

Press release: Large fine for Leicester textile firm

Leicester based Euro Dyers Ltd have been ordered to pay a total of £59,259 after operating an illegal textile dye house in a residential area.

Euro Dyers Ltd pleaded guilty at Leicester Magistrates' Court on 25 July 2018 and were ordered to pay a fine of £40,000, costs of £19,084 alongside a £175 victim surcharge.

The company, who operate at the Saffron Works, Saffron Lane, Leicester had been told on several occasions that they needed an environmental permit to operate. Despite numerous warnings from Environment Agency staff who encouraged and tried to assist them with an application, they never successfully applied for a permit.

A permit would have introduced conditions to manage odour, regulate emissions to air and sewer, the generation of waste, noise pollution and the prevention of accidents. The latter would have been especially important as inspections found flammable liquids stored on top of oxidising chemicals and chemicals stored with no containment to control leaks.

Environment Agency officers also found waste water leaking into a roadside drain outside.

Speaking after the ruling, an Environment Agency officer involved with the investigation said:

Despite several attempts to assist the company and after numerous warnings, this company still refused to be brought into the permitting regime., We hope that this fine will serve as a warning to them and others in the industry that there are strong penalties if they flout the law.

This is great news to the residents who live nearby, the environment and to competitors who do the right thing and comply with the law.

We are committed to working with the industry to ensure they operate legally. However, we will take enforcement action where a company refuses to comply. We make sure the impacts from these sites are controlled in accordance with a permit and that all companies in the industry are operating on a level playing field.

Dyehouse operators across England who do not currently hold an Environmental Permit from the Environment Agency should proactively assess the capacity of their sites to check whether they require a permit. Any company, who finds that their site's capacity is above the threshold of 10 tonnes per day,

should contact the Environment Agency for advice and guidance on their application for a permit.

[News story: New guide for farmers to help reduce air pollution from ammonia](#)

Updated: We have added the animated video produced to support the launch of the COGAP to reduce emissions of ammonia from agriculture.

A new guide published today sets out the steps farmers, advisors and contractors can take to reduce ammonia emissions and help improve air quality.

Our [Clean Air Strategy](#) highlights that agriculture is responsible for 88% of UK emissions of ammonia gas, which 'over-fertilises' natural habitats with nitrogen and combines with other pollutants to produce fine Particulate Matter pollution which is harmful to human health.

The [Code of Good Agricultural Practice \(COGAP\) for Reducing Ammonia Emissions](#) sets out simple steps all farmers can take to reduce ammonia emissions, such as using a nutrient management plan to calculate fertiliser application rates.

It also includes more significant changes to slurry storage, spreading equipment and infrastructure, alongside innovative techniques such as slurry and digestate acidification and separation.

Environment Minister Thérèse Coffey said:

Air pollution is not just an urban issue and with 88% of ammonia emissions coming from farming, the government is taking concerted action.

With clear new guidance and financial support we will help farmers across the country to take action, reduce emissions and help improve air quality.

In addition to the new guidance, Defra is providing a package of financial and technical advice to help farmers reduce their emissions.

Defra is investing £3 million over the next three years to fund a specialist team of experts who will offer support, advice and guidance on the most effective ways to reduce emissions from ammonia on their land.

It will fund demonstrations of the latest low-emission spreading equipment and one-to-one advice on reducing ammonia emissions which will be available from Catchment Sensitive Farming officers by the end of this year.

A video has also been produced by Defra to support the launch of the COGAP. [Ammonia emissions from agriculture video](#)

The RDPE Countryside Productivity scheme is currently offering 40% grants towards much of the manure management equipment recommended in the COGAP to reduce ammonia emissions. This includes low-emission spreading equipment, slurry and digestate storage bags, digestate processing equipment and mild acidification equipment. Farmers in priority catchments for reducing water pollution may also be eligible for grants towards covers for slurry stores and lagoons under the Countryside Stewardship scheme.

The voluntary code has been written by Defra in collaboration with the National Farmers Union (NFU), the Agriculture and Horticulture Development Board and the Agricultural Industries Confederation.

Contributions have also been made by other organisations including ADAS, the British Egg Council, the Central Association of Agricultural Valuers, the Environment Agency, Linking Environment and Farming (LEAF), the National Association of Agricultural Contractors, Natural England, Plantlife and the Tenant Farmers Association.

The guide includes information on how to reduce emissions when:

- storing organic manure
- applying organic manure
- applying manufactured nitrogen fertiliser
- feeding livestock
- housing livestock

NFU environment forum chairman Mark Pope said:

The NFU welcomes the launch of the Code of Good Agricultural Practice for Reducing Ammonia Emissions. The code contains a variety of measures to reduce ammonia emissions on farm, which in many instances provide multiple benefits to the environment and resource efficiency.

Farmers have recognised there is a need to reduce their ammonia emissions and the sector has made improvements with levels dropping by 10% in the past 30 years. However, further reductions are required from the industry in order to meet targets set under the Government's Clean Air Strategy. We urge Defra to continue to offer farmers guidance on this issue alongside targeted financial support where necessary.

Robert Sheasby, chief executive of the Agricultural Industries Confederation (AIC), which represents companies delivering both inputs and advice to

farmers said:

We are pleased to note that the new code recognises the importance of professional advisers in guiding farm practice. Those on the Feed Adviser Register and FACTS Qualified Advisers are already undertaking additional training that will update some 4,500 professionals on the code's requirements.

By delivering advice tailored to the needs of individual farms, their crops and livestock, we will make a significant contribution to meeting Defra's ambition for productivity and ammonia mitigation.

Jill Hewitt, Technical Consultant at the National Association of Agricultural Contractors added:

Spreading manures, slurry and digestate waste has become a predominantly contractor operation and the NAAC welcomes new guidance to help farmers and contractors make decisions about the best way to apply waste to land to maximise nutrient content, and minimise air pollution.

Nigel Penlington, Head of Environment and Buildings at the Agriculture and Horticulture Development Board said:

There is increasing pressure on farmers to control ammonia so we welcome this as a first step to help raise awareness and provide simple, practical steps to make a difference on the farm, improve the image of farming and its environmental performance and, at the same time, save farmers money and provide some benefits to the health and welfare of livestock and crop health.

Press release: Report on state of air quality in England highlights urgent action needed on ammonia emissions

A rise in ammonia emissions is having a damaging effect on wildlife and habitats, according to the Environment Agency's first ever report on England's air quality, published today. [The report](#) shows that, unlike other main air pollutants, emissions of ammonia have increased since 2013.

Ammonia deposition can overload land and water with nitrogen; it acidifies soils, natural habitats, and freshwaters. These effects reduce biodiversity in sensitive habitats creating a knock-on effect for our wildflower species, aquatic and insect life. The report shows of England's nitrogen-sensitive habitats, 95% are affected by nitrogen deposition.

The vast majority of UK ammonia emissions, 88%, come from the agricultural sector as a result of such activities as fertiliser use and slurry storage. Higher concentrations and deposition levels are associated with areas of intensive livestock production, especially dairy and beef.

The Environment Agency is today calling on farmers to take urgent action by changing land management practices and becoming more nitrogen efficient. A new Code of Good Agricultural Practice designed in collaboration with farming organisations, DEFRA and the Environment Agency is being published today to help farmers improve their land management and reduce ammonia emissions.

Emma Howard Boyd, Chair of the Environment Agency, said:

Urgent action is needed if we are going to tackle the hidden blight of ammonia emissions. These emissions are having a detrimental impact on the environment, precious habitats and wildlife. As custodians of the land, farmers must take the lead by changing their land management practices.

More broadly, poor air quality is bad for the environment but also people's health and wellbeing. This report also shows the need to tackle the high levels of nitrogen dioxide, ozone, and particulate matter that persist in certain areas. Improvement to air quality is going to require action from nations, government at a national and local level, organisations, and communities – but just as importantly – individuals.

Huge improvements in air quality since the 1970s

The report shows the progress made in reducing air pollution over recent decades. Since 1970 in the UK:

- Nitrogen oxide (NO_x) emissions have reduced by 72%
- Particulate matter (PM₁₀) has reduced by 73%.
- Sulphur Dioxide (SO₂) has reduced by 97%
- Non-methane volatile organic compounds (NMVOC) have reduced by 66%

These emissions come from a range of sources including vehicles emissions and industrial processes. By working with the industries, the Environment Agency has helped to contribute to these reductions and will continue to do so through future regulation.

However, while legal limits are being met for the majority of pollutants, high levels of nitrogen dioxide, ozone and particulate matter remain in many

urban areas with high concentrations around homes and schools, and are consequently are a major public health concern. Furthermore, under current projections, emission reduction targets for 2030 will not be met for ammonia, NOx, NMVOCs, SO2 and PM2.5 without further action. Particulate matter can have impacts on health even below current legal thresholds.

The Government has moved to address these issues by publishing its Clean Air Strategy. Clean Air is the first of the ten major goals set in the 25 Year Environment Plan, which contains important commitments aimed at curbing emissions from combustion plants and generators, ending the sale of new conventional petrol and diesel cars and vans by 2040, and improving industrial emissions further by building on existing good practice and the successful regulatory framework. The Clean Air Strategy is currently out for public consultation until mid- August. To comment please go to the [Clean Air Strategy Consultation](#)

Press release: Amnesty event chance for illegal car breakers to make fresh start

Illegal car breakers in the Portsmouth area are being invited to find out more about becoming 'legit' at an amnesty event being staged all this week by the Environment Agency.

The Environment Agency is encouraging those interested in making a fresh start to visit their incident vehicle parked next to Mick's Burgers on Portsdown Hill.

Visitors will be able to talk to staff in person and find out how to get a permit – with no catches or comebacks. The officers will be there from 8am until 3pm every day until Friday July 20.

The impact of illegal waste sites is estimated at £98 million, with illegal car breakers among the worst offenders. The Environment Agency has new powers to clamp down on illegal breakers, such as by blocking their yard, seizing their van and confiscating their profits.

Those choosing to hurt the reputation of the car-breaking industry by operating illegally without the necessary paperwork and infrastructure might save money in the short term. However, they cause pollution, fires, illegal hazardous waste, and take business away from the 'good guys' who are doing their best to run a professional operation to support their family.

Environment Agency officers are already out looking for illegal operators, on the roads of Portsmouth and Chichester, and online.

Vic Jennings, from the Environment Agency's Hampshire and Isle of Wight Regulatory Waste Team, said:

We're trying to make it as easy as possible for local car breakers to get legit. We're using our incident vehicle up on Portsdown Hill from 8am to 3pm all this week so people can drop in discretely, and anonymously if they wish.

We can answer their questions, or even start them on the process if that's what they want. Our message is simple: 'show us you're trying, and we'll help you all the way'.

[Free help is also available online](#) or by calling 03708 506 506.

The Environment Agency will be holding another amnesty week 15 to 19 October 2018, on the Chichester bypass, next to the Pass Street Café, PO19 7RT.

Press release: Yellow fish remind people how they can reduce sea pollution

The Environment Agency is using yellow fish to alert people on the Kent coast to what happens when they pour fat, oils or other waste down their yard drains or road gullies.

Teams visited Walpole Bay in Margate and Viking Bay in Broadstairs where they painted yellow fish symbols next to drains carrying surface water into the sea. Their aim is to remind residents and business owners how pollution can travel directly into the ocean.

Working with Thanet District Council and Southern Water, on 13 July they stencilled the fish symbols on and around the covers of road drains along the towns' promenades.

It is part of a national campaign by the Environment Agency to raise awareness of the importance of keeping the country's bathing waters clean, supported by the mantra 'Only rain down the drain!'

Initiatives like these have contributed to the great strides made in improving the quality of bathing water over the last 20 years. It is thanks to the hard work of the Environment Agency, Defra, water companies, councils, local communities, farmers and environmental organisations.

The Environment Agency continues to remind the public that everyone has an

important part to play in protecting the seas and improving the quality of the country's bathing waters.

Alan Cansdale, Environment Manager for the Environment Agency, said:

It has been great having the opportunity to work with local people, who also use and enjoy the local bathing waters. The Yellow Fish campaign is a simple and effective way of showing everyone that by making small changes we can all help to reduce pollution entering our rivers and seas which in turn helps to keep the local bathing water clean.

Councillor Jason Savage, Deputy Leader for Thanet District Council, said:

Our partnership work with the Environment Agency and Southern Water has enabled us to highlight the important role that residents, visitors and businesses play in keeping Thanet's beaches clean. The Yellow Fish campaign is a fantastic way to help get this message across.

Rob Butson, Bathing Water Manager for Southern Water, said:

It's vital we all work together to protect our beautiful beaches and bathing waters. Campaigns like Yellow Fish really help engage the community and spread the message that only rain should go down the drain!

We're proud to work in partnership with the Environment Agency and the Council to help play our part in improving bathing water quality across our region.
