

# **Buildings Energy Efficiency (Amendment) Ordinance 2025 to be gazetted on Friday**

The Buildings Energy Efficiency (Amendment) Ordinance 2025 (the Ordinance) and its Buildings Energy Efficiency (Amendment) Ordinance 2025 (Commencement) Notice (the Notice) will be published in the Gazette on Friday (June 20).

A spokesman for the Environment and Ecology Bureau said, "The Ordinance not only improves the buildings energy efficiency management regime of Hong Kong by extending the scope of energy efficiency regulation to more types of buildings, shortening the intervals of energy audits and disclosing technical information in energy audit reports, but also helps to achieve a win-win scenario of saving electricity costs for buildings, reducing carbon emissions, and boosting the development of the green economy, thereby assisting Hong Kong to achieve carbon neutrality by 2050."

The Ordinance will come into effect in two stages. The Notice will be tabled by the Government before the Legislative Council at its sitting on June 25. Upon the completion of negative vetting, the amendments for updating the qualifications eligible for registration as Registered Energy Assessors will commence first on September 20, 2025 (i.e. three months after the gazettal of the Ordinance), to enable professionals' early registration. The remaining provisions will commence on September 20, 2026 (i.e. 15 months after the gazettal of the Ordinance), to allow adequate time for the sectors to make necessary preparations for compliance with the new regulations. The Electrical and Mechanical Services Department will continue the promotion and publicity efforts to inform building owners of the latest statutory requirements in a timely manner, and provide technical support to assist them in complying with the new requirements.

The spokesman added, "Upon the full implementation of the Ordinance, it is estimated that an additional 500 million kilowatt-hours of electricity, equivalent to the annual electricity consumption of about 150 000 three-person households, could be saved in 2035."
