Scheduled server reboot

The server that holds our large files used for our borehole core photos, the publications viewer, etc will be rebooted after 18:00 on 20 September. Disruption should be minimal. Sorry for any inconvenience.

[Guidance: Use of unbound municipal Incinerator Bottom Ash Aggregate \(IBAA\) in construction activities: RPS 206](#)

Updated: This regulatory position statement has been extended for one year until 19 August 2019.

The Environment Agency will review this RPS by 19 August 2019. You will need to check back then to see if it still applies.

Version 2.

[Research and analysis: Natural Capital and Ecosystem Service approaches to management](#)

Requirement R031

Requirement detail

Ecosystem services are benefit flows to humans from natural ecosystems. Natural capital is the stock of natural ecosystems from which these benefits flow. Mismanagement of natural capital assets or unsustainable use of a service ultimately has negative impacts on benefits obtained.

Pathways linking natural capital assets to goods and services that benefit humans are complex and linked requiring ecosystem level consideration. To implement natural capital and ecosystem services approaches requires understanding of the:

- range of economic and social benefits provided by the natural assets and their associated ecosystem services
- way in which these benefits depend upon the various assets and services
- state/condition and location of natural assets in relation to the benefits derived from them

Opportunities for investing in other types of natural capital that are not currently present should also be explored. Understanding the benefits obtained from natural capital; the assets that underpin them; and how investment, intervention or management might affect these benefits, is needed for long-term planning.
