

# SITI visits Beijing (with photos)

The Secretary for Innovation, Technology and Industry, Professor Sun Dong, today (May 9) paid a visit to the Hong Kong and Macao Affairs Office of the State Council and the Ministry of Science and Technology (MOST) in Beijing.

In the morning, he called on the Director of the Hong Kong and Macao Affairs Office of the State Council, Mr Xia Baolong, to brief him on the latest situation of Hong Kong's innovation and technology (I&T) and development of new industries, as well as the progress of key areas of work under the Innovation, Technology and Industry Bureau (ITIB), which include enhancing Hong Kong's I&T ecosystem, promoting "new industrialisation", fostering the development of technology industries, developing digital economy, and attracting strategic I&T enterprises and talent. Director Xia highly commended the performance of the ITIB and fully recognised the work of the bureau.

Director Xia said that the current-term Hong Kong Special Administrative Region Government has placed the promotion of I&T development at the forefront of its administration, while continuously enhancing the I&T ecosystem and actively attracting I&T enterprises and talent, noting that the efforts have achieved positive results that deserve full recognition. The Central Government will, as always, fully and faithfully uphold the principle of "one country, two systems", and fully support Hong Kong in consolidating its unique position and advantages and accelerating the development of an international I&T centre.

Professor Sun expressed his gratitude for Director Xia's encouragement. The country staunchly supports the development of Hong Kong as an international I&T hub. The Hong Kong Special Administrative Region Government will live up to the mission that the country has entrusted to it, support the high-quality development of the Guangdong-Hong Kong-Macao Greater Bay Area, and continue to strengthen I&T co-operation with different Mainland provinces and cities, thereby complementing each other's strengths. Hong Kong will better integrate itself into national development and contribute to the country's grand vision of realising self-reliance and self-improvement and building a strong nation in science and technology.

Professor Sun visited the MOST in the afternoon for a work meeting with Vice Minister of Science and Technology Mr Chen Jiachang and relevant responsible officials. Professor Sun expressed his gratitude to the Central Government and the MOST for their staunch support for Hong Kong's I&T development over the years, with the introduction of numerous important technology measures benefitting Hong Kong, including the expansion of national science and technology programmes open to Hong Kong and promoting the cross-boundary flow of key elements of scientific research. Both sides exchanged views in the meeting on advancing the development of the Hetao Shenzhen-Hong Kong Science and Technology Innovation Co-operation Zone, and explored the implementation of dedicated cross-boundary measures to promote

the flow of I&T elements, such as people, materials and data, thereby allowing Hong Kong to further contribute to the science and technology development of the country. They also discussed the restructuring of the State Key Laboratories in Hong Kong and the arrangements for the 18th meeting of the Mainland/Hong Kong Science and Technology Co-operation Committee.

Professor Sun will return to Hong Kong tomorrow (May 10). Before concluding his visit to Beijing, Professor Sun will meet with the leadership of the People's Government of Beijing Municipality.
