

[Notice: RH20 4HP, Island Gas Limited: environmental permit applications advertisement](#)

The Environment Agency consults the public on certain applications for waste operations, mining waste operations, installations, water discharge, radioactive substances activities and groundwater activities. The arrangements are explained in its [Public Participation Statement](#)

These notices explain:

- what the applications are about
- where you can visit to see the applications
- when you need to comment by

The Environment Agency will decide:

- whether to grant or refuse the applications
 - what conditions to include in the permits (if granted)
-

[News story: Independent report on Kent Oyster Farm published](#)

Independent experts commissioned by the Maritime and Coastguard Agency have produced a report looking at navigational risks in relation to oyster farm activity in the Whitstable area.

The report, which has been published on the Marine Management Organisation's website, concludes that the farm's operations are acceptable as a low risk to marine navigation. It recommends mitigation to reduce the risk even further, although acknowledging that the farm's owners have already adopted this in some instances.

Assessing navigational risk

In response to questions from members of the public the MMO [previously agreed to work with the Maritime and Coastguard Agency and Trinity House](#) to assess how oyster racks in the area may affect local navigation and safety.

Marine licensing legislation

The MMO's investigations under its marine licensing remit are still ongoing.

The MMO has a difficult task in managing competing uses of the marine area. It has previously explained its remit and the legislation it enforces relating to this development, specifically under the Marine and Coastal Access Act 2009.

The MMO has committed to reviewing its guidance around marine licence exemptions to take into account learning from this issue.

Press release: Applications to re-permit Brockham oilfield

These applications have been submitted by the site operator to bring the site into line with the current regulations for conventional oil and gas sites. This is part of the Environment Agency's review of all oil and gas permits granted prior to October 2013.

In deciding whether or not to issue the permits, the Environment Agency will take into account all relevant considerations and legal requirements.

You can view and comment on the [applications](#).

An Environment Agency spokesperson said:

An environmental permit sets out stringent conditions that a site must adhere to. We will not issue or vary an environmental permit for a site if we consider that activities taking place will cause significant pollution to the environment or harm to human health.

We are in the process of determining the applications to re-permit this site and we want to hear from the public and understand peoples' views. Everybody has the chance to see what the permit may look like and to raise any additional concerns before we make any final decision.

For all media enquiries please contact 0800 141 2743 or email Southeastpressofficel@environment-agency.gov.uk.

Notice: RM13 9DA, Ballast Phoenix Limited: environmental permit issued (EPR/BB3838AZ/S007)

The Environment Agency publish surrenders that they issue under the Industrial Emissions Directive (IED).

This decision includes the surrender letter and decision document for:

- Operator name: Ballast Phoenix Limited
- Installation name: Rainham IBA Facility
- Permit number: EPR/BB3838AZ/S007

Press release: Knostrop footbridge starts to take shape over the River Aire

The main structure of a new footbridge over the River Aire is making progress as a mobile crane lifts in the decks of the bridge section later this week.

The footbridge, part of the Leeds Flood Alleviation Scheme, is being constructed over the moveable weirs that are already in position at Knostrop.

The four bridge sections, are due to be installed this week and will be lifted into place by a 500 tonne crane. Once these are in place there will be 4 weeks of finishing work.

The new bridge structure will weigh approximately 150 tonnes and span approximately 70 metres. Designed by Knight Architects, the bridge has a sinuous form to reflect the movement of water over the new Knostrop Weir. It has been positioned to provide dramatic views of the weir in operation. The very narrow piers and curving underside of the bridge deck are designed to give the bridge a slender appearance when viewed from up or downstream.

The new footbridge is being installed to reconnect the much-used Trans Pennine Trail, following the removal of a section of island between the River Aire and Aire and Calder Navigation for flood risk reduction purposes.

Construction of the new Trans Pennine Trail along the north bank of the river will begin once the bridge has been installed. The new route of the Trans Pennine Trail will be opened on completion of the project in September.

Leader of Leeds City Council Councillor Judith Blake said:

It is very pleasing to see the new Knostrop footbridge being installed as part of the final touches of the first phase of the Leeds Flood Alleviation Scheme.

The bridge design is very attractive and striking, and will offer some fantastic views over the River Aire and of the new moveable weirs which I'm sure people will be keen to come and see for themselves.

Aside from the reassurance this scheme will offer to residents and businesses against the risk of flooding, it also brings important leisure and environmental benefits due to the views of the river as well as reconnecting the improved Trans Pennine Trail, offering the chance to see otters, salmon and other wildlife making the most of the improving water quality and access down river open for the first time in over 200 years.

At Knostrop, all three moveable weirs are now complete and fully operational. Similar weirs are also being constructed upstream at Crown Point as part of phase 1 of the Leeds Flood Alleviation Scheme.

Fish passes have been constructed on the new weirs at Knostrop and Crown Point, to help fish overcome these barriers and migrate upstream and further increase populations of species such as salmon.

The most obvious indicator of whether the fish passes are successful will be the sightings of salmon upstream of the weirs. Routine fish surveys will also be carried out by the Environment Agency to see any patterns in fish populations although there have already been sightings by angling enthusiasts of salmon through the city centre for the first time in over 200 years.

Rare and protected species, including otters, are now found in the River Aire catchment. This is a good indicator of improving water quality, following a history of heavy industry which depleted many species. Otters exist in a small but increasing population, and because of great improvement in water quality have been spotted in the city centre. An otter ramp has been installed at Knostrop to help them move up over the weir and otter holts will be built to help further encourage numbers.

The Leeds Flood Alleviation Scheme is led by Leeds City Council in partnership with the Environment Agency and is split into two phases.

Phase 1 began in January 2015, and costing in the region of £50million, is one of the largest river flood defence schemes in the country. The scheme is putting in place formal flood defences along the River Aire for the first

time. It has already seen works completed downstream in Woodlesford, and the city centre element which features the introduction of state-of-the-art moveable weirs at Crown Point and Knostrop is due to be completed this September. When finished, phase one of the scheme will indirectly safeguard 22,000 jobs and improve resilience for 3,000 homes and 500 businesses.
