

CFS urges public not to consume a kind of French cheese suspected to be contaminated with Listeria monocytogenes

The Centre for Food Safety (CFS) of the Food and Environmental Hygiene Department today (April 16) urged the public not to consume a kind of cheese imported from France due to possible contamination with Listeria monocytogenes, a pathogen. The trade should stop using or selling the product concerned immediately if they possess it.

Product details are as follows:

Product name: Cheese Brillat Savarin
Brand: Bordier
Place of origin: France
Importer: Classic Fine Foods (Hong Kong) Ltd
Lot No.: 352702, 352203, 352802 and 352803
Best-before dates: April 12 to May 7, 2019

"The CFS received a notification from the Rapid Alert System for Food and Feed (RASFF) of the European Commission that the above-mentioned product might have been contaminated with Listeria monocytogenes and was being recalled. According to the information provided by the RASFF, a local importer, Classic Fine Foods (Hong Kong) Ltd, had imported some of the affected product into Hong Kong," a spokesman for the CFS said.

The CFS immediately contacted the importer concerned for follow-up. Preliminary investigation found the importer had imported 11 pieces of the affected product and all of them had been distributed. The importer has initiated a recall according to the CFS' instructions. Enquiries about the recall can be made to the importer's hotline at 2612 2066 during office hours.

"Listeria monocytogenes can be easily destroyed by cooking but can survive and multiply at refrigerator temperature. Most healthy individuals do not develop symptoms or only have mild symptoms like fever, muscle pain, headache, nausea, vomiting or diarrhoea when infected. However, severe complications such as septicaemia, meningitis or even death may occur in newborns, the elderly and those with a weaker immune system. Although infected pregnant women may just experience mild symptoms generally, the infection of Listeria monocytogenes may cause miscarriage, infant death, preterm birth, or severe infection in the newborns," the spokesman said.

The spokesman urged consumers not to consume the affected product if they have bought any. The trade should also stop using or selling the product

concerned immediately if they possess it.

The CFS will alert the trade to the incident, and will continue to follow up and take appropriate action. Investigation is ongoing.
