

# Detailed guide: About National Geological Screening (NGS)

At [Radioactive Waste Management \(RWM\)](#) we are bringing together existing geological information across the whole of England, Wales and Northern Ireland. This will give you a picture of what's under your feet, which is relevant to the long-term safety of a [Geological Disposal Facility \(GDF\)](#).

Our study has applied the [National Geological Screening – Final Guidance](#) which was published in April 2016 following expert independent review and public consultation.

The geological information will be made available for 13 [British Geological Survey regions](#) in an accessible format showing a high-level summary of each region's potential to host a GDF. More detailed knowledge will be needed to identify locations that would definitely be suitable.

The thirteen geological regions

This study will provide useful information for our conversations with any local community that shows an interest in our GDF programme.
