

Company fined as worker breaks leg from fall

A company has been fined £120,000 after an employee broke his leg while working on a property in Salisbury.

The man, who was 23 at the time, fell from the roof of the house on Sherfield English Road while working for EE Renewables Limited on 16 December 2022.

He had been adjusting a solar panel when he slid and fell four metres onto the ground below, sustaining a broken femur as a result.

A Health and Safety Executive (HSE) investigation found EE Renewables Limited had not properly planned the work at height and failed to take suitable steps to prevent a fall. The company had been hired by the homeowner to move nine solar panels higher up on the roof.

The company had been hired to move solar panels on the homeowner's roof

HSE guidance can be found at: [Work at height – HSE](#)

EE Renewables Limited, of Salterns Lane, Fareham, Hampshire, pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc. Act 1974. The company was fined £120,000 and ordered to pay £4,716 in costs at Swindon Magistrates' Court on 23 December 2024.

HSE inspector Sam Applebee said: "EE Renewables Limited did not properly plan this work so it could be carried out in a safe manner. There were inadequate means of protecting the workers from falling off the roof, with the company failing to provide edge protection.

The worker fell four metres onto the ground below

“Working at height remains one of the biggest causes of injuries and fatalities in Britain, so it is important that companies ensure they implement the correct control measures and safe working practices.”

This prosecution was brought by HSE enforcement lawyer Karen Park and supported by HSE paralegal officer Rebecca Withell.

[Update on investigation into Birmingham fairground incident](#)

The Health and Safety Executive (HSE) continues to investigate an incident involving a fairground ride in Birmingham City Centre.

Twelve people were injured as a result of the incident on the evening of 12 December 2024. Two people were taken to hospital and discharged shortly after with minor injuries.

The ride involved in this incident will remain in situ to preserve the scene while the criminal HSE investigation continues.

HSE Principal inspector Matthew Whitaker said: “We appreciate this incident has affected many people during the festive period. We are thoroughly investigating to establish whether there have been any breaches of health and safety law.

“Once our investigation is complete, a decision will then be made on what further action will be taken.”

West Midlands Police has released two men on bail pending further enquiries.

Anyone with CCTV or mobile phone footage, which may assist the investigation, has been asked to get in touch with West Midlands Police quoting log 4290 of 12 December.

Food manufacturer fined following machinery incidents

A food manufacturer has been fined more than half a million pounds after three of its employees suffered serious injuries in separate incidents involving machinery.

David Wood Baking Ltd has been prosecuted by the Health and Safety Executive (HSE). The incidents took place at between June and December 2022:

- On 25 June 2022, a woman's arm was drawn into a conveyor belt at the company's site at Lyon Road in Kearsley, Bolton. As a result, she suffered two open fractures and permanent nerve damage in the hand. She underwent three operations and the insertion of two metal plates to repair the damage.
- On 20 July 2022, a man working at the company's site in Sidney Street, Bolton, was injured after becoming trapped in a mechanical mixer. He was attempting a repair to the machine when the lid of the mixer dropped onto his left arm. Neither the supervisor or manager on call were contactable and the employee was stuck in the machine for around 90 minutes, eventually being freed by the fire brigade. The man suffered an open fracture to the arm as well as other fractures and nerve damage in the left forearm.
- On 4 December 2022, also at the Kearsley site, a woman had a finger severed after her hand became entangled in an unguarded drive belt on a machine that she was operating. She was also left with ongoing nerve damage to the hand.

Manchester Magistrates' Court heard that the company had a history of poor machinery guarding practice, having previously been convicted and fined £858,000 following an incident in 2021, where a 26-year-old employee had to have his right arm surgically removed following an incident with a piece of machinery.

The HSE investigation into the 2022 incidents found the company failed to keep employees safe from risks posed by food manufacturing machinery, and that training was inadequate and monitoring insufficient to rectify issues.

The risk of injury is higher when machinery becomes unreliable and develops faults, or it is used improperly through inexperience or lack of training. HSE guidance is available [here](#).

David Wood Baking Limited of Calverley Road, Oulton, Leeds, pleaded guilty to breaching Regulation 11(1) of the Provision and Use of Work Equipment

Regulations 1998. The company was fined £573,344 and was ordered to pay £12,288 costs at a hearing on 19 December 2024 at Manchester Magistrates' Court.

After the hearing, HSE inspector Jennifer French said:

"This company failed to keep employees safe from risks posed by food manufacturing machinery. The training was inadequate and the monitoring insufficient to rectify issues.

"It is important for industries to understand the potential dangers arising from the use of, or working near, dangerous machinery.

"HSE will always be prepared to use appropriate enforcement when companies fall short of their duties and responsibilities."

The prosecution was brought by HSE enforcement lawyer Iain Jordan.

School Academy Trust fined £300,000 after student death

A school academy trust has been fined £300,000 after a 19-year-old student died as a result of a 'series of management failures'.

Owen Garnett, who was described by his family as having "an incredible sense of humour" and who had "everything to live for" died two days after choking on a paper towel at Welcombe Hills School in Stratford-upon-Avon on 9 January 2023.

The teenager was a Sixth Form student at the school, which is for children with special educational needs and part of the Unity Multi Academy Trust (MAT). He had been diagnosed with Pica – a potentially life-threatening eating disorder where sufferers have a compulsion to eat things which have no

nutritional value. He had been a student at the school since the age of 11. Despite a near miss incident just days earlier, the school failed to take action to make sure it didn't happen again.

An investigation by the Health and Safety Executive (HSE) found that none of the staff in Owen's class team had received any specific training on the management of safety risks associated with Pica.

Owen Garnett died two days after choking on a paper towel at his school

Before she died, Owen's grandmother Maureen Garnett provided a statement alongside her husband Cliff.

"After Owen had passed away we never slept, we never ate, all we could do was cry," they said.

"This lasted for months.

"This was supposed to be a place where Owen was safe and secure and happy.

"Owen had Pica and should have been kept under close supervision at all times and I can't understand why this didn't happen.

"We would describe Owen as a unique, lovable, challenging and caring and happy child.

"He will never be forgotten and our family will never get over this."

The HSE investigation also found that students at the school have individual risk assessments which detail any specific health and safety risks, which relate to them, and the control measures that need to be in place at to protect against that risk. The risk of choking associated with Pica was identified on Owen's risk assessment and a "named person" was supposed to supervise him to make sure he did not eat anything that could cause him harm.

On 9 January 2023, Owen was out in the playground area with other students during a break from class, unsupervised, and found his way back into school.

It took several minutes for his absence to be noticed and when he was found, it was around the side of the building, and he was choking. Emergency services were called, and although they retrieved a ball of paper towel from his throat, he had been without oxygen too long and later died in hospital. Days before, there had been a similar incident with Owen, where he was seen in the playground by a teacher, again choking on blue towel, but Owen managed to clear his airway on his own.

The school failed to ensure that all the safety risks associated with Pica hazards, such as, in Owen's case, the garden area, or supplies of paper towels, were correctly identified and that the preventive and protective measures including supervision, were organised in such a way as to protect him. They also failed to effectively investigate and respond to the concerns raised by his family.

His foster parents, Jacqueline and Graham Blackwell, said the day Owen died had started out as any other.

"Owen got up and had his breakfast," they said.

"I can still remember him waiting excitedly for his usual taxi driver to pick him. He gave me a cuddle and then left for school.

"Owen was part of our family, we had made so many adjustments and made so many plans so that he could remain with us indefinitely.

"We had been saving to take him to Florida to swim with dolphins, but this is something he will never get to do. We ended up having to use this money to cover the cost of Owen's funeral.

"His death has ruined every part of our lives.

"Owen had everything to live for and was such a character and used to love joking and playing about – he had an incredible sense of humour."

- [HSE guidance](#) states that when assessing the health and safety risks to individual students is necessary, educational employers should follow a risk management approach that focuses attention on the real risks; involving employees, students and carers in identifying the individual's needs and necessary precautions.

Unity MAT, c/o Woodlands School Packington Lane, Coleshill, Birmingham, pleaded guilty to breaching Section 3(1) of the Health and Safety at Work etc. Act 1974. They were fined £300,000 and ordered to pay £10,750 in costs at Coventry Magistrates Court on 18 December 2024.

HSE inspector Rebecca Whiley said: "This tragic incident could have easily been avoided if Owen was being closely supervised, as he should have been.

"The near miss incident a few days before should have raised the alarm with the school and triggered an investigation into how Owen had been able to access the paper towel, and steps could have been taken to prevent it happening again.

“His death resulted from a series of management failures throughout Owen’s time at the Hub, and a failure by the school to act on the concerns raised by his family.

“Our thoughts today are with Owen’s family. He was a young man with a happy life ahead of him. He should have returned home safely to his family after a day at school, but because of the failings by Welcombe Hills School and Unity MAT, he did not.”

This HSE prosecution was brought by HSE enforcement lawyer Arfaq Nabi and paralegal officer Sarah Thomas.

[Drinks giant fined after worker sustains serious burns](#)

An international drinks manufacturer has been fined half a million pounds after an employee sustained burns to over 30% of his body.

The mechanical engineer had been repairing a defective pump at Diageo’s Glenlossie Distillery Complex in Elgin on 24 March 2021 when he was burned by pot ale.

The liquid, which had a temperature of 104 degrees Celsius, came out suddenly and unexpectedly from a pipe.

The worker sustained burns to his arms, hands, shoulders, back, chest, lower legs and ankles, before spending two weeks in intensive care where he was placed in an induced coma.

A Health and Safety Executive (HSE) investigation found Diageo failed to do

all that was reasonably practicable to ensure maintenance operations could be carried out without a worker being put at risk of injury.

HSE guidance on the safe isolation of plant and equipment is freely available and provides steps to prevent the release of substances that are hazardous including hot, flammable and toxic substances. The guidance can be found at [The safe isolation of plant and equipment – HSG253](#)

The incident took place at Diageo's Glenlossie Distillery Complex

Diageo Scotland Limited, of Lochside Place, Edinburgh, pleaded guilty to breaching Sections 2(1), 2(2)(a), 2(2)(c), 33(1)(a) and 33(1)(c) of the Health and Safety at Work etc. Act 1974. The company was fined £500,000 at Inverness Sheriff Court on 16 December 2024.

HSE inspector Isabelle Martin said: "This incident could so easily have been avoided by ensuring that procedures were in place to ensure that changes to work equipment installed in the plant were safe. However, more importantly Diageo should have had procedures in place to ensure that plant could be isolated safely and prevent the release of hazardous and dangerous substances.

"Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards."
