

## LCQ3: Pedestrian-friendly measures

Following is a question by the Hon Hui Chi-fung and a reply by the Secretary for Transport and Housing, Mr Frank Chan Fan, in the Legislative Council today (June 13):

Question:

In order to improve the pedestrian environment, the Transport Department (TD) has set up pedestrian precincts in a number of districts since 2000. In recent years, some researchers and planners have proposed to set up a pedestrian and tram precinct or an open space in a section of Des Voeux Road Central. Meanwhile, some members of the public have criticised the government departments concerned for the unclear delineation of powers and responsibilities in managing pedestrian precincts, which has given rise to environmental hygiene and noise problems in some pedestrian precincts, such as the Mong Kok Pedestrian Precinct. Regarding measures to improve the pedestrian and street environment, will the Government inform this Council:

(1) whether the Transport and Housing Bureau (THB) can coordinate the efforts of the Development Bureau, TD, Highways Department and the Police to enhance the management of pedestrian precincts, so as to avoid the bureaux/departments each administering its own way or the emergence of a situation that "comes within nobody's jurisdiction";

(2) given the commissioning of both the MTR Shatin to Central Link and the Central-Wan Chai Bypass as well as the implementation of the Electronic Road Pricing Pilot Scheme in Central and its adjacent areas in the next two to three years, whether the THB will, in the light of those new situations, commence a feasibility study on setting up a pedestrian and tram precinct in a section of Des Voeux Road Central; and

(3) given that the Transport for London of the United Kingdom has launched the Transport Strategy of Healthy Streets Approach, under which elements will be incorporated into pedestrian precincts to cope with climate change, reduce carbon emission, encourage walking and improve public health, whether the THB can break out of the established policy framework to implement a long-term policy on healthy streets with an audaciously innovative attitude?

Reply:

President,

The Government has been striving to create a pedestrian-friendly environment. We have introduced a host of measures over the years to foster Hong Kong as a walkable city. As announced in "The Chief Executive's 2017 Policy Address" last October, the Government will continue to take forward "Walk in HK" by launching a series of measures to encourage citizens to walk more. Our policy objective is to enhance the overall walkability of our city to facilitate citizens to commute, connect and enjoy, making walking an

integral element of Hong Kong's sustainable development.

My consolidated reply to the various parts of the Hon Hui Chi-fung's question is as follows:

Since 2000, the Transport Department (TD) has progressively implemented pedestrian environment improvement schemes in Causeway Bay, Central, Wan Chai, Mong Kok, Tsim Sha Tsui, Jordon, Sham Shui Po, Stanley, Yuen Long and Shek Wu Hui. Under the schemes, full-time or part-time pedestrian streets (commonly known as pedestrian precincts) are implemented to improve pedestrian environment. Relevant government departments regulate the activities and conditions of these pedestrian precincts in accordance with the respective powers conferred on them by the law. For instance, the TD is responsible for formulating suitable traffic management measures with regard to the pedestrian and vehicular traffic of the relevant streets; the Police is responsible for maintaining public safety and public order, and deploying staff to the scene upon receipt of noise complaints concerning pedestrian precincts; the Food and Environmental Hygiene Department is responsible for handling issues related to environmental hygiene, street cleansing, hawking activities, etc.; the Home Affairs Department conveys the views of local residents and the District Councils, and co-ordinates the joint efforts of relevant departments in addressing the issues concerned. Various departments have been maintaining close collaboration, and jointly manage, regulate and monitor pedestrian precincts.

The TD has been monitoring the traffic situation in Central and its vicinity, including Des Voeux Road Central. It will also pay close attention to the traffic situation after the commissioning of the Central-Wan Chai Bypass and the cross-harbour section of the MTR Shatin to Central Link, including the changes in routes, frequencies and patronage of public transport services. Furthermore, the TD is conducting a feasibility study on the Electronic Road Pricing Pilot Scheme in Central and will map out the details and implementation strategy in due course for public consultation. The Pilot Scheme will further improve the traffic situations in Central and its vicinity.

With regard to the creation of a pedestrian-friendly environment, the Government welcomes proposals from all sectors to improve the walking environment. When considering various proposals, the Government will take into account the demands of the local community and businesses, local characteristics, street management and impact on traffic.

In the past, some organisations proposed to set up a pedestrian and tram precinct in Des Voeux Road Central. Some community organisations filed an application in 2015 under the Town Planning Ordinance requesting to rezone Des Voeux Road Central as a pedestrian and tram precinct. The proposal had implications on the traffic and public transport of the nearby road sections, demand for loading/ unloading of goods and passengers, operation of emergency access and traffic arrangements during redevelopment or maintenance of buildings, etc. Relevant departments provided views to the Town Planning Board under their respective purviews. The organisations concerned withdrew the rezoning request in 2016. Should there be other feasible study or

proposal in future regarding the setting up of a pedestrian and tram precinct in Des Voeux Road Central, relevant departments are prepared to provide views.

As mentioned above, the Transport and Housing Bureau and the TD are actively taking forward the "Walk in HK" policy to enhance the overall walkability of Hong Kong. This is not only a transport policy, but also an integral part of the Government's various policies to tackle climate change, encourage a healthy lifestyle, strengthen community interaction and build an age-friendly environment. We are also aware of the Healthy Streets Approach launched by the Transport for London to encourage the public to reduce the use of private cars and to walk, cycle and use public transport more as the major means of commuting. The Healthy Streets Approach is in line with the "Walk in HK" policy in many ways.

We will continue to adopt a comprehensive strategy by consolidating past efforts to foster a pedestrian-friendly environment. We encourage the public to walk more and reduce the use of mechanised transport for short-distance commuting. This will help alleviate traffic congestion, improve air quality and enhance public health. Specific measures include: (i) "Make it smart" by providing user-friendly information, for which we enable citizens to use the TD's "Hong Kong eTransport" mobile application for planning and searching for the best walking routes; (ii) "Make it connected" by enhancing our pedestrian networks, for which we are currently exploring ways to enhance connectivity between Wan Chai and Sheung Wan; (iii) "Make it enjoyable" by making walking a pleasant experience, for which we will continue to provide covers on certain walkways connecting to public transport facilities; and (iv) "Make it safe" by providing a safe and quality pedestrian environment, for which we will review and update existing planning standards and design in relation to pedestrian environment and facilities.

---

## [Lido Beach and Casam Beach temporarily closed](#)

Attention TV/radio announcers:

Please broadcast the following as soon as possible:

Here is an item of interest to swimmers.

The Leisure and Cultural Services Department announced today (June 13) that Lido Beach and Casam Beach in Tsuen Wan District are temporarily closed until further notice for maintenance of shark prevention nets. Red flags have been hoisted at the beaches. Beach-goers are advised not to swim at the beaches.

---

## LCQ4: Boosting development of industries that enjoy advantages in process of Hong Kong's re-industrialisation

Following is a question by the Hon Wu Chi-wai and a reply by the Secretary for Innovation and Technology, Mr Nicholas W Yang, in the Legislative Council today (June 13):

Question:

The Policy Address published in January last year stated that industries enjoying advantages in the process of Hong Kong's re-industrialisation (advantageous industries) included biotechnology. It is learnt that quite a number of Mainland and overseas cities have implemented various concessionary measures in respect of land, capital and taxation to attract innovation and technology enterprises to establish their bases there. However, Hong Kong has not implemented similar measures, nor did it provide with concessions in taxation, housing, etc to attract innovation and technology talents to come to Hong Kong for career development. On the other hand, some academics have pointed out that Hong Kong should leverage its strength in higher education by establishing a higher education institution that aims to nurture students' business start-up capability so as to boost the development of advantageous industries. In this connection, will the Government inform this Council:

(1) whether it will, by making reference to the practices of Mainland and overseas cities, formulate more competitive measures to attract enterprises in advantageous industries to establish their bases in Hong Kong, and to attract relevant talents to come to Hong Kong for career development; if so, of the details; if not, the reasons for that;

(2) whether it has examined if Hong Kong's existing policies on land and taxation, infrastructure facilities, pool of talents, etc are sufficient to meet the needs of biomedicine enterprises in terms of factory sites and scientific research talents; if so, of the details; if not, the reasons for that; and

(3) whether it will consider allocating lands in the Lok Ma Chau Loop or other suitable locations for the construction of a superb scientific research base that will bring together the scientific research strengths of various universities in Hong Kong, and for the construction of a business start-up institution to boost the development of advantageous industries; if so, of the details; if not, the reasons for that?

Reply:

President,

Innovation and technology (I&T) is the driving force of economic development in the new era. Promoting re-industrialisation is an important part of the Government's I&T policy. Over the past few years, an atmosphere favourable to I&T development has gradually built up in Hong Kong, with internationally renowned research institutions settling herein one by one. We will continue to focus on promoting the development of targeted technology areas, including: biotechnology, artificial intelligence (AI), robotics, smart city etc.

Our reply to the various parts of the question is as follows:

(1) and (2) With an independent judicial system and intellectual property protection system, a world-class financial centre, a level-playing field and comprehensive infrastructure, as well as the unique edges under "one country, two systems" and the huge opportunities brought about by the development of the Guangdong-Hong Kong-Macao Bay Area, Hong Kong is among the first choices of business destinations for Mainland and multinational companies.

Using the examples of healthcare technologies, AI and robotics technologies, the Government is working on the establishment of the research clusters on healthcare technologies and on AI and robotics technologies in the Hong Kong Science Park (Science Park). We have set aside \$10 billion to provide financial support to non-profit-making research centres or laboratories operating at the two clusters.

Separately, the Government will allocate \$10 billion to the Hong Kong Science and Technology Parks Corporation (HKSTPC) for constructing research-related infrastructure and facilities for common use to strengthen Hong Kong's research and development (R&D) capabilities, and for enhancing support for the HKSTPC's tenants and incubatees, which includes expanding its Corporate Venture Fund and Incubation Programme, as well as attracting international technology enterprises to set up bases in the Science Park through providing incentives.

As regards healthcare technologies, the Biomedical Technology Support Centre in the Science Park is now providing more than 80 types of ready-to-use life science experimental instruments for use by tenants or incubatees. The HKSTPC will make use of the allocation to construct specialised facilities for healthcare technologies, including pilot batch production facilities, animal research and drug testing facilities, and bio bank and medical informatics, etc. Also, there are 23 pharmaceutical plants in the three Industrial Estates (IEs) managed by the HKSTPC, occupying an area of more than 200 000 square metres. To tie in with the development of the upstream, midstream and downstream industrial chain of healthcare technologies, the Government will explore with the HKSTPC to identify suitable premises in the IEs of Tai Po or Yuen Long for developing healthcare technology industry upon conversion and remodelling.

Stage 1 of the Science Park Expansion Programme is now underway. Upon expansion, some floors will be set aside for laboratory and research work spaces for healthcare and AI/robotics technologies. The HKSTPC will also convert a building in the Science Park for healthcare research laboratory.

In recent years, the Government has invested a large sum of resources to improve the I&T ecosystem in Hong Kong through various targeting measures, with a view to attracting to Hong Kong top research institutions and technology enterprises as well as technology talents from the Mainland and overseas. Relevant measures include –

(i) On land and infrastructure, the Government actively identifies land to dovetail with I&T development, and is developing the Hong Kong-Shenzhen Innovation and Technology Park (the Park) in the Lok Ma Chau Loop, thereby facilitating the sustainable development of I&T and re-industrialisation in Hong Kong.

(ii) On funding support, to encourage enterprises to carry out more R&D projects locally, we will provide enhanced tax deduction for the qualifying local R&D expenditure incurred by enterprises. The relevant Amendment Bill was introduced to the Legislative Council on May 2, 2018 for scrutiny.

(iii) On pooling talent, we have announced the introduction of the pilot Technology Talent Admission Scheme to facilitate the admission of overseas and Mainland technology talent to work in Hong Kong by tenants and incubatees of the HKSTPC and Cyberport that are engaged in certain technology areas. We will also launch the pilot Technology Talent Scheme to nurture local technology talent in the third quarter of this year. Besides, the InnoCell will provide residential units and ancillary facilities to target tenants, incubatees and overseas/Mainland visitors in the Science Park starting from 2021.

The Government will from time to time review existing policies and measures, and make enhancement as and when appropriate, having regard to the need arising from I&T development, thereby maintaining Hong Kong's competitiveness.

The Innovation and Technology Bureau will collaborate with the Invest Hong Kong and the Economic and Trade Offices in overseas and Mainland to promote Hong Kong's latest I&T situation and opportunities, thereby attracting international R&D institutions and technology enterprises to Hong Kong.

(3) In accordance with the Memorandum of Understanding on Jointly Developing the Lok Ma Chau Loop by Hong Kong and Shenzhen, both sides have agreed to set up an integrated advanced training platform in the Park, with a focus on the provision of postgraduate programmes and professional training courses on new or advanced technology, aiming to nurture talents, and engender synergy and clustering effects with the facilities in the Park. We encourage the world's top higher education institutions to set up I&T related branches or

facilities in the Park. With reference to the overall development plan of the Park, the Education Bureau will commence discussion and study on the details of establishing higher education facilities in the Park in due course.

Regarding the setting up of a superior scientific research base, the Government has proposed to establish two research clusters with an aim to attract top-notch local, Mainland and overseas research institutions. We will consider whether to expand the scale of the two clusters and whether to establish new clusters having regard to the experience of the implementation of the two research clusters and the global technology development, etc.

---

## **LCQ15: Plans for increasing public hospital beds**

Following is a question by the Hon Jimmy Ng and a written reply by the Secretary for Food and Health, Professor Sophia Chan, in the Legislative Council today (June 13):

Question:

It is learnt that all public hospitals experience an overflow of patients every year when Hong Kong enters an influenza peak season. It has been reported that since 1997, the total number of public hospital beds has increased only slightly by 2.9%, which is far lower than the 11% growth of Hong Kong's population during the same period. This, coupled with the increasing demand for medical services arising from an increasingly ageing population, has resulted in a persistent short supply of public hospital beds. In this connection, will the Government inform this Council:

(1) of the authorities' plans to increase public hospital beds and construct new hospitals in the coming five years and the latest progress of such plans (including the timetable), as well as how such plans will address the increased healthcare needs brought about by the ageing population in Hong Kong; and

(2) as the "Hong Kong 2030+: Towards a Planning Vision and Strategy Transcending 2030" projects that special medical facilities (including a Chinese medicine hospital and testing centre) will, in addition, take up about five hectares of land, of the criteria and assumptions adopted by the Government in arriving at that projected figure on land demand, and the relevant details?

Reply:

President,

Having consulted the Development Bureau, my reply to the various parts of the question raised by the Hon Jimmy Ng is as follows:

(1) In the recent years, a number of hospital redevelopment, expansion and development projects have been completed and put into operation including the development of North Lantau Hospital, Tin Shui Wai Hospital, Main Clinical Block and Trauma Centre of Prince of Wales Hospital, Ambulatory Care Block of Tseung Kwan O Hospital, phase 2 redevelopment of Caritas Medical Centre and redevelopment of Yan Chai Hospital. Hong Kong Children's Hospital is scheduled to commence service by phases from the fourth quarter of 2018.

To cater for the growing healthcare service demand and to improve existing services, \$200 billion has been earmarked for the Government and the Hospital Authority (HA) to implement the first 10-year Hospital Development Plan (HDP) in 2016. The first 10-year HDP covers the construction of a new acute hospital, redevelopment and expansion of 11 hospitals, construction of three community health centres and one supporting services centre. In terms of deliverables, the first 10-year HDP will provide around 5 000 additional beds, 94 additional operating theatres, 30 haemodialysis day beds, three oncology centres and one state-of-the-art neuroscience centre, and also increased capacity of specialist outpatient clinics and general outpatient clinics.

In response to the increasing demand for healthcare services due to demographic changes, the Government has invited the HA to start planning the second HDP. In formulating the second HDP, the HA will take into account a number of factors, including demographic changes, service utilisation and changes in service delivery models of each district, with a view to having a comprehensive projection of the future demand for public healthcare services, including the demand for hospital beds.

Besides, HA will continue to provide additional beds for existing and newly completed hospitals through its annual plan. HA has provided 250, 231 and 229 new beds in 2015-16, 2016-17 and 2017-18 respectively. To meet the growing demand arising from the growing and ageing population, HA will open a total of 574 additional beds in 2018-19.

The HA will regularly monitor and review the utilisation rates and demand trend of various healthcare services. It will also enhance the service capacity, undertake hospital development projects and implement other suitable measures to ensure that public healthcare services can meet the public needs.

(2) Medical facilities occupy mainly "Government, Institution or Community" (G/IC) land. The estimates on the future G/IC land requirement in "Hong Kong 2030+: Towards a Planning Vision and Strategy Transcending 2030" (Hong Kong 2030+) are mainly categorised into two broad types. The first is the major special facilities, which are those facilities supported by specific policies and are not tied to population level according to the Hong Kong Planning Standards and Guidelines (HKPSG). These land requirements are provided by

relevant policy bureaux. Table 3-1 of the topical paper "Consolidated Land Requirement and Supply Analysis" (Topical Paper), prepared for Hong Kong 2030+, summarises the land requirement assessment regarding these major special facilities. Medical facilities in the table mainly include a Chinese medicine hospital and testing and quarantine facilities as mentioned in the question. The link to the Topical Paper is as follows:

[www.hk2030plus.hk/document/Consolidated%20Land%20Requirement%20and%20Supply%20Analysis\\_Eng.pdf](http://www.hk2030plus.hk/document/Consolidated%20Land%20Requirement%20and%20Supply%20Analysis_Eng.pdf).

The second type is population-based facilities, which generally refer to those having population-based requirements under HKPSG, including schools, district recreational facilities, medical facilities, etc. For these facilities, we mainly adopted the land/person ratio to estimate their future land requirements. With reference to the recommended planned provisions of relevant facilities for the Kwu Tung North New Development Area, a 3.5 square meters land/person ratio is adopted in the aforementioned Topical Paper. The estimated G/IC land requirement calculated according to the above ratio is about 343 hectares, including population-based medical facilities, such as the land requirement arising from general hospitals, clinics and community health centres.

---

## LCQ16: Aviation security at Hong Kong International Airport

Following is a question by the Hon Kenneth Leung and a written reply by the Secretary for Security, Mr John Lee, in the Legislative Council today (June 13):

Question:

Pursuant to the guidelines of the International Civil Aviation Organization, the Hong Kong International Airport has implemented new security requirements for cabin baggage since March 21, 2007. Such requirements include: all travellers carrying liquids, gels and aerosols should have them carried in containers with a capacity not greater than 100 ml; any container with a capacity greater than 100 millilitres (ml), even if it is not fully filled with the aforesaid articles, will not be accepted. Travellers who carry with them articles which do not meet the aforesaid requirement must follow the instructions of security screening officers at the security screening check point by either discarding such articles or checking in the baggage concerned before they may pass the security screening. In this connection, will the Government inform this Council:

(1) of the number of cases in each of the past five years in which travellers insisted on carrying on board an aircraft articles which did not meet the

aforesaid requirement; the procedure followed by security screening officers in handling such cases;

(2) whether the travellers mentioned in (1) committed any criminal offence; if so, of the penalty concerned, as well as the respective numbers of prosecutions and convictions in each of the past five years and the penalties imposed on the convicted persons; and

(3) whether a mechanism is in place to (i) ensure that security screening officers perform duties pursuant to the law and (ii) review the workflow at the security screening check point on a regular basis to ensure that there is no security loophole; if so, of the details; if not, the reasons for that?

Reply:

President,

The Government attaches great importance to the aviation security at the Hong Kong International Airport (HKIA). According to the requirements of the International Civil Aviation Organization (ICAO), all liquids, aerosols and gels (LAGs) carried by passengers shall be contained in containers with capacity not exceeding 100 millilitres (ml). Any container with a capacity greater than 100 ml, even if it is only partially filled with LAGs, must not be brought into the restricted area of the airport. The requirement is applicable to the HKIA, and the Airport Authority Hong Kong (AAHK) is responsible for its implementation, to ensure that the LAGs carried by all passengers comply with the said requirement.

Based on the information provided by the Civil Aviation Department (CAD) and the AAHK, my reply to Hon Kenneth Leung's question is as follows:

(1) & (2) The AAHK, responsible for the operations of the HKIA, shall ensure that the cabin baggage carried by all departing passengers complies with the relevant security requirements of the ICAO. If a passenger is found carrying any container with a capacity exceeding 100 ml with LAGs inside, the security personnel will take out the relevant item, display to the passenger an information sheet containing the relevant security requirement, and advise the passenger how the item may be handled, including disposal at the scene or returning the item to the airline's check-in counter for checking in as hold baggage, etc., and the passenger should not be allowed to carry such an item into the restricted area of the airport. This security requirement is a direction given by the Director-General of Civil Aviation to the AAHK pursuant to section 37(1)(a) of the Aviation Security Ordinance (Cap 494). The AAHK must implement it as required by the law. For the incident on May 21, 2018, the CAD has requested the AAHK to submit a report, so as to ensure the LAGs carried by all passengers fulfil the requirement of the ICAO, and prevent recurrence of similar incidents. According to the information provided by the AAHK and its subsidiary, the Aviation Security Company Limited (AVSECO), there was no record of other similar incidents in the past five years.

(3) For any aviation security-related incident at the airport, the AVSECO as the aviation security service provider at the airport will conduct investigation and submit a report to the AAHK, including whether human errors were involved, and how the case was handled. Upon examination of the report, the AAHK will submit a report to the CAD, including recommendations and improvement measures to prevent recurrence of similar incidents. The CAD will also proactively initiate audits on compliance with the aviation security requirements. If it is discovered that an organisation does not fully fulfil the security requirements issued by the CAD, the latter will require the organisation to submit and implement improvement plans.
