

CHP investigates locally acquired SARS-CoV-2 virus cases with 2 016 cases tested positive by nucleic acid tests and 6 814 cases by RATs as well as 657 imported cases

The Centre for Health Protection (CHP) of the Department of Health (DH) today (December 4) announced the latest epidemic situation of COVID-19. As of 0.00am, December 4, the CHP was investigating 8 830 additional locally acquired cases that tested positive for the SARS-CoV-2 virus, comprising 2 016 cases that tested positive by nucleic acid tests (1 062 confirmed cases, 829 asymptomatic cases and 125 cases with pending status) and 6 814 cases that tested positive by rapid antigen tests (RATs) in the past 24 hours.

Separately, 657 additional imported cases were reported, comprising 544 cases that tested positive by nucleic acid tests (115 confirmed cases, 400 asymptomatic cases and 29 cases with pending status) and 113 cases that tested positive by RATs. Among the additional imported cases, 370 of them involved samples at the airport, 217 involved samples during Day 1 to Day 3, and the remaining 70 involved samples during Day 4 to Day 7.

Hong Kong has recorded a total of 1 063 100 and 1 094 876 cases that have tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus so far.

The CHP is continuing with epidemiological investigations of the cases. Please refer to the Annex and the "COVID-19 Thematic Website" (www.coronavirus.gov.hk) for more information.

The CHP has been closely monitoring the situation of positive cases involving mutant strains by genetic analysis. As of 0.00am, December 4, the DH's Public Health Laboratory Services Branch (PHLSB) had identified 225 cases of sub-lineage XBB, six of XBD, eight of BA.2.75.2, seven of BA.4.6, 13 of BF.7 and 36 of BQ.1.1 among imported cases in Hong Kong, while 104 cases of sub-lineage XBB, 18 of XBD, one of BA.2.75.2, four of BF.7 and 121 of BQ.1.1 have also been detected among local cases.

Among the specimens received by the DH's PHLSB during November 25 to December 1 for verification testing of local cases, 0 per cent and about 71.32 per cent of them (seven-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5 (including suspected cases) of the Omicron mutant strain respectively.

In addition, as of 0.00am, December 4, a total of 10 593 death cases that had tested positive for the SARS-CoV-2 virus during the fifth wave (since December 31, 2021) were recorded, with 10 497 and 92 deaths reported

from the Hospital Authority and public mortuaries respectively as well as four deaths reported from private hospitals. Hong Kong has so far recorded a total of 10 806 death cases that tested positive for the SARS-CoV-2 virus.

Furthermore, among the earlier cases by nucleic acid tests reported, there were cases (including pending cases) that were changed to confirmed, asymptomatic or re-positive cases. As of yesterday (December 3), the total number of confirmed cases was 462 800, while the figures for asymptomatic cases, re-positive cases and pending/unknown cases recorded since January 1 were 350 707, 31 and 247 002 respectively.

The spokesman for the CHP said that COVID-19 vaccines are highly effective in preventing severe cases and deaths from the SARS-CoV-2 virus. They can provide effective protection to those vaccinated in preventing serious complications and even death after infection. People who have yet to receive vaccination, especially senior citizens, chronic patients, children and other immunocompromised persons who face a higher chance of death after COVID-19 infection, should get vaccinated as early as possible for self-protection and to reduce the risk of falling seriously ill and death should they get infected.

The CHP appeals to the community to keep on maintaining personal hygiene and complying with social distancing measures in order to jointly contain the risk of virus transmission. The spokesman reminded members of the public that they can call various hotlines to make enquiries on COVID-19 (www.coronavirus.gov.hk/eng/index.html#hotline).
