

Vital for Sri Lanka to send message that 'impunity is no longer tolerated' underlines UN rights chief

22 March 2017 – Presenting an oral update on the rights situation in Sri Lanka, the top United Nations human rights official today said that a general lack of trust in the impartiality of the justice system in the country regarding past violations and continuing unwillingness or inability to address impunity reinforces the need for international participation in a judicial mechanism.

It is important for the country's future to send the signal that impunity is no longer tolerated, Zeid Ra'ad Al Hussein, the UN High Commissioner for Human Rights, told the UN Human Rights Council today.

For this to be credible, [the judicial mechanism] should include a special counsel, foreign judges and defence lawyers, and authorized prosecutors and investigators, he added, noting that national consultations had also identified international participation as a way to gain the trust of the victims.

He also said that while the design of truth and reparations processes appear to be underway, such efforts needed to be in consultation with victims and the civil society, and that the repeal of the terrorism prevention act and its replacement with legislation that complies with international human rights law is to be concluded.

Also in his remarks, the UN rights chief hailed the work of the civil society and human rights defenders in the country and underlined that they must be protected from harassment and intimidation.

Making particular reference to the reports of intimidation of members of civil society at the Palais des Nations (the UN Office at Geneva), the High Commissioner said that his office (OHCHR) would be looking into the issues closely.

He also called on the Sri Lankan Government to consult the independent commissions in the country, the Human Rights Commission, which he said play an invaluable role in strengthening good governance.

I encourage respect for their mandate and autonomy, adequate financing, and implementation of their recommendations, he added.

Mr. Zeid also welcomed a number of directives made by the President of Sri Lanka regarding detention but noted that reports of torture, excessive use of force and failure to respect due process are a cause for worry.

There is clearly a need for unequivocal instructions to all branches of the security forces that any such conduct is unacceptable and that abuses

will be punished, underlined the High Commissioner.

In conclusion, the UN rights chief said that victims should be kept at the centre of the efforts in the island nation and noted that justice for them was vital to ensure sustainable peace.

UN atomic agency co-hosts international meeting on cancer in developing countries

22 March 2017 – Cancer can be a death warrant in some developing countries, spurring the United Nations atomic agency and the international community today to hold a high-level discussion on how to get more funding and support for treatment to parts of Africa, the Middle East and South Asia.

The rising tide of cancer calls for additional human and financial resources, as well as infrastructure, Nelly Enwerem-Bromson, Director of the Programme of Action for Cancer Therapy at the UN International Atomic Energy Agency (IAEA) said at the meeting in the Sudanese capital of Khartoum. He spoke alongside Sudanese Vice-President Hassabo Mohammed Abdalrahman, who opened the meeting.

The event, co-organized by the IAEA and the Sudanese Government, brought together health and finance representatives from 16 Governments to discuss their funding proposals on how to better detect and treat breast and cervical cancer, and develop nuclear medicine and radiotherapy as part of national cancer control programmes.

Each year, 8.8 million people die from cancer, mostly in low- and middle-income countries, according to figures from the World Health Organization (WHO). The figure is so high that it accounts for two and a half times more people killed than those who die from HIV/AIDS, tuberculosis and malaria combined.

Cervical cancer is particularly deadly and disproportionately affects women in developing countries, where 83 per cent of all new cases occur, IAEA reported.

One of the plans discussed proposes to establish a permanent screening centre in Cameroon, where 1,400 new women are diagnosed with cervical cancer each year, and 700 die.

The meeting also reviewed a proposal to expand cancer services for low-income people in Jordan, including refugees. The only public radiotherapy facility is in the capital, Amman, which treats around 50 patients per day.

The Governments represented at today's meeting are members of the IAEA, the Organization of Islamic Cooperation (OIC), and the Islamic Development Bank.

Other institutions present included the African Development Bank, the Arab Bank for Economic Development in Africa and the WHO.

[In Juba, UN peacekeeping chief urges political solution for South Sudanese crisis](#)

21 March 2017 – The security situation in South Sudan is “very worrisome,” the head of United Nations peacekeeping operations today said, warning that the number of people fleeing the country showing no signs of slowing, and calling for a political solution to the hostilities.

“You cannot hope that a solution will come by the use of weapons, the solution has to be political,” said outgoing Under-Secretary-General for Peacekeeping Operations Hervé Ladsous in a press conference in Juba, alongside Jean-Pierre Lacroix, who will take up the position in April.

Mr. Ladsous underscored the importance of the 2015 peace agreement signed by President Salva Kiir and opposition groups, but noted that there are concerns about implementing an agreement which will shortly be two-years old.

Earlier in the day, Mr. Ladsous said he spoke with President Kiir in what he described as a “good” meeting. Among the topics discussed were the challenges to humanitarian action, including impediments to getting clearances, as well as instances of aid workers killed or injured while on the job.

Meanwhile, the needs in the country are greater than ever with two counties in Unity state – Mayendit and Leer – formally declared famines.

Mr. Ladsous warned that the situation is “man-made” after several years of fighting and “is not going to improve” because it is now crop planting season and all farmers are displaced or seeking refuge in neighbouring countries.

Speaking to journalists, Mr. Ladsous also noted that the first vanguard of the UN Security Council-mandated Regional Protection Force should be deployed to Juba “in the next few weeks.” The units will be comprised of Bangladeshi, Nepalese, and Rwandan troops, followed by Ethiopian forces and troops from other countries.

The senior UN official added that he will meet tomorrow in New York with Member States who are contributing troops to discuss the deployments.

Once deployed to Juba, the Force will free a number of UNMISS units to “the countryside to better protect the civilians,” he said.

Mr. Ladsous noted, however, that the main responsibility for protection is with the Government of South Sudan: “We cannot have one blue helmet behind every single South Sudanese citizen. The responsibility to protect its own citizens is that of the Government. And we are here to support, to facilitate, to help the Government of the sovereign country of South Sudan.”

[Greener energy for a third of the world bodes well for all, says UN on International Forest Day](#)

21 March 2017 – Cautioning the impact of human activity such as practices use of woodfuel on world’s forests, the United Nations Department for Economic and Social Affairs and the Food and Agriculture Organization (FAO) today called for better wood-energy conversions technologies and more sustainable management of forests so that everyone benefits.

“This is an area where we can make a real difference,” said Wu Hongbo, UN Under-Secretary-General for Economic and Social Affairs.

“Sustainably managed forests are productive and resilient ecosystems, providing people with livelihoods and renewable energy, along with timber, food, shelter, clean air, water and climate benefits,” he added.

At the same time, fuel wood – the primary source of energy for nearly a third of the world’s population and a product derived from forests – is also an important part of the energy equation.

However, current fuel production practices (such as production of charcoal) are not only contributing to degradation of forests and soils, they are estimated to cause up to seven per cent of global greenhouse gas emissions caused by humans.

Most of the emissions is largely due to unsustainable forest management and inefficient charcoal manufacture and fuelwood combustion, FAO said in the report, The Charcoal Transition, which was launched coinciding with the International Day of Forests .

“This is especially important for poor people in rural areas of developing countries, where wood is often the only energy source available [and its] conversion to charcoal is often done using rudimentary and polluting methods,” noted FAO Director-General José Graziano da Silva announcing the report at a ceremony marking the International Day in Rome.

Forests, energy, climate change and sustainable development

Forests and energy are also linked to sustainable development and can help combatting climate change.

According to estimates, about a third of the world's population (about 2.4 billion people) still rely on the traditional use of woodfuel for cooking, and many small enterprises use fuelwood and charcoal as the main energy carriers for various purposes such as baking, tea processing and brickmaking.

Efficient charcoal manufacture and use can help mitigate climate change. A man arranging bags of charcoal to a temporary holding area in Ntendesi, the Democratic Republic of the Congo. Photo: FAO/Giulio Napolitano

Of all the wood used as fuel worldwide, about 17 per cent is converted to charcoal, however the production often relies on inefficient technologies and unsustainable resources and in some cases the emission of greenhouse gas can be as high as nine kilograms of carbon dioxide-equivalent per kilogram of charcoal produced.

“Ensuring access to affordable, reliable, sustainable and modern energy is one of the 17 Sustainable Development Goals (SDGs) [and it is] fundamental for addressing the impacts of climate change and eliminating extreme poverty and hunger,” explained the head of FAO.

“We need, for instance, to adopt improved technologies for energy conversion,” he noted, referring to the UN agency's programmes to deliver fuel-efficient stoves, especially for poor people in Latin America and Africa.

Greening the charcoal value chain and applying sustainable forest management practices can, therefore, mitigate climate change and further efficiencies can be gained by reducing charcoal waste, for example, by transforming charcoal dust into briquettes, adding a new iteration to the energy cycle.

Economic benefits and environmental improvements

The FAO report also argues that although the transition from unsustainable to sustainable sourcing could impose costs on the charcoal value chain, a greener charcoal sector would have an overall positive economic impact.

For instance, a cost-benefit analysis in Kenya estimated that a transition to efficient charcoal production would require an investment of \$15.6 million per year excluding upfront costs. However, it would generate \$20.7 million in benefits.

At the same time, demand for sustainable charcoal production can provide opportunities for afforestation and reforestation. And providing local people with greater tenure security can increase their willingness and ability to invest in sustainable approaches.

Furthermore, fostering an enabling political environment and an attractive investment climate for transition to a greener charcoal sector can also help increase government revenue collection and investments in sustainable forest management and efficient wood conversion technologies.

A win-win for all concerned, including for the forests.

[Despite progress, world's most marginalized still left behind – UN development report](#)

21 March 2017 – A flagship United Nations report launched today finds that although the average human development improved significantly since 1990, progress is uneven, with systemic discrimination against women, indigenous peoples and ethnic minorities.

The latest Human Development Report, released annually by the UN Development Programme (UNDP), found that while many people have greater access to education, health and sanitation, for example, more focus needs to be paid to who has been excluded and why.

“By eliminating deep, persistent, discriminatory social norms and laws, and addressing the unequal access to political participation, which have hindered progress for so many, poverty can be eradicated and a peaceful, just, and sustainable development can be achieved for all,” said UNDP Administrator Helen Clark, speaking at the report launch in Stockholm, alongside Swedish Prime Minister Stefan Löfven and the report’s lead author and Director of the Human Development Report Office, Selim Jahan.

Entitled *Human Development for Everyone*, the report noted that one in three people worldwide continue to live at a low level of human development, as measured by the Human Development Index – essentially a ranking of countries based on strides made with a peace-centric model of progress.

According to the report, women and girls are systematically excluded by economic, political, social and cultural barriers.

“Women tend to be poorer, earn less, and have fewer opportunities in most aspects of life than men,” according to the report.

Authors found that in 100 countries, women were legally excluded from some jobs because of their gender, and in 18 countries, women needed their husband’s approval to work.

The report also points to “dangerous practices,” such as female genital

mutilation and forced marriage, which continue to hamper the development of women and their inclusion in society.

In addition to women and girls, the report points to “patterns of exclusion and lack of empowerment” of people in rural areas, indigenous peoples, ethnic minorities, people with disabilities, migrants and refugees, and members of the lesbian, gay, bisexual, transgender and intersex community.

The report calls for far greater attention to empowering the most marginalized in society, and recognizes the importance of giving them greater voice in decision-making processes.

The report also warns that key development metrics can overstate progress when they focus on the quantity, rather than the quality, of development. For instance, girls’ enrolment in primary education has increased, but in half of 53 developing countries with data, the majority of adult women who completed four to six years of primary school are illiterate.

Unlike in previous years, this year’s report is also available in an app for iOS and Android.
