

[Caroline Lucas calls for Select Committee on Climate Change after “vague” speech by Gove](#)

26 November 2018

Responding to Michael Gove's [speech](#) on the latest climate change projections, Green Party MP Caroline Lucas said:

“These projections paint a devastating picture of what climate breakdown means for the UK if we continue down the path we’re on. Michael Gove’s vague talk of mitigating the worst impacts of floods, droughts and storms are far from reassuring.

“It’s increasingly clear the Government isn’t going to embark on the urgent economic transformation we need to secure our futures. It’s now up to Parliament to create a Select Committee on Climate Change to pile pressure on ministers and chart a course out of this crisis.

“Those MPs must urgently begin drafting legislation to impose absolute limits on our use of resources and outlaw wasteful product designs. They must measure the Government’s success according to people’s quality of life and the health of our ecosystems – not economic growth. And they must set out binding plans to ensure people can thrive as we reimagine our society.”

[Green deputy leader selected as Newport West candidate](#)

23 November 2018

*** Amelia Womack selected as Newport West candidate in event of snap General Election**

*** Newport born and raised Womack pledges to give voters a “real alternative to the status quo”**

*** Womack: “Newport has been overlooked and left behind for too long”**

Green Party of England and Wales deputy leader Amelia Womack has been selected as the party’s candidate in Newport West in the event of a by-election or snap general election.

The announcement follows news that Newport West MP Paul Flynn will stand down at the earliest opportunity. [1]

Womack, who was born and raised in Newport, has pledged to bring green jobs to her hometown, support local businesses and champion environmentally sustainable alternatives to the M4 motorway expansion.

After being elected as Green Party deputy leader in 2014, Womack stood for Cardiff Central in the 2016 Welsh Assembly election.

The local party in Newport selected Womack as the Newport West Parliamentary candidate at a meeting on the evening of Thursday 22 November.

Amelia Womack, deputy leader of the Green Party of England and Wales, said:

“Newport has been overlooked and left behind for too long. I’m honoured to have been selected to represent the Green Party in my hometown and am excited to get stuck in and give voters a real alternative to the status quo.

“I have seen first hand the impact decades of underinvestment have had on Newport and am committed to securing new clean, sustainable jobs to help revitalise our forgotten local economy.

“With plans for toxic sludge to be dumped just down the coast the need for fearless, independent Green voices to stand up for our city has never been greater. I pledge to oppose the short-term thinking behind plans for the polluting M4 expansion, and will fight for the protection of Newport’s local environment to be at the heart of all decisions made for our city.” [2] [3]

[Caroline Lucas: Flights to Cornwall will accelerate climate disaster](#)

22 November 2018

The Green Party has responded to the [Government's announcement of new flights between Heathrow and Cornwall](#).

Caroline Lucas said MP: "The world's top scientists say we've got 12 years to avoid climate catastrophe.

"Yet this Government appears to be doing all it can to accelerate disaster. These extra flights will add to noise, air pollution and climate-wrecking emissions – all for the benefit of a tiny minority.

"Chris Grayling should be investing in improving creaking rail links to Cornwall – not wasting public money on damaging domestic flights."

[Caroline Lucas: "This isn't a parlour game for the Westminster class"](#)

15 November 2018

Responding to the Prime Minister's statement on the Brexit deal, Green Party MP Caroline Lucas said: "The Prime Minister knows the maths – her deal is never going to get through the Commons, and no deal would be an unmitigated disaster.

"We now risk chaos – job losses, businesses going under, crisis for our NHS, families divided and environmental rules torn up. That was never the will of the people.

"This isn't a parlour game for the Westminster class. MPs are playing with people's real lives.

"At this moment of conscience we must put aside party politics. Parliament

must give control back to the public and deliver a People's Vote."

[Bristol Greens declare climate emergency and bring city's CO2 emissions target forward 20 years](#)

13 November 2018

A Green party motion calling on the Mayor of Bristol to declare a climate emergency and bring the city's carbon neutrality target forward by 20 years (to 2030) passed in a Full Council meeting this evening (Tuesday 13 November) with support from councillors of all parties, committing Bristol to the most ambitious climate change target out of all UK Core Cities.

The motion, submitted by Councillor Carla Denyer, was inspired by the recent IPCC report which warned that humanity has 12 years to take emergency action in order to prevent global warming greater than 1.5°C. Above this, the risks to humanity of floods, droughts, extreme heat and poverty become much greater, impacting on hundreds of millions more people.(2) The motion text notes the progress already made by Bristol Council, and argues that as a former European Green Capital, Bristol has an important role to play in leading the UK in reducing carbon emissions as fast as possible. It asks the city's Mayor Marvin Rees to declare a Climate Emergency and pledge to make Bristol carbon neutral by 2030 (bringing forward the current target by 20 years), call on national government for more powers and resources to support this, work with partners in Bristol and other governments both in the UK and nationally to prevent climate change above 1.5°C, and to report back in six months on the actions that will be taken to address the emergency.

Councillor Denyer said:

"This is a fantastic day for Bristol and I'm delighted the Council will be bringing forward its target for carbon neutrality to 2030. The IPCC report made it clear that time to preserve Earth as we know it is running out. We can't wait for the UN or national governments to negotiate when we have just 12 years to act – we have to show how it's done and commit to ambitious action at the level of cities, which we did this evening.

"I'm grateful to my colleagues in the Green Group, who supported me in bringing this motion to council and leading the other political groups in the right direction, to those councillors from other parties who saw the importance of taking action, and to the public who did a fantastic job submitting statements and emailing their councillors in support of this motion. Thanks to all of you, Bristol is now leading the rest of the UK on climate change."

Councillor Steve Clarke, who seconded the motion, said he was overjoyed by the outcome and added:

"The next step is to ensure that this evening's commitments are followed by ambitious action. Over the coming years, Greens will continue to hold Bristol Council to account on today's decision, no matter what party is in power. We know that 2030 is a big commitment for the city and to meet this target an awareness of carbon emissions will have to factor into every decision the Council takes. We look forward to the Mayor reporting back to us in 6 months on what action he will take."

Background:

Full text of the motion is attached [here](#). Actions that the Council could take might include involving carbon reduction in every decision the Council takes, stepping up the electrification of its vehicle fleet, requiring higher energy efficiency standards for new development, putting further work into reducing food waste across the city, working with city partners to encourage lower emissions and reviewing contradictions, for example the Mayor's support for the expansion of Bristol Airport.

The IPCC report (available [here](#)) focusses on the impact that 1.5°C would have on the planet compared to 2°C. Some of the key findings were:

- Insects and plants were almost twice as likely to lose half their habitat at 2°C compared with 1.5°C warming
- Coral populations would be wiped out at 2°C warming but more than 10% would have a chance of surviving at the lower temperature
- Global fish stocks would lose 3 million tonnes at 2°C, twice the decline of 1.5°C, due to lower oxygen levels and greater acidity in the ocean
- Hundreds of millions more people, particularly in less developed countries, would be at risk of climate-related poverty with a 2°C increase
- The global population exposed to water stress would be 50% lower with 1.5°C warming
- At current levels, the world is on course for 3°C of warming

The motion was supported by Climate activists [Rising Up](#), who organised the prominent Extinction Rebellion protests in London and protested outside Bristol Council before the meeting.
