

Faced with 'clear science, real threats' countries must remain committed to Paris climate deal – UN

23 March 2017 – Climate change is an unprecedented and growing threat to peace, prosperity and development and addressing it presents an economic opportunity for Governments and business, senior United Nations officials said today.

“We are dealing with scientific facts, not politics. And the facts are clear. Climate change is a direct threat in itself, and a multiplier of many other threats,” UN Secretary-General António Guterres told a General Assembly High-Level action event aimed at invigorating political momentum on climate change, highlighting its deep links to the UN 2030 Agenda on Sustainable Development.

Mr. Guterres said his messages to the meeting are simple.

“First, climate change is an unprecedented and growing threat – to peace and prosperity and the same in relation to the Sustainable Development Goals (SDGs). Second, addressing climate change is a massive opportunity that we cannot afford to miss,” he said.

The Paris Agreement on climate change adopted in December 2015 is unique in its universality, with every single government having signed it. The pact entered force in less than a year. To date more than 130 Parties have ratified it, and the numbers are growing monthly.

The countries that supported the Paris Agreement are the same that adopted the 2030 Agenda – they comprise all UN Member States.

The reason for this consensus is clear: all nations recognize that implementing the 2030 Agenda goes hand-in-glove with limiting global temperature rise and increasing climate resilience.

Mr. Guterres said that last year was once again the hottest on record. Sea ice is at a historic low and sea levels at a historic high. These trends are indisputable, he stressed, explaining that consequences of climate change include food insecurity, water scarcity, poverty and displacement.

Tackling climate change is a tremendous opportunity for Governments and

business as there is no trade-off between a healthy environment and a healthy economy.

“We can have both. Green business is good business,” he said.

Climate action is a necessity and can advance the attainment of sustainable development goals.

“How we go about it can be the subject of scientific and political debate. But there is no question that we must act, urgently and decisively, now,” Mr. Guterres said. “And it remains the only viable way to safeguard peace, prosperity and a sustainable future.”

Also addressing the event, were Peter Thomson, President of the General Assembly, and Patricia Espinosa, Executive Secretary of the UN Framework Convention on Climate Change.

Still possible to bend curve on climate change trajectories

Mr. Thomson said that he had recently met with Petteri Taalas, the Secretary-General of the UN World Meteorological Organization (WMO), who confirmed that the world is currently on track towards a 3 to 4°C increase in global temperatures.

“I have always understood [...] that once we reach the 3°C – 4°C range, humanity’s survival on this planet will be put in jeopardy,” he said.

Cyclone Winston and Cyclone Pam which devastated Fiji and Vanuatu in recent years were among the strongest tropical cyclones to ever make landfall in the Southern Hemisphere. Fiji, an island nation from which Mr. Thomson hails, has already begun relocating low-lying villages to higher ground, away from the encroaching shoreline and the rising threat of storm surges.

“While the prognosis is dire, the scientific community assures us it is possible to bend the curve on current trajectories, if we work together to curb the growth of global greenhouse gas emissions,” Mr. Thomson said, reiterating his call for all parties to the Paris Agreement to ratify it without delay and for those that have already done so to deliver on their commitments.

[UN atomic agency co-hosts international meeting on cancer in developing countries](#)

22 March 2017 – Cancer can be a death warrant in some developing countries,

spurring the United Nations atomic agency and the international community today to hold a high-level discussion on how to get more funding and support for treatment to parts of Africa, the Middle East and South Asia.

The rising tide of cancer calls for additional human and financial resources, as well as infrastructure, Nelly Enwerem-Bromson, Director of the Programme of Action for Cancer Therapy at the UN International Atomic Energy Agency (IAEA) said at the meeting in the Sudanese capital of Khartoum. He spoke alongside Sudanese Vice-President Hassabo Mohammed Abdalrahman, who opened the meeting.

The event, co-organized by the IAEA and the Sudanese Government, brought together health and finance representatives from 16 Governments to discuss their funding proposals on how to better detect and treat breast and cervical cancer, and develop nuclear medicine and radiotherapy as part of national cancer control programmes.

Each year, 8.8 million people die from cancer, mostly in low- and middle-income countries, according to figures from the World Health Organization (WHO). The figure is so high that it accounts for two and a half times more people killed than those who die from HIV/AIDS, tuberculosis and malaria combined.

Cervical cancer is particularly deadly and disproportionately affects women in developing countries, where 83 per cent of all new cases occur, IAEA reported.

One of the plans discussed proposes to establish a permanent screening centre in Cameroon, where 1,400 new women are diagnosed with cervical cancer each year, and 700 die.

The meeting also reviewed a proposal to expand cancer services for low-income people in Jordan, including refugees. The only public radiotherapy facility is in the capital, Amman, which treats around 50 patients per day.

The Governments represented at today's meeting are members of the IAEA, the Organization of Islamic Cooperation (OIC), and the Islamic Development Bank.

Other institutions present included the African Development Bank, the Arab Bank for Economic Development in Africa and the WHO.

[DR Congo: UN, partners need urgent aid for over 370,000 displaced in south-](#)

east province

22 March 2017 – Intercommunal violence in south-eastern Democratic Republic of the Congo has forced hundreds of thousands of people from their homes, a top United Nations aid official in the country has said, warning that the current response is being outstripped by the needs.

“Unless peaceful coexistence is fully restored between the two communities, humanitarian needs will continue to spiral out of control,” said the Humanitarian Coordinator in the Democratic Republic of the Congo (DRC), Mamadou Diallo, wrapping up a three-day visit to the region on 20 March.

Some 370,000 people have fled the cascading violence across all six territories that make up the province, in the last nine months, the Office for the Coordination of Humanitarian Affairs (OCHA) estimated.

The insecurity has disrupted aid operations resulting in what Mr. Diallo called “among the most urgent humanitarian hotspots in a country experiencing a worsening humanitarian situation.”

The UN Humanitarian Coordinator led a group that included representatives from UN agencies, donors and non-governmental organizations to Tanganyika’s Kalemie and Manono territories.

In Kalemie, the delegation visited the Kalunga site, home to some 17,000 people, where UN partners are providing emergency water and health care services amidst ongoing shelter concerns.

“Speaking to the delegation, a displaced woman pleaded for education projects for the thousands of children living in the site, to avoid their further marginalization,” OCHA said.

The group then visited the Kamala site in Manono “considered the cradle of the intercommunal conflict” where “the delegation saw first-hand the burned, destroyed huts of people forced to flee.

On behalf of the international humanitarian community, the UN asked for \$40 million to cover all the humanitarian needs, including \$20 million for the most urgent, life-threatening needs for the displaced families.

The DR Congo Common Humanitarian Fund and the UN Central Emergency Response Fund have recently allocated \$5 million each for the response, with the Humanitarian Fund planning an additional allocation of \$2 million.

The humanitarian concerns came as the Secretary-General’s Special Representative for DRC, Maman Sidikou, briefed the Security Council about the deteriorating security situation and the need to implement the 31 December agreement on the electoral process.

Under the agreement, President Joseph Kabila would stay in office until

elections are held by the end of 2017. During this period, a 'National Council for Overseeing the Electoral Agreement and Process (CNSAP)' would be set up, and a new prime minister named from opposition ranks.

'Nothing can grow without water,' warns UNICEF, as 600 million children could face extreme shortages

22 March 2017 – Warning that as many as 600 million children – one in four worldwide – will be living in areas with extremely scarce water by 2040, the United Nations children's agency has called on governments to take immediate measures to curb the impact on the lives of children.

In its report, *Thirsting for a Future: Water and children in a changing climate*, the UN Children's Fund (UNICEF) explores the threats to children's lives and wellbeing caused by depleted sources of safe water and the ways climate change will intensify these risks in coming years.

This crisis will only grow unless we take collective action now, said UNICEF Executive Director Anthony Lake in a news release announcing the report, launched on World Water Day.

But around the world, millions of children lack access to safe water – endangering their lives, undermining their health, and jeopardizing their futures, he added.

According to the UN agency, 36 countries around the world are already facing extremely high levels of water stress.

Warmer temperatures, rising sea levels, increased floods, droughts and melting ice affect the quality and availability of water as well as sanitation systems. These combined with increasing populations, higher demand of water primarily due to industrialization and urbanization are draining water resources worldwide. On top of these, conflicts in many parts of the world are also threatening access to safe water.

According to a recent UN-Water report, about two-thirds of the world's population currently live in areas that experience water scarcity for at least one month a year. Source: World Water Development Report 2017

All of these factors force children to use unsafe water, exposing them to deadly diseases like cholera and diarrhoea.

Many children in drought-affected areas spend hours every day collecting water, missing out on a chance to go to school. Girls are especially vulnerable to attack and sexual violence during these times.

However, the impact of climate change on water sources is not inevitable, noted the report, recommending actions to help curb the impact of climate change on the lives of children.

One of the points it raised is for governments to plan for changes in water availability and demand in the coming years and to prioritize the most vulnerable children's access to safe water above other water needs to maximize social and health outcomes.

It also called on businesses to work with communities to prevent contamination and depletion of safe water sources as well as on communities to diversify water sources and to increase their capacity to store water safely.

"Water is elemental – without it, nothing can grow," said Mr. Lake, urging for efforts to safeguard children's access to water.

"One of the most effective ways we can do that is safeguarding their access to safe water."

[ICC adds one year to Bemba's conviction for attempted bribery of witnesses](#)

22 March 2017 – The United Nations-backed International Criminal Court (ICC) today sentenced the former Congolese Vice-President, Jean-Pierre Bemba Gombo, to another year in prison and about \$325,000 in fines for interfering with his trial.

Judges ordered the that the sentence be served consecutively to Mr. Bemba's existing 18 year sentence for war crimes and crimes against humanity committed in the Central African Republic between October 2002 and March 2003.

In their ruling, the judges ordered the fine to be paid within three months to the ICC and then transferred to the Trust Fund for Victims, according to a press release.

Mr. Bemba, along with two of the four other people accused, were found guilty in October for having jointly committed the offences of intentionally corruptly influencing 14 defence witnesses, and presenting their false

evidence to the court.”

Mr. Bemba was also found guilty of soliciting the giving of false testimony by the 14 defence witnesses and attempting to corruptly influence two defence witnesses.

These charges were in addition to the main ruling issued in March 2016, in which the ICC found Mr. Bemba guilty beyond reasonable doubt on two counts of crimes against humanity (murder and rape) and three counts of war crimes (murder, rape and pillaging) committed in the Central African Republic in 2002-2003.

Mr. Bemba had been the commander-in-chief of the former Congolese rebel group, the Movement for the Liberation of Congo, as well as a vice-president of the Democratic Republic of the Congo during the 2003-2006 transition.
