

CHP investigates seven additional cases of novel coronavirus infection

The Centre for Health Protection (CHP) of the Department of Health (DH) announced that as of 8pm today (February 11), the CHP is investigating seven additional cases of novel coronavirus infection, taking to 49 the number of confirmed cases so far in Hong Kong.

The first case involves a 59-year-old man with underlying illness who lives in Block 3, Island Resort, Siu Sai Wan. He developed fever, cough and shortness of breath since February 2. He consulted a private doctor on February 6 and sought medical attention at St Paul's Hospital's Outpatient Department on February 9. He sought treatment at Pamela Youde Nethersole Eastern Hospital (PYNEH) yesterday (February 10) and was admitted for isolation and management on the same day. His respiratory sample was tested positive for novel coronavirus. He is now in a stable condition. According to the patient's information, he had no travel history during the incubation period. His close contacts, namely his wife, daughter and domestic helper are asymptomatic and quarantine will be arranged.

The second case involves a 60-year-old woman who is the colleague of the 68-year-old male patient of the 30th case confirmed on February 9. The patient has good past health and lives in Tung Ping House, Lei Tung Estate, Ap Lei Chau. She developed cough since February 1 and consulted a private doctor on February 2. She sought treatment at Ruttonjee Hospital on February 10 where she was admitted for isolation and management. Her respiratory sample was tested positive for novel coronavirus. She is in stable condition. According to the 60-year-old female patient's information, she had no travel history during the incubation period. Her son, daughter-in-law and granddaughter who lived with her are asymptomatic and quarantine will be arranged.

The third case involves a 71-year-old man with underlying illness who lives in Po Yan House, Po Lam Estate, Tseung Kwan O. He developed fever, cough and shortness of breath since February 5. The patient sought treatment at Tseung Kwan O Hospital on February 10 where he was admitted for isolation and management and was then transferred to United Christian Hospital on the same day. His respiratory sample was tested positive for novel coronavirus. He is in stable condition. According to the patient's information, he had no travel history during the incubation period. His wife who lived with him is asymptomatic and quarantine will be arranged.

The fifth case involves a 66-year-old man with underlying illnesses who lives in Leung Tin Tsuen, Tuen Mun. He developed sore throat since January 31, chills and cough since February 4 and fever since February 7. He consulted two private doctors between February 1 and 10. The patient sought treatment at Tuen Mun Hospital (TMH) on February 10 where he was admitted for isolation and management. His respiratory sample was tested positive for

novel coronavirus. He is in stable condition. He had no travel history during the incubation period. His wife and mother who lived with him are asymptomatic and quarantine will be arranged.

The other three additional cases are related to the confirmed case (the 42th case, 62-year-old female patient) in Hong Mei House, Cheung Hong Estate announced yesterday. The patients involved the 37-year-old son and 37-year-old daughter-in-law of the 62-year-old female patient, as well as the father of her daughter-in-law who is aged 75.

The 37-year-old male patient developed fever and cough since January 30 and consulted a private doctor on the same day. He consulted another private doctor on February 3 and 5. The 37-year-old female patient developed fever, cough and sore throat since February 2 and consulted a private doctor on the next day. The couple have good past health and reside with the 62-year-old female patient. They were sent to Princess Margaret Hospital (PMH) yesterday for isolation and management. Their respiratory samples were tested positive for novel coronavirus. They are in stable condition. They had no travel history during the incubation period.

The 75-year-old patient lives in Tin Chak House, Tin Wan Estate, Aberdeen. He developed fever and cough since February 3 and consulted private doctors on February 3, 7 and 10 respectively. He sought medical attention at Queen Mary Hospital yesterday. His respiratory sample was tested positive for novel coronavirus and is in a stable condition. The patient had no travel history during the incubation period. His wife, his son and two daughters who lived with him are asymptomatic and quarantine will be arranged.

A spokesman for the CHP said, "According to our preliminary epidemiological investigations, some of the confirmed cases are locally infected. The CHP strongly urged the public to maintain at all times strict personal and environmental hygiene which is key to personal protection against infection and prevention of the spread of the disease in the community."

The spokesman said, "On the personal level, members of the public should wear a surgical mask when having respiratory symptoms, taking public transport or staying in crowded places. They should also perform hand hygiene frequently, especially before touching the mouth, nose or eyes. The public should go out less and reduce social activities, and maintain appropriate social distance with other people as far as possible."

"As for household environmental hygiene, members of the public are advised to maintain drainage pipes properly and regularly pour water into drain outlets (U-traps); after using the toilet, they should put the toilet lid down before flushing to avoid spreading germs."

The CHP will report the cases to the World Health Organization, National Health Commission, Health Commission of Guangdong Province and Health Bureau of Macao.

The CHP's epidemiological investigations and relevant contact tracing on the confirmed cases are ongoing. The CHP is also closely monitoring and following up on the contact tracing of relevant confirmed cases in the Mainland and overseas. Quarantine will be arranged for close contacts while medical surveillance will be arranged for other contacts. For the progress on the contact tracing of the cases, please see annex.

The CHP has set up a hotline (2125 1122) for public enquiries. The hotline operates from 8am to midnight daily. As at 4pm today, a total of 10 672 calls were received.

A dedicated webpage (www.gov.hk/ncv) has been set up by the CHP. Information including the latest local situation, list of buildings and list of flights/trains/ships relevant to the confirmed cases, countries/areas with reported cases as well as health advice and a "Novel Coronavirus Infection Local Situation Interactive Map Dashboard" are available on the webpage to help the public grasp the latest updates.

To prevent pneumonia and respiratory tract infection, members of the public should always maintain good personal and environmental hygiene. They are advised to:

- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including hand hygiene before wearing and after removing a mask;
- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes; after touching public installations such as handrails or door knobs; or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a liter of water into each drain outlet (U-traps) to ensure environmental hygiene;
- After using the toilet, put the toilet lid down before flushing to avoid spreading germs;
- Wash hands with liquid soap and water, and rub for at least 20 seconds. Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an effective alternative;
- Cover your mouth and nose with tissue paper when sneezing or coughing. Dispose of soiled tissues into a lidded rubbish bin, then wash hands thoroughly; and
- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.

The public should take heed of the health advice below when travelling outside Hong Kong:

- Do not travel to Hubei Province where community transmission of novel coronavirus is occurring;

- Avoid close contact with persons with fever or respiratory symptoms in countries/areas with possible community transmission of novel coronavirus infection. If it is unavoidable to come into contact with them, put on a surgical mask and continue to do so until 14 days after returning to Hong Kong;
- Avoid visiting hospitals. If it is necessary to visit a hospital, put on a surgical mask and observe strict personal and hand hygiene;
- Avoid touching animals (including game), poultry/birds or their droppings;
- Avoid visiting wet markets, live poultry markets or farms;
- Avoid making close contact with patients, especially those with symptoms of acute respiratory infections;
- Do not consume game meat and do not patronise food premises where game meat is served;
- Adhere to food safety and hygiene rules such as avoiding consuming raw or undercooked animal products, including milk, eggs and meat, or foods which may be contaminated by animal secretions, excretions (such as urine) or contaminated products, unless they have been properly cooked, washed or peeled;
- If feeling unwell when outside Hong Kong, especially if experiencing a fever or cough, wear a surgical mask, inform the hotel staff or tour escort and seek medical advice at once; and
- After returning to Hong Kong, consult a doctor promptly if experiencing a fever or other symptoms, take the initiative to inform the doctor of any recent travel history and any exposure to animals, and wear a surgical mask to help prevent spread of the disease.
