

# Company fined after worker is crushed by car while praying

A Liverpool motor vehicle repair company has been fined after a car fell from a two-post car vehicle lift onto a worker who was praying on his break.

The court heard how the man suffered multiple serious fractures in the incident at a garage in the Kensington area of Liverpool on 23 November 2022.

The 56-year-old from Toxteth, Liverpool, was working as a mechanic at the time, at the Marvin Street premises of Car Spa & Tyres Ltd. Mr Hamad was working on a vehicle which had been raised on a two-post lift. Neither swivel arm on one of the lifting columns was locked into position, and as Mr Hamad took a break to pray, the car fell from the lift, crushing him beneath and causing multiple serious fractures.

Garage and prayer mat

He was taken to Aintree Hospital, where he was found to have a broken leg, three broken bones in his spine, five broken ribs and a broken pelvis.

HSE guidance on working safely under motor vehicles being repaired: [Working under vehicles – HSE](#)

The man spent four months in hospital because of his injuries. Almost two years later, he has been left highly dependent upon his wife, and others, to carry out even simple daily tasks. It is unlikely he will be able to work again.

An investigation by the Health and Safety Executive (HSE) found that Car Spa & Tyres Ltd, had failed to put in place a safe system of work, or to sufficiently train their staff, in the proper, and safe operation of the lifting equipment.

Lifting equipment and car

The company, of the Kensington area of Liverpool, were found guilty by the jury to breaching regulation 2(1) of the Health and Safety at Work Act 1974. It was fined £40,000 and ordered to pay £20,000 in costs at a hearing at Liverpool Magistrates' Court on 25 June 2025.

After the hearing, HSE inspector David Bellis said:

"This was a very serious incident, and it is fortunate nobody was killed as a result.

"If Mr Hamad had been suitably trained in the use of the two-post lift, the company had a suitable system of work in place and the swivel arms had been positioned correctly and locked into place this incident would have been avoided.

"The HSE take all accidents seriously, especially those that could have been easily prevented, and will not hesitate to prosecute, whenever it is appropriate".

The prosecution was brought by HSE enforcement lawyer Karen Park and paralegal officer Gabrielle O'Sullivan.

#### **Notes to Editors:**

1. The Health and Safety Executive (HSE) is Britain's national regulator for workplace health and safety. We prevent work-related death, injury and ill health through regulatory actions that range from influencing behaviours across whole industry sectors through to targeted interventions on individual businesses. These activities are supported by globally recognised scientific expertise. [hse.gov.uk](http://hse.gov.uk)

## Suffolk meat producer fined after worker loses finger

- Company's own procedures on meat cutting were not followed
- Training only provided in English despite multi-national workforce

A Suffolk-based meat producer has been fined £140,000 after one of its workers lost part of his finger while cutting a pig tail.

The man had been working for pork producer C & K Meats Limited at its site in Potash Lane on Mid Suffolk Business Park on 12 April 2022. The Ukrainian national, who was 31 at the time, had been instructed to remove pigs' tails using hydraulic cutters, which were not designed for the task.

The man had been instructed to remove pigs' tails using hydraulic cutters, which were not designed for the task

However, he caught his left index finger in the cutting mechanism and severed it. He was taken to hospital where he received further treatment including the removal of more of his finger.

An investigation by the Health and Safety Executive (HSE) found the company failed to ensure the health, safety and welfare at work of all its employees by providing equipment that was not suitable for the task.

Internal procedures were in place which identified hydraulic cutters were only to be used to remove pigs' legs and that trained butchers would undertake the removal of pigs' tails with a knife. However, the company failed to implement them.

The company failed to implement its own procedures

Training provided for the process of removing pigs' tails was also only provided in English, including for migrant workers for whom English may not have been their first language.

Employers have a legal responsibility to provide information, instruction, training and supervision in an understandable format for all workers, irrespective of their national origins, first language, or literacy. You can read more about HSE guidance for the food and drink industry here: [Food and drink industry case studies – HSE](#).

C & K Meats Limited of Oak House Heyford Close, Aldermans Green Industrial Estate, Coventry, England, pleaded guilty to breaching Section 2 (1) of the Health and Safety at Work etc Act 1974. The company was fined £140,000 and ordered to pay £5,513.47 in costs at Peterborough Magistrates' Court on Friday 20 June 2025.

HSE inspector Jessica Flint said: "This case identified multiple failures by this company while undertaking the very common task of pork processing.

"Trained butchers on site could have safely removed pigs' tails using a knife, instead of operatives being instructed to use unsuitable hydraulic cutters."

"The food industry should protect all its staff. This includes its more vulnerable workers, by ensuring clearly understandable training, instruction and information is provided, including to non-English speakers, and that only

the most suitable equipment is used for its processes.”

This HSE prosecution was brought by HSE enforcement lawyer, Samantha Crockett and paralegal officer Melissa Wardle.

## **[Building firm fined after house collapse injures four](#)**

- Two workers were on first floor when collapse happened.
- “Lucky nobody was killed”, says HSE inspector.
- HSE guidance is available.

A London construction company has been fined £50,000 after four men were injured – two seriously – when the first floor of a house collapsed during building works.

Aryn Stones Ltd had been contracted to build a new domestic property in Hampstead. On 31 May 2022, remedial works were being carried out on a partially built beam-and-block floor, when it collapsed, taking two of the workers down with it.

Two men suffered serious injuries following the collapse

The two men include a welder, who is now 62, and a 31-year-old bricklayer. They both sustained life-changing injuries, while two other men who were standing at ground level were injured by falling concrete.

Work on the build began in March 2021 but by February the following year, engineers who inspected the property identified errors with the connections of the structural steel beams. This prompted the remedial works that led the structure to collapse. That came about when the welder was using an oxyacetylene torch to cut a steel beam supporting the first floor. However, at the same time, another worker had been removing some Acrow props that were supporting the beam.

Remedial work was being carried when a steel beam and a block of the first floor collapsed

An investigation by the Health and Safety Executive (HSE) found that Aryn Stones Ltd had failed to ensure the structure did not collapse while it was in a state of temporary weakness. The company also failed to put any measures in place to manage the temporary remedial work being carried out on the steel

connections. They also failed to take all practicable steps to prevent danger to any person while the building was in a temporary state of weakness.

HSE guidance on [managing health and safety in construction](#) and the [management of temporary works](#) is available.

Aryn Stones Ltd, of Percy Road, London were found guilty of breaching Regulation 19(1) of the Construction (Design and Management) Regulations 2015. The company was fined £50,000 and was ordered to pay £39,000 costs following a two-day trial before City of London Magistrates' Court on 18 June 2025.

The company failed to put any measures in place to manage the temporary remedial work being carried out

After the hearing, HSE inspector Lucy Ellison-Dunn said: "Although two men were seriously injured, it was lucky nobody was killed.

"This was a completely avoidable incident had a system for the management of temporary works been in place. The company should have taken precautions to protect people from the risk of collapse.

"Everyone working in construction has a responsibility to ensure that everyone on a building site is safe."

The investigation was also carried out by HSE inspector Alexander McIlwraith.

This prosecution was brought by HSE enforcement lawyer Samantha Crockett and supported by HSE Paralegal Officer Sarah Thomas.

## Oil and gas operator following incident on North Sea platform

- Water rose to workers' knees before emergency stop
- Incident was "terrifying", says HSE inspector

An oil and gas operator has been fined £300,000 after three crew members descended into a water filled lift shaft on a floating platform in the North Sea causing them to become partially submerged.

The workers had been descending in a lift located in one of the platform legs on the FPF-1 facility during a night shift on 10 December 2020 when the water started to flood into the lift before they reached the bottom of the shaft. The trio were knee-deep in water by the time the lift was able to be stopped by the workers via the emergency button.

Figure 7 – Location of Column D4 on FPF-1

### The FPF-1 Platform

Ithaca Energy (UK) Limited, the owner of FPF-1, pleaded guilty to safety failings at a hearing at Aberdeen Sheriff Court on Thursday, 12 June 2025.

An investigation by the Health and Safety Executive (HSE) found the three men had been tasked with carrying out inspection work at the base of one of the facility's sub-sea columns. During preparations to clear the inspection site of standing water beforehand, failings of hardware and incorrect operating

procedures caused the bottom of the lift shaft to commence filling with water. Due to a lack of water alarms in the bottom of the lift shaft the control room was unaware that water was filling the shaft.

The lift shaft had filled with sea water and no alarm system was in place

As the three men descended in the lift, they experienced a ‘rush of air’ before their fears of something being wrong were confirmed when the base of the lift made contact with the water. The three men were able to press an emergency stop button and returned safely to the main deck, with none of them sustaining any injuries.

The HSE investigation found that water marks on the lift door revealed it had reached a level of just under 1.5 metres before the lift was stopped and returned to surface. Ithaca’s own investigation determined that the water level could have actually reached more than three metres, meaning the men would have found it difficult to escape through the top hatch of the lift if the workers had used the lift later and/or had not been successful in bringing the lift to a halt immediately.

HSE issued Ithaca with an improvement notice and work in confined spaces was stopped by the company until February 2021 to allow a full review to take place.

Figure 11 – Lift Entrance and Water-tight Door in P-M-12

Water marks on the lift door indicated it had reached a height of nearly 1.5 metres

Ithaca Energy (UK) Limited of Queens Road, Aberdeen pleaded guilty to breaching The Provision and Use of Work Equipment Regulations 1998, 30 Regulation 4(1) and the Health and Safety at Work etc. Act 1974, Section 33(1)(a). The company was fined £300,000.

HSE inspector Ian Chilley said: “This was a terrifying incident for the workers involved, we are just thankful that no physical harm came to them.

“This fine should send a message and reminder to those operating offshore

facilities for them to be extra vigilant.

“It was only a matter of good fortune that this incident didn’t result in serious injury, or worse.”

When passing sentence, the sheriff observed the case marked ‘another reminder of the need for rigorous adherence to health and safety in the oil and gas industry’.

## **Director spared jail as two companies fined following roofer death**

- Young roofer was on just his second day on the job.
- Falls from height remain one of the leading causes of workplace death and HSE guidance is available.

A director has been given a suspended jail sentence and two companies fined after a young man on just his second day on the job fell to his death at a premises in Walsall.

Adam Brunskill, 22, had been part of a team of four men working on the roof of Bestway Wholesale in Bloxwich Lane, near Reedswood. On 14 July 2020, he fell through an unprotected glass-wire skylight to the concrete floor approximately 23-feet below. He sustained a severe brain injury and died in hospital the following day.

The work was being carried out at Bestway Wholesale in Bloxwich Lane in Walsall

It had only been Adam's second day working as a roofer on the project to install over-cladding to the large industrial unit.

Wayne Clarey, the director of Wayne Clarey Roofing & Cladding Limited, was given a six-month custodial sentence, suspended for 18 months. His company was fined £45,000, while principal contractor Proclad Developments Limited was fined £400,000.

Working at height remains one of the leading causes of workplace injury and death and HSE has detailed guidance on [working safely at height](#).

Adam Brunskill fell through an unprotected glass-wire skylight

An investigation by the Health and Safety Executive (HSE) found that this was a very preventable incident. The skylights could have been covered or safety netting installed below.

- Proclad (Developments) Limited of Snail Hill, Rotherham pleaded guilty to breaching Section 3 (1) of the Health and Safety at Work etc. Act 1974 and Regulation 9 (2) of the Work at Height Regulations 2005 and have been fined £400,000 and ordered to pay costs of £9,089.
- Wayne Clarey Roofing & Cladding Limited of High Escombe, Bishop Auckland pleaded guilty to breaching Section 2 (1) of the Health and Safety at Work etc. Act 1974 and Regulation 9 (2) of the Work at Height Regulations 2005 and have been fined £45,000 and ordered to pay costs of £5,000.

- Director Wayne Clarey of High Escombe, Bishop Auckland pleaded guilty to breaching Section 2 (1) of the Health and Safety at Work etc. Act 1974 and Regulation 9 (2) of the Work at Height Regulations 2005 and was sentenced to 26 weeks imprisonment suspended for 18 months.

HSE inspector Gareth Langston said: “The collective failures of those responsible for site safety in this case has cost a young man his life.

“Adam Brunskill was at the very beginning of his career but was not kept safe.

“When working on fragile roofing, or where skylights are in place on a metal roof, safety netting is essential.

“Had these measures been put in place Adam would still be alive.”
