

CHP investigates confirmed Mpox case

The Centre for Health Protection (CHP) of the Department of Health (DH) said today (May 24) that it is investigating a confirmed Mpox (also known as Monkeypox) case, and urged the public to heighten vigilance and avoid close physical contact with persons suspected of contracting Mpox. Meanwhile, high-risk target groups are advised to receive Mpox vaccination.

The case involves a 27-year-old male patient with good past health. He had developed skin rash since May 19 and visited a general practitioner on the same day. He attended Princess Margaret Hospital yesterday (May 23) and was admitted on the same day. He is now in stable condition.

According to the patient, he had no travel history during the incubation period. He had high-risk contacts during his visit to Cloakroom Sauna, a recreational premises on Observatory Road, Tsim Sha Tsui, during the incubation period. An initial investigation revealed that no epidemiological linkages between this case and other confirmed cases recorded in Hong Kong earlier have been found so far. The CHP is continuing its epidemiological investigations of the case and will report the case to the World Health Organization.

The CHP appeals again to high-risk target groups to receive Mpox vaccination with a view to lowering the risk of infection or the possibility of having more severe symptoms after infection. Persons who experience Mpox symptoms (including rashes, fever, chills, swollen lymph nodes, exhaustion, muscle pain, and severe headaches) or suspect themselves of being infected are advised to seek medical attention and receive treatment at once, and they should not engage in activities with others during which other people may have contact with their skin rash or body fluids. Members of the public should maintain good personal and hand hygiene to prevent virus transmission or infection through contact. They should also avoid close physical contact with persons or animals suspected of infection.

The CHP had earlier set up an Mpox telephone hotline (2125 2373). The hotline operates from Monday to Friday (excluding public holidays) from 9am to 5pm, which enables those who suspect or are concerned they have had high-risk contact with confirmed patients, in particular men who have sex with men or those who have sexual practices with strangers, to make enquiries and receive relevant health advice. The CHP appeals to the public who have visited the above-mentioned recreational premises within the past three weeks, and those who suspect they have had high-risk contact with confirmed patients, to call the Mpox telephone hotline as soon as possible.

The DH provides vaccination service for high-risk groups of MPox. The following high-risk target groups can receive Mpox vaccination on a voluntary basis:

1. Individuals with high-risk sexual practices, e.g. having multiple sexual

- partners, sex workers, or having a history of sexually transmitted infection within the past 12 months;
2. Healthcare workers responsible for caring of patients with confirmed Mpox;
 3. Laboratory personnel working with zoonotic pox viruses; and
 4. Animal care personnel with high risk of exposure in case of Mpox occurrence in animals in Hong Kong.

High-risk target groups can receive Mpox walk-in vaccinations at all of the DH's Social Hygiene Service Clinics (SoCHS) (namely Chai Wan SoCHS, Wan Chai Male SoCHS, Wan Chai Female SoCHS, Yau Ma Tei Male SoCHS, Yau Ma Tei Female SoCHS, Yung Fung Shee SoCHS, Fanling SoCHS and Tuen Mun SoCHS). Further information of the clinics including their locations is available at www.dh.gov.hk/english/tele/tele_chc/tele_chc_shcf.html and www.dh.gov.hk/english/tele/tele_chc/tele_chc_shcm.html.

Meanwhile, the DH's Kowloon Bay Integrated Treatment Centre and Yau Ma Tei Integrated Treatment Centre, and the Hospital Authority's Special Medical Clinics at Queen Elizabeth Hospital and Princess Margaret Hospital will also provide Mpox vaccination services for their clients.
