

"HA Risk Alert" latest issue published

The following is issued on behalf of the Hospital Authority:

The 63rd issue of "HA Risk Alert" was published today (October 29) by the Hospital Authority (HA) as a risk management and communication initiative to further strengthen the reporting and monitoring of clinical incidents in public hospitals.

In the second quarter of 2021 (April to June), there were six Sentinel Events reported, comprising three cases of retained instrument/material after surgery/interventional procedure, two cases of inpatient suicide and one case of a procedure involving wrong body part. Among the 18 reported Serious Untoward Events, there were 15 related to medication error and three patient misidentifications.

"Subsequent to incident review and analysis of the root causes of these incidents, important lessons for patient safety have been identified, while recommendations are made and shared in this publication to avoid similar events in future," the HA spokesperson said.

The HA Head Office has released the latest "HA Risk Alert" to all staff. It can also be accessed by the public at www.ha.org.hk/riskalert. "HA Risk Alert" is published on a quarterly basis and posted on the HA website on the last working Friday in the months of January, April, July and October. The next issue is scheduled for January 28, 2022 (Friday).
