

News story: New tax measures to improve air quality

People living in our towns and cities have a fundamental right to breathe clean air, Exchequer Secretary Robert Jenrick said today (15 May 2018), as he unveiled further plans to clamp down on pollution in urban areas.

The government has launched a [consultation on vehicle excise duty for vans](#) so drivers can be incentivised to go green. Less than one in every two hundred vans (0.4%) bought in 2016/17 was an ultra-low emission model. Therefore, ministers are seeking views on reforms to vehicle excise duty, currently charged at a flat rate of £250 for all vans, to make it more affordable to buy greener models.

A separate [call for evidence](#) is looking at whether the reduced duty rate for red diesel is holding back the use of cleaner fuels by non-road vehicles and machinery in towns and cities – for example cranes or generators used on construction sites. Red diesel, which accounts for 15% of all diesel consumption in the UK, currently benefits from a reduced rate of 11.14p per litre compared to the standard charge of 57.95p. The [call for evidence](#) excludes red diesel used for agricultural purposes and for fishing vessels.

These measures follow up on the Chancellor, Philip Hammond's [recent Budget announcements](#) – including the £220 million Clean Air Fund – which are aimed at improving air quality in the UK. They also form part of the government's [25-year Environment Plan](#).

Exchequer Secretary to the Treasury, Robert Jenrick, said:

We want to be the first government to leave the environment in a better state that we found it. One of the ways we can do this is by using the tax system to help drivers afford greener choices.

We want to help 'white van man' go green. We appreciate that buying a new van is a major investment for small businessmen and women and want to help make environmentally friendly choices more affordable.

Public health is at risk due to the use of red diesel in towns and cities. So we are looking at how we can level the playing field on red diesel and exploring how we can encourage users to ditch it.

Environment Secretary Michael Gove said:

Air pollution remains a significant threat to public health and everyone must play their part tackling its causes.

We will shortly build on our £3.5 billion plan to tackle roadside

emissions, publishing a comprehensive Clean Air Strategy setting out a wide range of actions to reduce pollution from all sources.

Businesses have a crucial role in this. That's why today we are setting out plans to make low emission vans more affordable and asking businesses how we can help them break down the barriers to the use of lower emission machinery.

Further information:

- Currently vehicle excise duty for vans remains at a flat rate of £250 no matter what type of vehicle. This consultation will look at changing this duty to encourage drivers to choose cleaner vans when purchasing a new van.
- It will explore creating a graduated first year rate for vans, as is already in place for cars. Most van purchases would pay less tax in the first year as a result of the change.
- Around 75% of vans purchased in 2016-2017 emitted over 150g/km of CO₂, while only 0.4% of vans purchased that same year were ultra-low emission vehicles.
- Red diesel contributes to air pollution by producing nitrogen dioxide, a toxic gas that inflames the lining of the lungs. It is particularly harmful for the most vulnerable in our society, such as children with asthma, who live in urban areas where it is used by non-road vehicles and machinery.
- The reduced rate costs around £2.4 billion a year in revenue compared to if duty was charged at the main rate and today's call for evidence is seeking information on whether this tax relief discourages the use of cleaner alternatives by non-road vehicles and machinery.
- Red diesel for agricultural use, fishing vessels, home-heating and other static generators, will be out of scope.

Women in Agriculture holds successful spring event

The Chair of Women in Agriculture has hailed the group's "fantastic" spring event in Perthshire last Friday (11 May).

Notice: NE20 0TA, Mr Ian Howson: environmental permit issued

The Environment Agency publish permits that they issue under the Industrial Emissions Directive (IED).

This decision includes the permit and decision document for:

- Operator name: Mr Ian Howson
- Installation name: Kearsley Farm Poultry Unit
- Permit number: EPR/VP3539FN/V004

Notice: Internal Drainage District and Board Order 2018: Axe Brue and Parrett

This is to comply with the Land Drainage Act and Statutory Orders process, there is a statutory legal duty to inform the general public.

Copies of the draft Orders and schemes are available for public inspection during normal office working hours for a period of thirty days after the date of publication of this Notice at:

Environment Agency (EA)

Manley House

Kestrel Way

Exeter EX2 7LQ

Internal Drainage Boards (IDBs)

Bradbury House

33-34 Market Street

Highbridge

Somerset TA9 3BW

**Department for Environment, Food and Rural Affairs (Defra) Flood
Risk Management Team**

3rd Floor Seacole Building

2 Marsham Street

London, SW1P 4DF

Any objection to the draft Orders should be made in writing to the Department for Environment, Food and Rural Affairs, quoting reference number LDC 2508 and 2509. Objections should be sent by 12 June 2018.
