

Greens welcome review into Sizewell C: “We need to invest in renewables and insulation”

4 November 2022

The Green Party has welcomed the news that plans to build a new nuclear power plant in Suffolk are under review [1] and urged for more investment in renewables and insulation.

Green Party co-leader Adrian Ramsay said:

“New nuclear power is a distraction from addressing the climate emergency with the speed that is required – it is far too slow and much more costly than more effective renewable energy and storage alternatives, as well as having significant environmental concerns for the local community.

“So, we are pleased to see the government has put it under review but we now need to see real commitment to the measures that will make a benefit to people’s lives.

“It is vital the government invests more in renewables and insulating people’s homes as this is the cheapest, quickest and most effective way to bring people’s bills down, create millions of jobs and help tackle the climate crisis all at the same time.”
