

Saving our Bumblebees

Lecture on Tuesday 31st January at the Dalhousie Building Lecture Theatre 1, University of Dundee :

Bumblebees are amongst the most important of wild pollinators; many wildflowers would not set seed without them, and they are the main pollinators of crops such as tomatoes, blueberries and raspberries. Concerningly, many bumblebees are in decline, with 3 species now extinct in the UK and the first global extinction recently occurring in USA.

Dave Goulson, Professor Of Biology (Evolution, Behaviour and Environment) at the University of Sussex, will discuss the drivers of these declines, and the many things we can all do to halt and reverse them, at the Biochemical Society sponsored lecture.

Dave has published over 200 scientific articles on the ecology of bees and other insects, and is author of 'Bumblebees; their behaviour, ecology and conservation' (2010, Oxford University Press) and 'A Sting in the Tale' (2013, Jonathan Cape), a popular science book about bumblebees.

He is a Fellow of the Royal Entomological Society, and a Fellow of the Royal Society of Edinburgh.

In 2010 he was BBSRC "Social Innovator of the Year" and in 2013 he won the Marsh Award for Conservation Biology from the Zoological Society of London.

The lecture will be followed by a drinks reception from 5-6pm, giving the opportunity to meet with Dave in a more informal setting.

Tickets are free but should be booked in advance [here](#).
