceans and marine life for future generations.

The [Our Ocean Conference](#), held in Malta from 5-6 October, brings together heads of state, governments, industry and NGOs to discuss marine conservation and agree actions to protect seas and oceans around the world.

Alongside further funding under the [Commonwealth Marine Economies Programme](#) – which began in 2015 to help small island states make the most of their maritime assets and encourage sustainable economic growth – the Environment Minister also announced support for global initiatives to tackle plastic pollution.

These include joining the Global Partnership on Marine Litter – one of the UN's Sustainable Development Goals – as well as signing up to the Global

Ghost Gear Initiative, an alliance of the fishing industry, NGOs and government agencies working to solve the problem of lost and abandoned 'ghost' fishing gear that can trap sea life.

£5.2 million has also been granted to marine projects through the two most recent rounds of the Darwin Initiative and Darwin Plus grant schemes – helping to protect coral reefs, set up Marine Protected Areas, encourage sustainable fisheries and increase the resilience of coastal communities to climate change.

While in Malta, Minister Coffey also reiterated the government's commitment to creating a network of marine protected areas around the United Kingdom, alongside reaffirming £4.8 million to drive forward the creation of a 'blue belt' across the UK's Overseas Territories.

[Guidance: Storing waste sandbags at collection sites after a flood: RPS 168](#)

If you comply with the conditions of this regulatory position statement (RPS) you can store waste sandbags at designated temporary collection sites without an environmental permit.

Press release: 'Right Waste, Right Place' spot-checks on Thames Valley waste firms

A number of businesses across Berkshire and Buckinghamshire are on notice to comply with the law on waste disposal, after a series of unannounced checks by the Environment Agency on Tuesday 3 October.

Officers visited more than 100 sites and firms across the Thames Valley, and will be following-up on 10 illegal waste sites found during the day. The owners may face prosecution. Other premises were given advice and guidance to help them meet their legal requirements.

Firms are required by law to manage waste without a threat to the environment, such as not releasing anything other than waste water into the drainage network. The surprise inspections covered the removal of hazardous items, like chemicals and car batteries. Thames Water assisted the Environment Agency on pollution checks. Companies were also checked for having the correct environmental permit for their business.

Environment Agency staff were also on hand at DIY store Wickes in Slough, to offer free waste-handling advice to hauliers and homeowners, in order to reduce fly-tipping.

Mark Tucker, Installations Team Leader for the Environment Agency in the Thames Valley, said:

The Environment Agency works with business to make sure waste ends up in the right place, and may take more formal action where we believe a serious crime has been committed through illegal waste disposal.

Anyone who produces, carries, keeps, treats or disposes of waste has a duty of care to make sure it is managed correctly. The public can do their bit by only using a licenced waste carrier, or reporting any concerns on waste management to the Environment Agency on 0800 807060.

The 117 sites we inspected this week were under no illusion of their legal obligations on waste management. Mishandling waste, poorly-operated permitted sites and illegal waste activities can pose a threat to human health and the environment by contaminating land, polluting rivers and producing emissions from burning waste.

As well as breaking the law, illegal operations undermine the work done by legitimate firms.

Waste crime is a very serious issue for both local communities and the environment. The Environment Agency uses reports from industry and the public to build intelligence, and target those involved in organised environmental crime, and where their activities pose the greatest risk to the environment.

Handling of illegal waste can be reported anonymously to Crimestoppers, on 0800 555111. There are lots of signs that could suggest suspicious activity. These include:

- Out-of-hours activity at night, over weekends and during bank holidays
- Smoke caused by constant burning
- An increase in the number of lorries entering a site
- Waste going into a site but not coming out with increasing quantities of waste stockpiled on site
- Water pollution

The Environment Agency and local councils also investigate reports of fly-tipping.
