

## [News story: CNC officers return to their Mission](#)

All Civil Nuclear Constabulary (CNC) officers are now back to their home sites after Operation Temperer concluded and are fulfilling their Mission of protecting civil nuclear sites and nuclear material while in transit.

CNC Authorised Firearms Officers (AFOs) were deployed from every one of the 10 nuclear sites we protect, as well as from our training division. They were sent to eight different force areas and carried out a wide range of roles, including patrolling transport hubs like airports and train stations; joining Home Office AFO colleagues on patrol in Armed Response Vehicles; and protecting public events ranging from concerts to sports matches. While they were away supporting the national Op Temperer deployment, a large number of our AFOs remained protecting nuclear sites, with the support of the UK Armed Forces.

Chief Constable Mike Griffiths said: "Our officers were deployed to eight different force areas and couldn't have received a warmer welcome from their Home Office counterparts.

"As a national Counter Terrorism police force, our officers are highly skilled and patrol within 5km of their nuclear sites on a daily basis, however they really enjoyed the opportunity to interact with members of the public in situations they wouldn't ordinarily experience – such as patrolling in busy city centres, protecting iconic sites and providing a visible armed presence at concerts and sporting events, including the Liverpool and Manchester marathons at the weekend.

"As well as supporting the national operation, we carried on with business as usual at our sites, ensuring nuclear facilities and materials were as secure as they always are with the support of military personnel.

"I have nothing but admiration for all of the officers and members of the UK police forces who came together to protect the public in the wake of the horrific attack in Manchester last week and our thoughts remain with those who have lost loved ones or sustained injuries in the attack. As a force, we were proud to support the national policing effort and have been humbled by the messages of support we received from the public and our policing partners thanks to the role we played."

## [Press release: PM call with US](#)

## **President: 1 June 2017**

A Downing Street Spokesperson said:

President Trump called the Prime Minister this evening to discuss his decision to pull the US out of the Paris Agreement.

The Prime Minister expressed her disappointment with the decision and stressed that the UK remained committed to the Paris Agreement, as she set out recently at the G7.

She said that the Paris Agreement provides the right global framework for protecting the prosperity and security of future generations, while keeping energy affordable and secure for our citizens and businesses.

The President made clear that the door remains open to future US involvement in the Agreement.

The Prime Minister and President agreed on the importance of continued cooperation on wider energy issues.

# Judicial Review Case Management

News story

Registered OISC immigration advisers can apply to do Judicial Review Case Management work

From 1 June 2017, OISC advisers registered at Level 3 who are interested in applying for authorisation in Judicial Review Case Management (JRCM) may apply to carry out this work. A Practice Note on understanding the work allowed can be found [here](#).

JRCM work will include:

- Advising on the merits of judicial review proceedings and any costs or risks involved
- Explaining the various stages associated with a judicial review application
- Drafting written instructions for counsel to represent a client in proceedings
- Assisting in the gathering of information and documents to support the claim
- Supporting in the preparation of skeleton arguments and the substantive hearing bundle
- Instructing where an urgent application is required

To undertake this work OISC registered advisers must be authorised by the Commissioner in the category of Judicial Review Case Management; and be permitted by the Bar Standards Board to instruct a barrister to undertake the litigation and advocacy element of an immigration judicial review through their Licensed Access Scheme.

Full details of the application process (or Guidance) and the Competence

Statement specifically designed for applications for JRCM (contained in the Applications document) are available [here](#).

If you are interested the process for applying will reflect the current process of applying for a new category of authorisation. You will be asked to complete and submit a Competence Statement outlining your experience and training in the area. Applications will be decided based on the information and evidence you provide. We will not carry out a formal written assessment on JRCM at this time.

## [Speech: The British are here – A celebration of UK participation at Exponor 2017](#)

We are here at this spectacular venue, courtesy of FCAB (Ferrocarri de Antofagasta a Bolivia), surrounded by some past British innovation and technology. At Exponor 2017 we are celebrating and promoting some current and future British innovation and technology.

Innovation and technology which we believe can help meet some of the needs of Chile's mining sector. Two years ago we met here in Antofagasta against the background of a tough year for the copper market and slowing global demand. The price of copper is, of course, crucial to Chile's economy. Price analysis and relationship to investment was a major theme of this morning's seminar. A major theme of Exponor 2017 overall is innovation and technology and the role it has to play in transforming the mining sector. The industry is focused on finding ways to improve production efficiency, reduce costs, and to create sustainable partnerships to drive growth.

The mining industry has historically been a strong part of the bilateral relationship between Chile and the UK. 70% of British investments in Chile are in the mining sector, in large part responsible for the UK being one of the largest investors in Chile. Chile is home to a number of important British or UK-linked companies. A priority for the Embassy is to involve a

further range of British expertise, innovation, products and services contributing to mining and the mining supply chain here in Chile.

Chile is an attractive country in which to do business. We believe that British expertise makes the UK an excellent supplier that seeks to use innovation and technology to meet pressing mining sector needs such as energy, equipment, efficiency and education.

The proof of this is the constant participation of British companies in the successive Exponor and Expomin mining fairs where the whole spectre of services and products are represented: from environmental monitoring, energy, through mining security, logistics, water treatment, mineral processing, operation efficiency, engineering to construction and satellite technologies.

Here at Exponor 2017 – we have:

- Aggreko – delivering innovative power and cooling systems for every stage of the lifecycle of the mine.
- EHS Data – with a world leading environmental data management solution.
- FMC – Friction Marketing Company – with innovative materials for equipment manufacturers in the earthmoving and mining equipment industry.
- LMK Thermosafe – a world leader in heating solutions for industrial containers.
- PacificTek – manufacturers of Concrete Canvas, a flexible fabric, that hardens on hydration to form a durable, concrete layer.
- Satellite Applications Catapult – making use of satellite based technologies and data, including with regard to environmental and social impact issues for the mining industry.
- Turner and Townsend – a services company with global expertise addressing programme, project and cost management.
- And British Airways, with a raffle to win a return ticket, to celebrate the new direct flight from Santiago to London.

And I hope we will also see many of you at Chile Day, 29/30 June in London. A great opportunity to promote investment possibilities here in Chile.

Our commercial team at the British Embassy continues to work to highlight the many opportunities in Chile to companies in the UK; and to highlight British expertise to help address some of the challenges in the mining industry

- How do you assess the geology, develop the extraction techniques, assess the environmental impacts, analyse the lifetime of a mine – we have the expertise, innovation and technology.
- How do you increase efficiency and optimise process engineering in the lifecycle of the mine – we have the expertise, innovation and technology.
- How do you improve energy efficiency and optimise water demands – we have the expertise, innovation and technology.
- How do you capitalise on and diversify from new opportunities, such as lithium – we have the expertise, innovation and technology.
- How do you project manage, optimise cost control and manage the supply

chain – we have the expertise, innovation and technology.

- How do you transform an industry, its culture and its working practices – we have the expertise, innovation and technology.
- How do you ensure you have all the regulatory standards, and financial and legal services in place – we have the expertise, innovation and technology.
- How do you do a different sort of mining – mining the data that can transform the mining industry – we have the expertise, innovation and technology.
- How do you inspire, train and educate the next generation – and for that some of the best universities and colleges in the world.

We look forward to further building the partnership between UK and Chile, in transforming trade, in increasing investment and in linking people. We also work closely with our Embassy colleagues across Latin America to encourage UK participation in the mining sector. Please make the most of this evening to build some of those links – talk to the British Companies, here to participate in the largest mining fair in Latin America. Talk to the Embassy team here, from Santiago, who have helped to organise the UK stand and this reception, Please come and visit our stand in the copper pavilion. We would be delighted to talk to you, about how you see the mining sector in Chile and how British expertise can help contribute to the next phase of growth.

Fiona Clouder – Her Majesty's Ambassador
