

Green Party Deputy Leader calls for action to build climate resilience in response to Storm Eunice

18 February 2022

- Amelia Womack: “Extreme weather events that used to be once-in-a-lifetime occurrences are now becoming increasingly frequent and ferocious due to climate change.”
- Greens call for climate crisis emergency response group to prepare country for more extreme weather and accelerate progress towards net zero.

Green Party Deputy Leader Amelia Womack has urged the Government to see the bigger picture as storm warnings are issued across the UK today.

Amelia Womack said, “Extreme weather like we are seeing with Storm Eunice is only going to become more common as the climate crisis intensifies.

“People will rightly be angry with politicians who have repeatedly failed to protect them. The warnings have been there for years that climate change will increase the frequency and ferocity of storms, yet the Government seems complacent about the lack of resilience built into our infrastructure or measures to help protect or rebuild people’s lives.

“In fact, the Government’s actions investing in new fossil fuels are only making the problem worse, leaving ordinary people to try and pick up the pieces.

“The Government needs to support and fund existing local resilience forums to meet the challenge of climate change and undertake a climate resilience review of all our infrastructure. This is particularly urgent for the case of our electricity grid which we will be relying on increasingly as we move beyond gas.

“The Prime Minister should urgently convene a climate crisis emergency response group with expert advisors to prepare the country for more extreme weather and accelerate progress towards net zero.”
