

“Clean, green, renewable power not tied to the old fossil gas market is what we need to bring down bills sustainably.”

23 May 2025 by [Green Party](#)

Responding to the news that the [price cap for energy bills is set to drop](#), Green Party Deputy Leader Zack Polanski said,

“£129 off energy bills will be felt as a welcome relief to families up and down the country who are struggling with the cost of living crisis. However, this reduction won’t scratch the surface for many who will still be worrying about how they will heat their houses over the winter ahead. It also highlights the folly of coupling our energy prices to the volatile gas market. [Research](#) shows that breaking this market mechanism that ties our energy bills to gas markets added £43 billion to UK energy bills. That’s £367 per household. This one step would allow us to utilise cheap renewable power to provide cheap renewable energy for British homes. Clean, green, renewable power not tied to the old fossil gas market is what we need to bring down bills sustainably.”
