

E-seminar: CBD in food supplements – Part 1

News story

E-seminar covering issues surrounding the use of CBD in food supplements and difficulties likely to be encountered in their analytical testing

This presentation by Ian Axford (Regulatory Scientist at the National Measurement Laboratory, LGC) aims to help manufacturers, suppliers and laboratories understand the issues surrounding the use of cannabidiol, more commonly known as CBD, in food supplements and the difficulties likely to be encountered in testing food supplements containing CBD. The manufacture and supply of food supplements are strictly controlled under food laws, it is therefore important to understand what CBD is and how it is regulated in food products. This presentation focuses on CBD, its chemistry in relation to food supplements and regulatory legislation, as well as considering the analytical aspects of measuring CBD in food supplements.

The e-seminar is intended for individuals working in official control laboratories, the food industry and those involved with the UK official control system.
