

## **News story: Tony Fountain to step down from his role as Chair of Sellafield Ltd**

He will chair his last Board later this month.

The Nuclear Decommissioning Authority (NDA) will now begin the process of finding a suitable successor to continue the momentum created under Tony's tenure.

Nigel Smith, a senior independent Non-Executive Director with Sellafield Ltd, will cover the role in the interim.

David Peattie, NDA Chief Executive Officer, said:

On behalf of the NDA, I would like to offer my sincere thanks to Tony for his excellent leadership and contribution to the clean-up mission at Sellafield. We wish him every success in his new role.

## **Press release: Explore the wonders of the Witham in free Wyndham Park event**

Habitat improvements at Grantham's Wyndham Park are the stage for a day of free activities helping everyone enjoy the nature on their doorstep.

Environment and conservation experts will be on hand at the award-winning location on Sunday 24 September, offering games, competitions, crafts, wildlife spotting and more.

All activities have been designed to show how easy and fun it is to get closer to nature – and play a part in protecting it.

The event marks the official unveiling of improvements to Wyndham's Park's natural habitat, and a 100m-stretch of the River Witham that flows through it.

Enhancements include an area of stepped decking enabling safe access to a shallow part of the river and new wetland habitat to attract rare species.

All were funded using fishing licence money from the Environment Agency, which is re-invested into rivers, helping to improve facilities for anglers,

tackle illegal fishing and encourage more people to take up the sport.

The event will offer a chance to explore the changes to the park's habitat, and discover how they benefit both visitors and wildlife.

Matt Parr, geomorphology technical specialist at the Environment Agency, said:

Few things beat the great outdoors but that doesn't mean you have to escape into the wilderness. Natural wonders can be found right in the heart of your town.

We'll be on hand to help you spot the opportunities, using the beauty of Wyndham Park – and our improvements to the river there – to show how easy and fun it is to get closer to nature.

Organisations taking part in the event include the Environment Agency, South Kesteven District Council, Lincolnshire Rivers Trust, Anglian Water and Rivercare.

It takes place from 12noon to 4.30pm on Sunday 24 September. The date coincides with World Rivers Day, a global celebration of rivers, their value to local communities and the importance of looking after them.

## **Press release: Salmon in Derbyshire river a first since Industrial Revolution**

Atlantic salmon have been discovered on the River Ecclesbourne, a tributary of the River Derwent, Derbyshire for the first time since the Industrial Revolution following work carried out by the Environment Agency and its partners.

The discovery comes following the installation of fish passes on the River Derwent by the Environment Agency and Trent Rivers Trust which have helped to improve fish migration and allow the salmon to move upstream through the river.

The installation of fish passes is just one of a programme of actions carried out by the Environment Agency and its partners to remove barriers to migration and help restore salmon stocks throughout England.

Fisheries Specialist at the Environment Agency, Matt Buck, said:

Salmon is an important species and after two decades of work to improve water quality and the habitat for fish in the Trent catchment area, we now have a recovering population of salmon.

We are particularly excited to have found juvenile salmon in the Ecclesbourne for the first time in living memory, which indicates the success of salmon in this part of the river.

Poor water quality and weirs on the River Derwent constructed in the Industrial Revolution acted as a barrier to fish migration and left them stuck in unsuitable water. Weirs not only stop fish migrating, but trap fish spawning gravels and create ponded areas upstream which are not suitable for riverine fish species.

Over the past seven years, the Environment Agency has worked with partners and developers on the construction of fish passes on a number of weirs in the area. These passes have enabled adult salmon to swim freely further up the river, where they have access to more varied habitats providing suitable conditions to spawn, shelter and feed.

Matt continued:

Thanks to the work we have carried out with our partners, we are, for the first time ever, witnessing a recovering population of salmon on the River Derwent and other local rivers which is an excellent result. Last year we saw a record number of sightings of adult salmon, including a salmon found at Belper weir for the first time in over 100 years.

We are committed to ensuring that salmon numbers continue to increase within the catchment by working with partners to enable fish passage on the remaining barriers and to improve the quality of river habitats for this fascinating species. If salmon are thriving we know the river is doing well for all fish and wildlife.
