

Company fined after 'perfect' son crushed to death

A company in Hertfordshire has been fined after an employee was crushed to death.

James Rourke lost his life after being struck and run over by an excavator at Sarazen Gardens, Brampton on 18 November 2019.

James and his family had celebrated his sister Katie's 21st birthday the weekend before the fatal incident.

James Rourke

The 22-year-old site engineer had been attaching 'warning' work signs to fencing around the site when he was hit by the vehicle.

James, from Westcliff-on-Sea in Essex, had only joined his employer, Materials Movement Ltd, months before after graduating from the University of Birmingham with a degree in geology in the summer of 2019.

The firm had been hired to undertake ground clearance works at Sarazens

Gardens in preparation for the building of new houses.

A Health and Safety Executive (HSE) investigation found Materials Movement Ltd had failed to plan and manage the work at Sarazen Gardens. The company failed to properly supervise the work that James and the excavator driver were undertaking to ensure it was safe. The Baldock firm also failed to ensure the work was planned and managed to eliminate any chance of James working near the excavator.

HSE guidance states employers must consider five main precautions needed to control excavator hazards, these are; exclusion, clearance, visibility, plant and vehicle marshaller and bucket attachment. Further guidance on mobile plant and vehicles can be found at: [Construction – Mobile plant and vehicle industry health & safety \(hse.gov.uk\)](https://www.hse.gov.uk/construction/mobile-plant-vehicles/)

James' mother, Clare, said in her victim personal statement: "The sunshine has been taken from our lives and the dark gap is immense.

"Our profound loss is ever present; James is always missing. Missing from family events, Christmas, birthdays, holidays. Unknown to newborn family members. Unknown to new friends.

"Our house has a bedroom with no owner. Possessions we cannot bear to touch, photographs we cannot look at.

"We were an even family of six, now an odd family of five – incomplete, unbalanced."

Materials Movement Ltd, of Royston Road, Baldock, Hertfordshire, pleaded guilty to breaching Regulation 15(2) of the Construction (Design and Management) Regulations 2015. The company was fined £133,330 and ordered to pay £8,500 in costs at Peterborough Magistrates' Court on 22 March 2024.

HSE inspector Martin Paren said: "This tragic incident led to the avoidable death of a young man. This death could have easily been prevented if his employer had properly planned, instructed, and supervised the work.

"Our thoughts today are with the family of James, who should have been protected from such harm at work – because of the failings of Materials Movement Ltd he was not."

This prosecution was brought by HSE enforcement lawyer Jon Mack and supported by HSE paralegal officer David Shore.

Clare added: "James was perfect. He was a big part of our close family unit. He would do anything for us. We cherished him, dearly. He was a compassionate, valued friend to many and was known for his humour and gentle nature."

4. In February 2020, Materials Movement Ltd was sentenced following a separate HSE prosecution. The company was fined £33,000 following the death of worker Stephen Hampton who died from an explosion on Swain's Lane in Camden on 16 March 2017.

Engineering firm fined following worker's death

An engineering and services company has been fined following the death of a worker.

Alistair Hutton, a sub-contractor hired by NG Bailey Limited, lost his life while working on the construction of the Baird Family Hospital in Aberdeen on 18 January 2023.

He had been navigating a mobile elevating work platform (MEWP) along an unfinished corridor at the hospital when his head struck a metal lintel.

Mr Hutton, who lived in Forfar, immediately lost consciousness, and died at the scene shortly thereafter.

The 51-year-old was pronounced dead less than an hour after the incident.

Area of the corridor where the incident occurred

A Health and Safety Executive (HSE) investigation found NG Bailey Limited, the lead contractor for the project, had failed to consider overhead obstructions, especially during the transit of MEWPs on site. The assessments in place did not consider these risks despite HSE and industry guidance highlighting them and the available control measures.

HSE guidance states it is important that those responsible for selecting, specifying and managing MEWPs on site understand the risks associated with the use of a MEWP so they can advise on the precautions required to eliminate or control those risks. More on this can be found at: [Construction – Mobile elevating work platforms health & safety \(hse.gov.uk\)](https://www.hse.gov.uk/construction-mobile-elevating-work-platforms-health-safety/)

NG Bailey Limited, of Brown Lane West, Leeds, pleaded guilty to breaching Sections 3(1) and 33(1)(a) of the Health and Safety at Work etc. Act 1974. The company was fined £135,000 and ordered to pay a victim surcharge of £10,125 at Aberdeen Sheriff Court on 21 March 2024.

HSE inspector Graham McEvoy said: “There was a failure by NG Bailey Limited to consider available guidance and the work that was being done, which led to inadequate risk control measures being implemented and unsafe working practices developing.

“Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards. Our thoughts remain with Mr Hutton’s family and friends.”

Health board fined £220,000 following death of patients

Lothian Health Board has been fined £220,000 for safety breaches, following the death of two vulnerable patients.

Both were being cared for at the Western General Hospital in Edinburgh at the time of their deaths.

On 29 October 2017, one of the patients, then aged 55, was in the care of the Neurosurgery Ward following an attempt to take his own life in which he sustained a head injury. While in the care of the ward he fell more than 11 metres to his death from a second-floor window. The window in his room was not restricted to the required 100mm opening gap.

The Health and Safety Executive (HSE) investigation revealed a failure to ensure that the patient was in a room which had [windows that had been suitably restricted](#). The patient had undergone surgery which can cause confusion, delirium, and anxiety. It was considered to be foreseeable that patients in a state of confusion could be at increased risk.

On 23 January 2021, a second patient, then aged 79, was being cared for on the Medial Assessment Unit. He was presenting with hallucinations, confusion, distress and showing signs of delirium. After multiple attempts to abscond over the following days, he left the ward and was found some five hours later in the hospital canteen preparation room having fallen from a first-floor window. He did not regain consciousness and his condition declined until he sadly passed away on 8 February 2021.

One of the patients was found some five hours later in the hospital canteen preparation room having fallen from a first-floor window

Plans to transfer the patient to a secure ward to manage his condition had been considered. However, at the time of his admission the transfer of patients between different wards in the hospital was strictly controlled in order to reduce the risks of Covid infections. He was therefore not transferred to a more suitable ward with the necessary security facilities to prevent him from absconding.

At Edinburgh Sheriff Court on 19 March 2024, Lothian Health Board of Waterloo Place, Edinburgh pleaded guilty to breaching Regulations Section 3(1) and Section 33(1)(a) of the Health and Safety at Work etc. Act 1974. They were fined £45,000 in relation to the first incident and £175,000 for the second.

Speaking after the case, HSE inspector Kerry Cringan said: "Two vulnerable gentlemen who were in hospital to receive care lost their lives in these tragic incidents. Lothian Health Board failed to ensure the risks patients of falling from windows were adequately managed.

"All companies operating in the health and social care sector are required to ensure that systems of work are in place to ensure those in their care are safe. The risk of falls from windows is well-known and there are standards for opening sizes that must be achieved. HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards."

[Metal processing firm fined after man suffers life changing injuries](#)

A metal processing company has been fined £12,000 after an employee sustained life changing injuries at an incident at a premises in the Oldbury in the West Midlands.

Independent Slitters Limited carries out metal slitting at the facility – a process that involves coils of metal being split into various lengths. On 3 May 2022, 53-year-old Peter Daniels, husband and father of one, had a finger severed and a de-gloving of his right hand.

Guidance by the Health and Safety Executive (HSE) says employers should consider [how workers use machinery and ensure it remains safe to use](#).

The worker had a finger severed in the incident at the company's Park Street facility in Oldbury

Birmingham Magistrates' Court heard Mr Daniels was in the final stages of setting up one of the slitting lines operated by the company at its facility on Park Street when the incident took place. His right hand was degloved and his middle finger badly damaged. He spent 11 days in hospital, undergoing several surgeries, which included the amputation of the middle finger as well as skin grafts.

An HSE investigation found the company did not have in place a system of work to ensure that the activity of setting and checking the blades on the

slitting head rollers could be carried out safely. The risk assessment for the wide slitting line was not suitable and sufficient and did not consider the risks to employees when setting the blades.

Independent Slitters Limited of Park Street, Church Bridge, Oldbury, Warley, West Midlands pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc Act 1974. On 18 March 2024, the company was fined £12,000 and ordered to pay costs of £4,592.

After the hearing, HSE inspector Sarah Smewin commented: "The injuries that Mr Daniels suffered have impacted on all aspects of his life and resulted in him having to undergo numerous operations.

"The risks arising from working near to the dangerous moving parts of machinery are well known. Employers must assess their workplace for these risks and act to ensure that effective measures are in place to prevent access to dangerous, moving parts of machinery."

[Pork pie maker fined £800,000 after two workers lose fingers](#)

A company that specialises in making pork pies has been fined £800,000 after two young workers lost fingers in incidents at two different Nottingham bakeries.

Pork Farms Ltd, which makes other savoury goods such as quiches, at several sites across England, was given the fine after both workers were injured just weeks apart at the end of 2022.

The first incident took place on 16 November when a 22-year-old worker had his hand trapped while trying to clear a blockage on a conveyor at the firm's

Tottle Bakery on Dunsil Drive. He had to have a finger amputated after his hand was trapped between a chain and sprocket on a conveyor at the site.

However, just weeks later, on Christmas Eve, Mahamad Hassan, who was just 19, suffered similar injuries at Pork Farms Limited's Riverside Bakery. The teen also had a finger amputated as a result of coming into contact with a rotating shaft on a conveyor.

An x-ray image of Mahamad Hassan's left hand

Nottingham Magistrates' Court heard that the company had failed to ensure that the conveyors involved in both incidents were adequately guarded.

An investigation by the Health and Safety Executive (HSE) found that dangerous parts of both conveyors were accessible at the time of each incident. At the Tottle Bakery, an unsuitable interlock was used on a hinged guard over a chain conveyor system and an inadequate inspection and maintenance regime led to this interlock failing. The chain conveyor automatically moved as he tried to adjust the position of the chain following a blockage in the area.

At the Riverside Bakery, a section of the driveshaft of a lineshaft style conveyor was unguarded and spacing of the rollers was sufficient for a person's arm to pass through and reach the driveshaft below. Mr Hassan was injured when his arm went between the rollers and his gloved hand became entangled in the rotating driveshaft. In addition to physical guarding issues, there was no warning system to give notice that the conveyor was about to start working and emergency stop controls were not readily accessible.

Pork Farms Limited, of Queens Drive, Nottingham, pleaded guilty to breaching Sections 2(1) and 3(1) of the Health and Safety at Work etc. Act 1974. The company was fined £600,000 for the incident at the Tottle Bakery and £200,000 for the incident at the Riverside Bakery. The company was also ordered to pay costs of £6,482 at Nottingham Magistrates' Court on 18 March

2024.

Speaking after the hearing, HSE inspector Tim Nicholson said: “Both of these incidents were completely preventable.

“They left two young men with injuries that they will carry with them for the rest of their lives.

“Companies shouldn’t overlook important machinery safety basics, including provision and maintenance of adequate guards and protection devices, to ensure that access to dangerous parts of machinery is prevented.

“Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards.”
