

Press release: Anglian Water pays £50,000 after water pollution incident

Anglian Water has agreed to pay £50,000 to an environmental charity after a manhole overflowed with black sludge and grey liquid into a watercourse in Bedfordshire due to a blocked sewer.

An enforcement undertaking (EU) has been agreed with the water company, which has donated £50,000 to the Wildlife Trust for Bedfordshire, Cambridgeshire and Northamptonshire.

The Environment Agency accepted the offer by the water company to put right any damage caused by the pollution and to donate to an environmental charity.

The money is to benefit the local environment of Nene Valley and Ouse Valley Living Landscape areas. Anglian Water also paid back the Environment Agency's costs of £3,451.

Chris Tate, Environment Agency Team Leader, said:

Enforcement undertakings allow those who commit offences to restore the environment and to take steps to prevent a recurrence.

When appropriate, they allow a quicker resolution than a prosecution and help offenders who are prepared to take responsibility for their actions to put things right voluntarily working with their local communities.

Due to the pollution, which raised ammonia levels in the watercourse at Highfield Farm near Ravensden, the incident was classified as a category 2 by the Environment Agency.

The blockage in the sewer was in the branch from Yarlswood Immigration Centre and included single-use shampoo sachets which the immigration centre provided for its residents. There had been six blockages on the same stretch of sewer since 2011 when the sewer was transferred to AWS. It was not mapped onto the company's mapping system until after this incident in June 2015.

Practices for checking the sewer and at the immigration centre have since changed.

Press release: Military grade underwater cameras working to end illegal fishing for eels in the Fens

Fisheries enforcement staff at the Environment Agency have been working with new underwater sonar technology to assess fish populations, especially where it's hard to use classic methods like netting and electric fishing. The technology is also being put to excellent use elsewhere and giving us eyes underwater as well as above.

Our fisheries enforcement work helps to protect the environment and ensure fisheries income is generated through rod licence sales. All anglers require an Environment Agency rod licence to fish in England and Wales. The Environment Agency also lead on the enforcement of permits for migratory species like eels, smelt and lamprey. Regular auditing of these fisheries is essential to ensure protection of these iconic and in the case of eel – a critically endangered species; but also to ensure that the activity is regulated and sustainable.

Illegal eel fishing is a priority for the Environment Agency who are the lead organisation responsible for the conservation of this now endangered species. The eel stock is in decline, recruitment is at an all-time low, and exploitation of the stock is currently unsustainable. We regulate the fishing industry, which is carried out by only a handful of licensed fishermen. We also protect eel habitat, improve passage allowing ore access for eels further upstream and regulate other activities that might impact on each life stage of the species. While the West of England has issues with elver fishing – the capture of tiny juvenile eels returning from the America's for a global market, in the East the fens provide excellent habitat for mature eels, vital in supporting this European species. Adult "silver" eels will return to the Sargasso Sea as their final life stage to spawn and much of our enforcement work protects this phase.

Our new sonar equipment has allowed us to see, with amazing clarity, where we've never been able to before – under the water.

This makes checking for nets, especially illegal equipment, much easier and makes us more efficient and in some cases 100% effective. A recent audit of a river near Kings Lynn resulted in a record illegal eel net seizure; 16 nets in total capable of significantly impacting an emigrating eel population – hundreds of eels were released. The nets were removed and we worked with Norfolk police to investigate the case.

Using boat mounted sonar equipment we can travel up to 10km per day, checking every inch of channel for illegal and submerged equipment. This is our greatest weapon in halting the illegal exploitation of eels and gives us a chance to completely rid waters of illegal instruments. We are using this technology to regulate other areas of illegal fishing including poaching,

netting and trapping. You can see from the images how easy it is for us to spot illegal equipment, here both ends of an eel “fyke” net can be clearly seen stretching across the river channel. We use boats and specially trained enforcement staff to check traps and remove any illegal ones we find.

Anyone fishing for eels should be permitted, be fishing within the conditions of the licence, and nets must include visible and valid tags, as well as being equipped with otter guards too.

Any suspected illegal fishing activity should be reported to the Environment Agency’s Incident Hotline on 0800 80 70 60.

Anyone wishing to fish for migratory species including eels should visit [Permission to trap crayfish, eels, elvers, salmon and sea trout](#).

All anglers need a valid Environment Agency rod licence which can be bought using a credit or debit card by calling the Environment Agency’s telesales line on 0344 800 5386. Alternatively, they can be obtained from any Post Office or visit:

[Buy a rod fishing licence](#)

Press release: Scrapyard permit dodger claims end-of-life vehicles were for resale

The owner of an Exeter scrapyard has been given a suspended prison sentence for operating an illegal vehicle dismantling business.

Max Newbery was also ordered to pay £8,470 costs at the end of a 2-day trial before Exeter magistrates. The case was brought by the Environment Agency.

The court heard that in March 2014, the Environment Agency suspended the defendant’s environmental permit after he failed to pay the site’s annual permitting fee over a period of 5 years.

The scrapyard, at Barley Villas Yard, Redhills, Exeter, continued to accept vehicles despite it no longer being a permitted facility. Between 27 March 2014 and 25 February 2016 a minimum of 51 vehicles were accepted at the scrapyard.

When questioned, Newbery claimed he bought the vehicles with the intention of selling them on. He refused to accept they were waste as defined by the 2008 Waste Framework Directive which states that waste is ‘any substance or object which the owner discards or intends or is required to discard’.

Two women who took cars to the defendant's scrapyard both said they were disposing of their vehicles. One described her's as 'Scrap, not a goer' and the other, 'Nobody would buy it.' An Environment Agency officer, who visited the site, said in his professional opinion, all the cars brought to the scrapyard were end-of-life vehicles.

When questioned about the poor condition of some of the vehicles, Newbery claimed they had been 'vandalised by children', yet there was no CCTV at the site and little in the way of security to safeguard the vehicles he insisted were suitable for re-sale.

In addition to suspending his permit, the Environment Agency served Newbery with an Enforcement Notice requiring him to carry out improvements to the infrastructure of the scrapyard to minimise the risk of pollution and protect human health. Newbery said complying with the notice would be 'expensive' and it was therefore 'unreasonable' of the Agency to expect him to do so.

Magistrates were told the defendant's business had an annual turnover of more than £50,000 and that he had recently obtained planning permission for the site. This had increased its value to around £600,000 and had prompted Newbery to try to sell it.

Jacob Hess of the Environment Agency said:

Scrapyard operators are required by law to put in place appropriate environmental safeguards to protect human health and the environment. The defendant continued running his scrapyard without making any of the legally required infrastructural improvements.

He avoided investing in the business as this would eat into his profits and continued making money from an illegal site.

Appearing before Exeter magistrates, Max Newbery, of Barley Villas Yard, Redhills, Exeter

received a 24-week prison sentence, suspended for 2 years, and was ordered to pay £8,470 costs after being found guilty of operating a regulated waste facility without a permit and failing to comply with an enforcement notice in contravention of the Environmental Permitting (England and Wales) Regulations 2010.

Editor's notes

Environmental permits are necessary to minimise the risk of pollution or harm to human health from operations at waste sites such as scrapyards. There are set procedures for de-polluting and dismantling of end-of-life vehicles that contain potentially hazardous substances including engine oil, clutch fluid, coolant, brake fluid, gearbox oil, lead acid batteries, power steering fluid, screen wash, fuels, CFC's and lead wheel balancing weights.

Press release: Plymouth Skip Hire boss nearly jailed for dumping rubble

A judge has told a Plymouth man he escaped prison 'by the skin of his teeth' in a case brought by the Environment Agency.

Connor Calam fly-tipped waste on the edge of Dartmoor while subject to a suspended prison sentence for driving offences. The custodial sentence was very nearly activated by Exeter Crown Court.

The court heard a farmer found a large quantity of rubble and other waste deposited across a track near Pudson Farm, Okehampton in January 2017. The waste blocked access to three of his fields. The farmer reported the incident to the Environment Agency and local council and was told he would have to pay for its removal and safe disposal.

Enquiries by the Environment Agency traced the waste back to Plymouth Skip Hire in Stonehouse, Plymouth operated by Connor Calam, also known as Riley James.

The building waste came from insurance repairs carried out on a property in Plymouth by a local company that paid the defendant £245 to remove the material on the understanding he was a registered waste carrier.

Plymouth Skip Hire ceased trading in April 2017. Zenith Construction Ltd, whose waste was illegally tipped by the defendant, later paid for its removal as a goodwill gesture to the farmer.

Phil Butterworth of the Environment Agency said:

This prosecution is a timely reminder to businesses and home owners to ask three simple questions when getting someone in to dispose of their waste.

Is the person registered with the Environment Agency as a waste carrier – 'ask for proof'? Where do they intend to take the waste and can they provide a receipt? If they can't provide satisfactory answers to these questions, don't hand over your waste.

Appearing before Exeter Crown Court for sentencing on Tuesday 6 March 2018, Connor Calam, of Seaview Avenue, Lipson, Plymouth was fined £2,000 for breaching a suspended prison sentence and ordered to pay £2,500 costs. He was also made the subject of a 12-month community order, ordered to pay £260 compensation to Zenith Construction Ltd plus an £85.00 victim surcharge.

His Honour Judge Ralls QC said 'Fly-tipping in a beautiful part of the

country is a serious matter' and warned the defendant he'd escaped being sent to prison 'by the skin of his teeth.'

The sentencing followed an earlier hearing where the defendant was found guilty of disposing of controlled waste on land at Pudson Farm, Okehampton between 10 and 27 February 2017 without an environmental permit contrary to Section 33 of the Environment Protection Act 1990.

Press release: 20 years after the Northamptonshire Easter floods

The Environment Agency and its partners are calling on people to take steps to prepare for flooding and keep themselves and their families safe, 20 years after the Easter floods of 1998 caused devastation in Northamptonshire.

In 1998, an unusually wet spring led to severe flooding, with thousands of homes across the county affected. Two people lost their lives and over 150 people were hospitalised.

Northamptonshire County Council, Northampton Borough Council, Northamptonshire Fire and Rescue Service, Northamptonshire Police and the Environment Agency worked together both over the course of the floods and during the recovery process. In the 20 years since Easter 1998, great strides have been made to help protect over 7,000 properties that are at risk of flooding in the county.

The EA has invested £12 million in flood risk management in Northamptonshire over the last 2 decades. This investment contributed towards the completion of a number of works, including the construction of a flood storage reservoir at Weedon and significant improvements on the flood defences at Far Cotton and St James.

The EA is planning with its partners to invest a further £1.8 million by 2021 to reduce flood risk to even more people and properties across the county.

In addition to this investment, the EA has also made progress by using modern technology to improve the way it can warn people when flooding is possible. Over 4,500 properties in Northamptonshire are now signed up to receive flood warnings via their landlines, mobile phones or email addresses through the EA's free flood warning service.

Although the EA and its partners work around the clock to protect people and their property from flooding, the risk can never be completely eliminated. A third of properties at risk are still not registered to receive flood warnings, as residents have not signed up to the EA's free flood warning service. The EA urges people to prepare themselves and their loved ones for

flooding by signing up now.

Environment Minister Thérèse Coffey said:

Flooding is always devastating for those affected, and I know this has been the case for people and businesses in Northamptonshire.

That is why we have invested almost £12m in Northamptonshire flood defences in the past 20 years with a further £1.8m planned by 2021 to reduce the risk even further for home owners and businesses.

Environment Agency Area Flood Risk Manager Ben Thornely said:

Although we can reflect on 20 years of progress being made since the significant floods of 1998, we also recognise that flooding remains a risk to local communities across Northamptonshire. Our staff and our partners work around the clock to protect people and their properties from flooding, but we can never stop the risk completely.

This is why our free flood warning service is so important. Flood warnings give people valuable time to prepare for flooding – time that allows them to move themselves, their families and precious items to safety. Our flood warnings save lives and enable the emergency services to prepare and help communities.

I'd urge residents across the county to check whether they are at risk of flooding and to sign up for flood warnings, by visiting www.gov.uk/flood or calling Floodline on 0345 988 1188.

Cllr Ian Morris, county council cabinet member for transport, highways and environment, said:

Working with partners as the Lead Local Flood Authority for the County, an enormous amount of work has been done in the past two decades to tackle local flood risks.

The Pathfinder projects have empowered communities to tailor-make measures for their local areas, while the award-winning Flood Toolkit provides an online resource which acts as a central point of information for all flood-related issues.

However, we cannot be complacent and we recognise that we must continue to work together with the people of Northamptonshire to further reduce flood risk.

Cllr Mike Hallam, Northampton Borough Council's Cabinet member for environment, said:

Such events can be disastrous and it can take an age to recover from the devastation they leave in their wake.

A huge amount of work has been done in the past 2 decades to minimise the risk of such an awful event occurring again in Northampton but we remain ready to offer whatever support is needed in the event that it does.

Northamptonshire Fire and Rescue Service's Deputy Chief Fire Officer David Harding, who served during the flooding 20 years ago, said:

As in 1998, Northamptonshire Fire and Rescue Service is there to help and protect people.

Advances in both training and equipment mean we are well prepared and equipped to respond to all emergency incidents requiring our services, including flooding, but our aim is to help prevent incidents before life is at risk. In this respect I urge everyone to help themselves and be prepared by signing up to the flood warning system.
