

Psychiatrists jump ship along with patients

The Chinese community has been shocked by an outrageous case of psychiatrists “running away” from a hospital, along with 64 patients over the weekend.

The Guihang 300 Hospital released an announcement on its official website Saturday, declaring that 64 patients being treated at the hospital had left, led by the director of psychiatry, Yang Shaolei, without informing the patients' families or going through any formal procedures. Meanwhile, 11 other staff members of the psychiatry department had quit before getting official approval by the hospital, the announcement said.

The hospital immediately reported the incident to the police and later confirmed that the psychiatrists and patients had been transferred to Guiyang No.6 Hospital, according to the announcement.

“The hospital believes this is a planned incident that severely infringes on the patients' guardians' right to know and choose, maliciously offends the professional integrity of the medical staff, and tramples industry rules for healthy competition...” the hospital said, and it will “hold the involved medical staffers accountable according to the law”.

Fire kills 18 at massage parlor in E. China

At least 18 people have been killed and another two injured after a foot massage parlor caught fire in east China, local authorities said Sunday.

The fire broke out at around 5:26 p.m. Sunday in the Zuxintang Foot Massage Parlor in Tiantai County, Zhejiang Province, according to the county's publicity department. The fire was extinguished at about 7:05 p.m..

Eight people were found dead in the fire, while another 10 died in hospital after medical efforts failed, according to the department.

Pictures on microblog Sina Weibo show a building engulfed by heavy smoke and people jumping out of windows, while firefighters were trying to tame the blaze.

An investigation into the accident is under way.

PLA drill features advanced missile

The People's Liberation Army has released a video of a recent exercise employing the advanced DF-16 medium-range ballistic missile, a weapon seen as filling a gap in the nation's arsenal.

Several launch vehicles carrying the ballistic missiles were seen in the footage that the PLA published on its video website, released to show the training of Rocket Force missile brigade soldiers around the Spring Festival holiday.

The participating units handled a number of scenarios, including chemical/biological contamination, countering satellite reconnaissance and electronic jamming. The crews practiced multiple maneuvers, such as rapid loading, redeployment and launch sequence, though the video showed no missile actually being launched.

Two types of DF-16 that appeared in the exercise are the bullet-shaped missile that is considered the original DF-16 and a new variant that features a maneuverable warhead and several extra fins.

The video represents the third time the DF-16 has been shown to the public. The missile made its debut at a military parade in Beijing in September 2015. In July, a television news program showed General Fan Changlong, a vice-chairman of the Central Military Commission, inspecting a DF-16 unit of the Southern Theater Command.

Though the PLA has never disclosed its ballistic missiles' specifications, experts said the DF-16 poses a challenge to foreign military installations along the first island chain, which is what the Chinese military calls the series of islands that stretch from Japan in the north to China's Taiwan and the Philippines to the south.

Xu Guangyu, a retired major general and now a strategy researcher, said that DF-16 has a strike range of more than 1,000 kilometers, filling the gap that previously existed with the absence of a medium-range ballistic missile in the PLA's arsenal. He said the missile also is able to reach Okinawa, a Japanese island about 400 km from China's Diaoyu Islands.

Shi Hong, executive editor of Shipborne Weapons, said the DF-16 was developed by China Aerospace Science and Industry Corp based on the DF-11 short-range ballistic missile and can carry a warhead of at least 500 kg. The missile has a strike accuracy as good as that of a cruise missile, Shi said. It is also able to maneuver in its final stage to penetrate enemy defensive firepower, he said.

Other PLA Rocket Force brigades also mobilized their DF-11, DF-15 and DF-21C ballistic missiles during training around Spring Festival, according to PLA media outlets.

In another development, Washington Free Beacon, a news website in the United

States that specializes in military affairs, reported on Jan 31 that China conducted the first flight of the DF-5C intercontinental ballistic missile in January. The missile carries 10 multiple independently targetable re-entry vehicles. The DF-5C is the latest variant of the three-decade-old DF-5 family, the report said.

An unidentified officer from the Defense Ministry's Information Bureau reached by Shenzhen TV on Saturday would neither confirm nor deny the DF-5C test, but said such tests are not aimed at any foreign nation or specific target.

Kunming airport warns drone owners to steer clear

Drones have been found at the clearance protection zone of an airport in southwest China's Yunnan Province, and local police are investigating.

Sources with Kunming Changshui International Airport in the provincial capital said Sunday that there were four or five incidents in the past two days of drones flying close to the airport.

"Regulations stipulate that unmanned balloons, kites, gliders and parachutes are not allowed within the clearance protection zone, about 1,028 square

kilometers surrounding the runway,” an official said. “Those who violate the regulations are subject to fines up to 100,000 yuan (about 14,600 U.S. dollars).”

The flying of drones could pose a threat to aviation safety, though the incidents reported did not disrupt flights at the airport.

Experiment zone in Qinghai to protect Tibetan culture

The Ministry of Culture has agreed to build an experiment zone in China's northwestern Qinghai Province to protect Tibetan ecological and cultural heritage.

According to Wang Dongmei, head of the culture and sports bureau in the Yushu

Tibetan Autonomous Prefecture in Qinghai, the zone will cover the city of Yushu and its adjacent counties.

On the zone's protection list are the physical and cultural heritage items related to the local Tibetan people in the Sanjiangyuan area, which is home to the headwaters of the Yangtze, Yellow, and Lancang (Mekong) rivers, Wang said.

Yushu is home to seven national-level cultural heritage sites, 29 provincial-level sites as well as two historical villages. The song and dance, costumes of ethnic minorities, and metal forging techniques are all listed as intangible heritage in China.

Wang told Xinhua that Yushu has eleven national items of intangible heritage and 24 national "cultural inheritors."

"The experiment zone will help boost protection of Tibetan culture and local ecology as a whole, and sustainable development of the society and economy," said Tsering Teg, governor of Yushu.

Yushu has recovered from a magnitude 7.1 earthquake that hit the region on April 14, 2010. It affected 246,800 people, leaving 2,220 dead and more than 100,000 homeless.
