

Results of tests of samples from Salisbury expected next week – chemical weapons watchdog

Results of tests of samples collected from individuals exposed to a nerve agent in Salisbury, the United Kingdom, are expected to be received by early next week, the head of the United Nations-backed body working to rid the world of chemical weapons said on Wednesday.

“Once the results of the analyses of the samples are received, the Secretariat will produce a report on the basis of these results and will transmit a copy of this report to the United Kingdom,” Ahmet Üzümcü, the Director-General of the Organisation for the Prohibition of Chemical Weapons ([OPCW](#)), told the body’s Executive Council.

“The UK has expressed its wish to be as transparent as possible and has already indicated its preference for disclosure of the report to other States Parties,” he added.

The samples were collected from Sergei Skripal and his daughter, Yulia, who have been hospitalized since when they were found on a public bench in the English city of Salisbury in early March, after reported exposure to a toxic chemical.

In the immediate aftermath of the incident, the UK said that it was “highly likely” that Russia was behind the incident using a deadly nerve-agent. The accusations were met by a firm denial by Russia, which as a State Party to the Chemical Weapons Convention ([CWC](#)), requested today’s Executive Council [meeting](#).

According to OPCW, samples were also collected from a third individual – a police official – reportedly exposed to the chemical.

The samples were sealed and brought to the OPCW laboratory on 23 March.

An OPCW expert team was deployed to the UK at the country’s request seeking technical assistance in identifying the nature of the toxic chemical reportedly used.

In his update, Mr. Üzümcü also said that OPCW team worked independently and is not involved in the national investigation by the UK authorities and that no State Party is involved in the technical work that is being carried out by the Secretariat.

The OPCW is the implementing body of the Chemical Weapons Convention, which came into force in 1997 and outlaws the production, stockpiling, and use of [chemical weapons](#) and their [precursors](#).
