

Green Party: Climate change risk increasingly severe

25 January 2017

The Green Party has responded to a report published today which reveals Europe is warming at a faster pace than the global average and faces multiple climate hazards [1].

The European Environment Agency report is the most comprehensive study of Europe's vulnerability to climate change available [2]. It predicts Atlantic-facing countries will face heavier rainfalls, increased flood risk and more severe storm damage.

Jonathan Bartley, Green Party co-leader, said:

"Our environment is being destroyed all around us – our oceans and mountains, our wildlife and our homes are all under direct threat from climate extremes. As the planet races towards the 2C warming limit, we have two options as country. We can drag our feet and watch our environment suffer or we can move decisively away from the dirty, dangerous technology of the past by keeping fossil fuels in the ground and investing in renewables.

"Standing up to climate deniers has never been more important – even if they hold some of the most powerful positions in the world. The actions Donald Trump takes in the US will directly impact our lives in Europe.

"The EEA report makes for terrifying reading, but it's also an opportunity for Europe to develop effective strategies for tackling greenhouse gas emissions and for Britain to step up and lead the way on transitioning to a zero carbon economy."
