

Employers and employees should take precautions during cold weather

Attention duty announcers, radio and TV stations:

Please broadcast the following special announcement immediately, and repeat it at frequent intervals when the Cold Weather Warning is in force:

The Labour Department reminds employers that as the Cold Weather Warning is in force, they should take appropriate precautions such as reminding employees who have to work outdoors or in remote areas to wear appropriately warm clothing, and make arrangements for employees to rotate from outdoor to indoor or sheltered work sites as far as possible. Employees should take note of the weather report, wear appropriately warm clothing and be mindful of their health conditions. They should notify their supervisors and seek medical help immediately if feeling unwell, such as having cold limbs and body shivering.

CHP reminds public on precautions against cold weather

The Centre for Health Protection (CHP) of the Department of Health (DH) today (January 3) reminded the public, particularly the elderly and people with chronic illnesses, to adopt appropriate measures to protect their health in view of the cold weather.

A spokesman for the CHP said that cold weather can easily trigger or exacerbate diseases, especially among the elderly and persons suffering from heart disease, respiratory illness or other chronic illnesses.

"Elderly people have less insulating fat beneath their skin to keep them warm and their body temperature control mechanism may be weaker. Their body may not be able to appropriately respond to the cold weather," the spokesman said.

Some senior persons may have decreased mobility, which can in turn slow down their ability to generate and conserve body heat. Chronic illnesses, such as hypertension, diabetes and endocrine disorders, may undermine the health of elderly people and lower their metabolic rate, subsequently causing their body to generate less heat.

The CHP reminded the public, in particular the elderly and persons with chronic illnesses, to adopt the following preventive measures:

- Take note of the weather forecast. Wear warm clothing, including hats, scarves, gloves and socks accordingly;
- Consume sufficient food to ensure adequate calorie intake;
- Perform regular exercise to facilitate blood circulation and heat production;
- Stay in a warm environment and avoid prolonged outdoor exposure;
- Use heaters with care and maintain adequate indoor ventilation; and
- Seek medical advice if feeling unwell.

In addition, the public should avoid alcoholic beverages.

"Drinking alcohol cannot keep you warm. Alcohol accelerates the loss of body heat through dilated blood vessels, resulting in chilling instead," the spokesman said.

"Parents should ensure that babies are sufficiently warm, but it is also important to keep babies lightly clothed to avoid overheating them," the spokesman added.

Parents should observe the following safety measures when putting their children to bed:

- Keep the room well ventilated and with a comfortable temperature;
- Always place babies on their back to sleep. Babies usually sleep well without a pillow;
- Place babies on a firm and well-fitted mattress to sleep. Avoid soft objects and loose bedding;
- Leave their head, face and arms uncovered during sleep; and
- Let babies sleep in a cot placed in the parents' room and near their bed.

To prevent pneumonia and respiratory tract infections, members of the public should always maintain good personal and environmental hygiene. They should adhere to the following advice:

- A surgical mask can prevent transmission of respiratory viruses from ill persons. It is essential for persons who are symptomatic (even if having mild symptoms) to wear a surgical mask;
- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including performing hand hygiene before wearing and after removing a mask;
- Avoid touching your eyes, mouth and nose;
- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes, after touching public installations such as handrails or doorknobs, or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a litre of water into each drain outlet (U-trap) to ensure environmental hygiene;
- Cover all floor drain outlets when they are not in use;
- After using the toilet, put the toilet lid down before flushing to avoid spreading germs;
- Wash hands with liquid soap and water, and rub for at least 20 seconds.

Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an effective alternative;

- Cover your mouth and nose with tissue paper when sneezing or coughing. Dispose of soiled tissues into a lidded rubbish bin, then wash hands thoroughly; and
- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.
- Receive seasonal influenza vaccination, which is recommended for all persons aged 6 months or above except those with known contraindications; and
- Persons at higher risk of getting influenza and its complications, including the elderly and children, should receive seasonal influenza vaccination early. Please see details of the vaccination programmes and scheme on the CHP's website.

Food-borne diseases, particularly those linked to hot pot cuisine, are also common in cold weather. The following preventive measures should be taken:

- Wash hands before handling and consuming food;
- Do not patronise unlicensed vendors or those with poor hygienic standards while selecting food;
- Wash and cook all food thoroughly;
- Vegetables should be washed thoroughly in clean running water before cooking and consumption. When appropriate, scrub vegetables with hard surfaces with a clean brush to remove dirt and substances, including pesticide residues and contaminants, from the surface and crevices;
- Shrimps should be fully cooked by cooking them until the shells turn red and the flesh turns white and opaque;
- For shellfish like scallops and geoduck, scrub the shells thoroughly and remove internal organs;
- Most hot pot ingredients should be stored in a refrigerator at 4 degrees Celsius or below, while frozen food should be stored in a freezer at -18 degrees C or below;
- Never use raw eggs as a dipping sauce for hot pot; and
- Use different sets of chopsticks to handle raw and cooked food to avoid cross-contamination.

In addition, the public should not use charcoal as a cooking fuel in poorly ventilated areas, especially indoors, to avoid harmful exposure to carbon monoxide (CO) and prevent CO poisoning. While using other kinds of fuel, the public should also ensure adequate ventilation.

For more health information, the public may call the DH's Health Education Hotline (2833 0111) or visit the [CHP's website](#) and [Facebook Fanpage](#).

The public may also call Dial-a-Weather (1878 200) or visit the website of the [Hong Kong Observatory](#) for the latest weather information and forecast, or its page on [Weather Information for Senior Citizens](#).

Yellow fire danger warning

Attention duty announcers, radio and TV stations:

Yellow fire danger warning

The fire danger situation today (January 3) is yellow and the risk of fire is high. People are urged to prevent fires breaking out and hikers should also be vigilant.

Nearly 60 per cent of people comply with compulsory testing notices to undergo testing

According to the compulsory testing notices published on December 30 and 31, 2020, the Government has arranged mobile specimen collection stations or other testing facilities for the 43 specified premises to provide testing for persons covered by the compulsory testing notices.

According to the Home Affairs Department (HAD)'s records, as at 5pm today (January 2), a cumulative total of over 35 000 persons who are required to undergo compulsory testing have undertaken the test via the abovementioned specimen collection stations or testing facilities, which accounts for nearly 60 per cent of the estimated number of residents of corresponding buildings covered by the testing notices. In addition, the HAD understands that some people may choose to undergo testing via other routes as specified in the testing notices.

The HAD thanks the many residents who had complied with the compulsory testing notices for their co-operation to fight against the virus together. The HAD is also grateful for the efforts and support by the relevant government departments and colleagues, as well as the testing contractors and their staff, to carry out the testing for the public.

The HAD appeals to members of the public who are required to undergo testing according to the compulsory testing notices to undergo testing at the testing centers as soon as possible within the period specified (i.e by January 4, 2021) in the compulsory testing notices.

The HAD reminds the public again that the Government will take resolute follow-up action to ensure compliance to all testing notices.

The COVID-19 virus is high in transmissibility. Although many patients are asymptomatic, they still infect people around them. Therefore, participating in testing is a responsible act for oneself, family members as well as the community. The Government appeals to the public to undergo testing in compliance with the notice. Any person who fails to comply with the testing notice commits an offence and may be fined a fixed penalty of \$5,000. The person would also be issued with a compulsory testing order requiring him/her to undergo testing within a specified timeframe. Failure to comply with the order is an offence and the offender would be liable to a fine of \$25,000 and imprisonment for six months.

CHP investigates 35 additional confirmed cases of COVID-19

The Centre for Health Protection (CHP) of the Department of Health (DH) announced that as of 0.00am, January 2, the CHP was investigating 35 additional confirmed cases of coronavirus disease 2019 (COVID-19), taking the number of cases to 8 924 in Hong Kong so far (comprising 8 923 confirmed cases and one probable case).

Among the newly reported cases announced, one had a travel history during the incubation period.

A total of 919 cases have been recorded in the past 14 days (December 19 to January 1), including 843 local cases of which 310 are from unknown sources.

The CHP's epidemiological investigations and relevant contact tracing on the confirmed cases are ongoing. For case details and contact tracing information, please see Annex or the list of buildings with confirmed cases of COVID-19 in the past 14 days and the latest local situation of COVID-19 available on the website "COVID-19 Thematic Website" (www.coronavirus.gov.hk).

Meanwhile, the CHP reminded those who had visited the specified venues under the Prevention and Control of Disease (Compulsory Testing for Certain Persons) Regulation (Cap. 599J) to receive COVID-19 nucleic acid test according to the compulsory testing notice. The public are also urged to seek medical attention early if symptoms develop.

Regarding the severe epidemic situation, the CHP called on members of the public to avoid going out, having social contact and dining out. They should put on a surgical mask and maintain stringent hand hygiene when they need to go out. The CHP strongly urged the elderly to stay home as far as possible and avoid going out. They should consider asking their family and

friends to help with everyday tasks such as shopping for basic necessities.

The spokesman said, "Given that the situation of COVID-19 infection remains severe and that there is a continuous increase in the number of cases reported around the world, members of the public are strongly urged to avoid all non-essential travel outside Hong Kong.

"The CHP also strongly urges the public to maintain at all times strict personal and environmental hygiene, which is key to personal protection against infection and prevention of the spread of the disease in the community. On a personal level, members of the public should wear a surgical mask when having respiratory symptoms, taking public transport or staying in crowded places. They should also perform hand hygiene frequently, especially before touching the mouth, nose or eyes.

"As for household environmental hygiene, members of the public are advised to maintain drainage pipes properly, regularly pour water into drain outlets (U-traps) and cover all floor drain outlets when they are not in use. After using the toilet, they should put the toilet lid down before flushing to avoid spreading germs."

Moreover, the Government has launched the website "COVID-19 Thematic Website" (www.coronavirus.gov.hk) for announcing the latest updates on various news on COVID-19 infection and health advice to help the public understand the latest updates. Members of the public may also gain access to information via the COVID-19 WhatsApp Helpline launched by the Office of the Government Chief Information Officer. Simply by saving 9617 1823 in their phone contacts or clicking the link wa.me/85296171823?text=hi, they will be able to obtain information on COVID-19 as well as the "StayHomeSafe" mobile app and wristband via WhatsApp.

To prevent pneumonia and respiratory tract infections, members of the public should always maintain good personal and environmental hygiene. They are advised to:

- Wear a surgical mask when taking public transport or staying in crowded places. It is important to wear a mask properly, including performing hand hygiene before wearing and after removing a mask;
- Perform hand hygiene frequently, especially before touching the mouth, nose or eyes, after touching public installations such as handrails or doorknobs, or when hands are contaminated by respiratory secretions after coughing or sneezing;
- Maintain drainage pipes properly and regularly (about once a week) pour about half a litre of water into each drain outlet (U-trap) to ensure environmental hygiene;
- Cover all floor drain outlets when they are not in use;
- After using the toilet, put the toilet lid down before flushing to avoid spreading germs;
- Wash hands with liquid soap and water, and rub for at least 20 seconds. Then rinse with water and dry with a disposable paper towel. If hand washing facilities are not available, or when hands are not visibly soiled, performing hand hygiene with 70 to 80 per cent alcohol-based handrub is an

effective alternative;

- Cover your mouth and nose with tissue paper when sneezing or coughing. Dispose of soiled tissues into a lidded rubbish bin, then wash hands thoroughly; and

- When having respiratory symptoms, wear a surgical mask, refrain from work or attending class at school, avoid going to crowded places and seek medical advice promptly.
