

Press release: Wolverhampton man fined £1,000 for burying illegal waste

Wolverhampton Crown Court fined Ivor David John Powell (aged 65) £1,000 and ordered him to pay £4,000 in costs, along with a £100 victim surcharge, in addition to being ordered to clear the site within 3 years.

The charges were brought by the Environment Agency contrary to Regulations 12(1)(a) and 38(1)(a) Environmental Permitting (England and Wales) Regulations 2010.

As part of routine inspections Environment Officers visited the site on 11 November 2015, and observed a tractor operating on the land that appeared to be levelling the ground. The officers also saw large heaps of shredded mixed waste and noticed the land had been landscaped to incorporate the waste material, which Mr Powell confirmed had been coming onto the site for 4 months.

Environment Agency officers visited the site again in March 2016 and found buried compressed waste that had been imported on to the site.

The court heard that Mr Powell had avoided paying charges to dispose of the 5,335 tonnes of waste. If the landowner had taken the waste to an appropriate waste site or landfill, approximately £533, 500 of charges would have been incurred.

Speaking after the case, an Environment Agency officer in charge of the investigation said:

Waste crime is a serious offence with tough penalties as it can damage the environment, blight communities and undermine those operating legally. This case sends out a clear message that we will not hesitate to take action against anyone that fails to comply.

In mitigation on behalf of his client, Mr Powell's solicitor stated that Mr Powell had been naïve and doesn't have any previous convictions and acknowledged he had avoided paying disposal costs in relation to the waste.

Press release: Significant fine for water company following hazardous chemical leak

On 19 April 2018, at Derby Crown Court, sitting in Nottingham, Severn Trent Water Limited was fined £350,000, ordered to pay Environment Agency costs of £68,003, as well as a victim surcharge of £120.

An estimated 30,000 dead fish and 5km of damaged ecology along the River Amber led to proceedings brought against Severn Trent Water Limited following a pollution incident.

On 1 November 2015, the Environment Agency received reports of several hundred dead fish in the River Amber in Derbyshire and, following a search of the area, and discussions with Severn Trent Water employees, the source of the pollution was found to be a release of sodium hydroxide from the Ogston Water Treatment works, operated by Severn Trent Water, into the river.

Severn Trent Water identified that a leak within a chamber at the Treatment works had led to the contents becoming contaminated with sodium hydroxide, which was then washed through the road gully into the River Amber via an outfall pipe.

The pollution had a significant negative impact on the fish and invertebrate populations within the River Amber. The Environment Agency has been monitoring the natural recovery of the river ecology over the last two years. Monitoring has shown that whilst there has been some improvements, something resembling a full recovery is not expected until the summer of this year.

In passing sentence, His Honour Judge Smith found that:

It beggars belief that a company of the size and expertise of Severn Trent Water had no policy whatsoever in respect of potential

incidents arising in connection with their dosing chamber, either at this treatment works or indeed at any others throughout the UK. To have no policy whatsoever when dangerous chemicals could have leaked out in any number of ways is highly negligent. The size and success of Severn Trent makes it even more astonishing.

In mitigation Severn Trent expressed regret and apologises for the incident. The company co-operated fully with the investigation and contributed £228,000 to the Derbyshire Wildlife Trust.

Speaking after the case, an Environment Agency officer involved with the investigation said:

This is a significant fine imposed on Severn Trent Water Limited for causing pollution. I hope it sends a strong message that it is far more cost effective to avoid these incidents, as we will continue to take companies and individuals to task where they ignore their responsibilities.

Pollution causes damage to the environment and river ecology, in this case sodium hydroxide with a concentration of 20% amounts to a hazardous chemical and the leak affected 5km of the River Amber and killed approximately 30,000 fish and damaged other wildlife.

We encourage anyone who sees suspected pollution to call our incident hotline 0800 90 80 70 so we can act to reduce damage, investigate and in serious cases take enforcement action.
