

China sees biggest overseas returning wave in recent years

Chinese students celebrate their graduation from Columbia University on May 20, 2015. [photo/Xinhua]

At the National Science and Technology Awards Conference held in Beijing on January, 2017, Ren Xiaobin and his team won the second prize in the 2016 National Natural Science Award.

“It is the best time to do scientific research in China,” said Ren. “China has a larger stage which provides more chances and room for growth. We can expand our ability and achieve greater value of life.”

No one would expect Ren to achieve so much from nothing in only nine years. As one of the second batch of experts enlisted in the national “Recruitment Program of Global Experts”, or Thousand Talents Program, he returned from Japan to establish the Frontier Institute of Science and Technology in Xi’an Jiaotong University and lead a group of young people to conduct research on intelligent material.

Ren is just one of the many outstanding examples of many overseas returnees. Since the program was introduced in 2008, more than 40,000 high-level talents have come back to homeland and have found jobs.

The number of returnees at professor level has been more than 20 times than that of the total number between 1978 and 2008, forming the biggest overseas returning wave since the founding of the People’s Republic of China.

"We are close to realizing the Chinese Dream of the great rejuvenation of the Chinese nation than any time in the history and we are eager for talents than any time in the history," said President Xi Jinping at the 100th anniversary of the founding of the Western Returned Scholars Association.

"Most overseas Chinese want to come back to China," said Wang Huiyao, vice-president of the Western Returned Scholars Association.

As China is improving its national strength, the ratio of the number of going abroad and returning people has fallen from 3.15:1 in 2006 to 1.28:1 in 2015. Talents are coming back at an unprecedented speed.

According to official statistics, more than 70 percent of project leaders working at key national research projects are overseas returnees. A large number of academicians at Chinese Academy of Sciences and at China Academy of Engineering are overseas returnees.

Experts estimate that China will transform from the biggest brain drain country into one of the main brain reversal countries in the world in five years.

The change of research environment is a major reason why overseas scholars are choosing to do research in China.

Shao Feng is in charge of a laboratory named after his name at the National Institute of Biological Sciences, Beijing. Two months ago, a research paper produced by his laboratory was published by world-known medical magazine Nature Microbiology, achieving a major breakthrough in the field of bioscience.

Shao said the key to success is that the laboratory is run in a similar mode to international scientific research institutes, breaking the constraints such as budget report, assessment standard, which are usually seen in the traditional management of scientific research.

Favorable policies, exploding high-tech industry, innovative atmosphere and sustainable investment are appealing to more and more overseas students.

Currently, there are more than 300 overseas returnees' pioneer parks and about 24,000 enterprises in the parks across the country, with about 24,000 overseas returnees being employed.

"Many ask me why I came back. My answer is simple: I'm still young and I want to pursue my dream," said Zhu Xiang, 30, who turned down the offer of a research institute in France to start his own business in China.

Zhu with his friends established a mobile medical platform at an incubator in Tsinghua University and now has millions of users. He thinks the fast-growing China now has a very good platform for overseas returnees to realize their aspiration.

Home schooling without permission illegal

The Education Ministry released a notice on its website on Wednesday, stressing that parents or guardians are not allowed to educate children at home without permission from education authorities.

According to the Compulsory Education Law, all school-age children must attend primary and junior middle school.

Schools and local education authorities shoulder the responsibility of finding those children who do not go to school and persuading them to attend, the notice said.

“For children who cannot attend school due to reasons such as poor physical health, their parents or guardians should report to the local education authorities and ask for a delay in enrollment,” the notice said.

“They cannot give children home schooling as a substitute for school education if they fail to gain permission from the authorities.”

The notice was released against a backdrop of an increasing number of students being educated at home or attending small, private teaching institutes.

Research conducted by the 21st Century Education Research Institute estimated that the number of children who receive home schooling rather than attending school in China has risen from 2,000 in 2013 to 6,000 today.

Wang Jiajia, who led the research, said the legality of home schooling had long been controversial in China, but that the increasing number of parents and children wanting to do so demonstrated that the unified, standardized education provided in the nation's schools cannot meet everyone's needs.

Infectious diseases kill 18,000 Chinese in 2016

Infectious diseases killed 18,237 people on the Chinese mainland in 2016, according to official data revealed Thursday.

In 2016, there were more than 6.9 million cases of infectious diseases

reported on the mainland, according to the National Health and Family Planning Commission.

Of that total, one case of pestilence and 27 of cholera, both Class A infectious diseases, were reported but did not lead to fatalities.

More than 2.9 million cases were classified as Class B infectious diseases, which resulted in 17,968 deaths. HIV/AIDS, tuberculosis, rabies, hepatitis, and human infection of H7N9 avian influenza accounted for 98.8 percent of deaths in this category.

Category C diseases were responsible for more than 3.9 million cases and 269 deaths. Foot and mouth disease, infectious diarrhea, and influenza were the most prevalent in this category, accounting for 98.5 percent of deaths.

[China to step up property tax legislation: official](#)

China will move more swiftly in legislating a long-discussed property tax law, an official said on Thursday.

"It is a major task in China's tax reform determined by policymakers, and the lawmaking process will be accelerated," Lu Kehua, vice minister of housing and urban-rural development, said when answering questions on progress on the tax law during a press conference.

Related government agencies and legislators are carrying out work according to the plan, Lu added.

China has pushed forward the work for years, but progress has remained slow. A trial property tax has been introduced in Chongqing and Shanghai.

The law will fill the gap in taxing home ownership, as China's current housing tax mechanism mainly taxes development and property sales.

[Former Shanghai vice mayor stands trial for graft](#)

Former vice mayor of Shanghai Ai Baojun on Thursday stood trial on charges of corruption at a court in the city of Zhangzhou, east China's Fujian Province.

Prosecutors alleged that from 2002 to 2014, Ai, a former member of the Standing Committee of the Communist Party of China Shanghai Municipal Committee, took advantage of various official positions to help agencies and individuals with business operations and development, among other offences.

Ai was said to have accepted bribes worth more than 43.2 million yuan (6.28 million U.S. dollars) either personally or through his family.

In addition, he was accused of taking advantage of his positions to embezzle public assets worth more than 7.5 million yuan from 2001 to 2009.

Ai pleaded guilty and expressed remorse.

More than 40 people, including Ai's family, representatives of legislators and political advisors at national and local levels, as well as journalists and members of the public, were present at the open trial.

The verdict will be announced at a later date.
