

Press release: Oxford flood alleviation scheme uncovers a piece of the city's history

The findings include ancient road surfaces, culverts, pottery, and other objects which have helped date an ancient crossing point of the River Thames and its tributaries, at what is now known as Old Abingdon Road.

The Oxford flood alleviation scheme project team commissioned the archaeological study as part of the detailed design for the scheme. Part of the proposed scheme is to construct new culverts to carry flood water beneath the road. These investigations have enabled the team to carefully plan where the new culverts will go to minimise impact on the ancient structures lying beneath.

The route of the Old Abingdon Road is thought to be part of a stone or earth causeway known as Grandpont, which also includes Folly Bridge, built by Robert d'Oilly who built Oxford Castle in 1071. Grandpont had over 30 different arches or culverts which crossed the rivers, streams and marshes in the area, with over 7 of these thought to be beneath the Old Abingdon Road. The causeway may have dated from the Saxon period as there is evidence of 2 fords in this area from that time (source: [Historic England](#)).

From past investigations in this area it is believed that there were culverts beneath the road dating from Norman (1066 to 1154) and later medieval (12th to late 15th century) times. The culverts were designated 'scheduled monuments' in October 2012. Our findings suggest there are more culverts along this road.

Joanna Larmour, Project Director, said:

Our archaeologists found that as the ground was quite compacted beneath the various road surfaces, they had to use hand digging tools to complete their investigations.

We found some great pieces, including pottery shards from a medieval jug, a horseshoe from the late 17th Century to 18th century and most importantly for us, evidence of ancient culverts. These all help us understand just how long this has been a river crossing and a route into Oxford.

The investigation found a total of 6 pottery shards, 4 pieces of clay tobacco pipe, 2 pieces of ceramic building material, 6 iron finds including nails, a horseshoe, a connecting piece from a harness, 7 pieces of glass from a post-medieval bottle or flask, and a window pane.

These were all hidden amongst a series of medieval and post-medieval road

surfaces which the team had to break through to get to the oldest features underneath.

In addition, the investigations found some structural features including stone kerb, a roadside ditch likely to be from the 12th Century, and a culvert, now demolished, which is likely to be Norman or Medieval similar to the known, scheduled culverts.

From these finds and using existing historical knowledge, we can build up quite a picture of life in this area. The type of soils and gravels in this area suggest that it had firmer soil deposits than the rest of the floodplain, and indicate why it was chosen as a suitable crossing point of the River Thames. The medieval causeway was probably cambered, with drainage ditches either side carrying run off into the streams of the Thames that ran beneath the causeway in a stone culvert. The other culverts in this area have a raised roof, and if this culvert had the same, the causeway would have had a hump-back at this point. From the artefacts found, we know that the route has been used as a crossing from medieval times, up to the present day.

In the late 17th to 18th centuries, the route underwent a major rebuild, which we can tell from the deposits and material that we found. It is possible that this is when our culvert was demolished. The surfaces from this time lie within a series of kerb stones.

The Oxford flood alleviation scheme project team have shared these finds with Oxford City and County Archaeologists as well as Historic England (due to their responsibility for scheduled ancient monuments). They will follow this work up with more archaeological investigations in different locations in the scheme area, which will be completed over the coming months.

Catherine Grinsey, Senior Archaeologist for the Environment Agency, said:

From our perspective, the archaeological evaluation was a great success. We have had many questions answered and have better information on which to base our plans.

This knowledge means that the team can finalise the scheme design in the Old Abingdon Road area, and ensure it has minimal impact on the history beneath the road.

The detailed design of the scheme will be shared at a public consultation from 5 May to 6 June 2017, which will be run both online and at a series of 4 events in the scheme area:

- 2pm to 8pm, Thursday 11 May 2017 at West Oxford Community Centre, OX2 0BT
- 2pm to 8pm, Friday 12 May 2017 at South Oxford Community Centre, OX1 4RP
- 2pm to 8pm, Monday 15 May 2017 at Oxford Deaf and Hard of Hearing Centre, OX1 1RL
- 2pm to 8pm, Thursday 18 May 2017 at St Luke's Church, OX1 4XB

The consultation will also give local communities the opportunity to give feedback about some of the scheme features they have told us they are most interested in, such as the new bridges we will be installing, footpath furniture and signage.

Keep up-to-date with the scheme via the [Oxford flood scheme webpage](#), via our [Facebook page](#), on [Twitter](#) and via our scheme newsletter. If you would like to sign up for our newsletter, please email oxfordscheme@environment-agency.gov.uk.

The Oxford flood alleviation scheme is a partnership project involving the Environment Agency, Oxfordshire County Council, Oxford City Council, Vale of White Horse Council, Oxford Flood Alliance, The Oxfordshire Local Enterprise Partnership, University of Oxford, Thames Water and Thames Regional Flood and Coastal Committee.

The scheme will involve lowering parts of the floodplain and widening some of the rivers and streams that run through it, to create more space for floodwater, and reduce flood risk to the city. It is currently estimated to cost £120 million.

For media enquiries Mon-Friday 9am to 5pm please call 03708 506 506. After this time, please call the Duty Communications Officer on 0800 141 2743.

Press release: Report 05/2017: Near miss between a train and a track worker at Shawford

RAIB has today released its report into a near miss between a train and a track worker at Shawford on 24 June 2016.

Summary

At 12:22 hrs on 24 June 2016, a train travelling at about 85 mph (137 km/h) narrowly missed striking a track worker near Shawford station, Hampshire. The track worker and a controller of site safety (COSS) had gone onto the railway to locate a reported rail defect. The track worker was not injured but was badly shaken by the incident. After making an emergency stop, the train driver reported the incident and was fit to continue his journey.

The immediate cause was that the track worker had become distracted while he was standing on a line on which trains were running. This happened because there was a breakdown in safety discipline and vigilance when the COSS and track worker went onto the railway. Firstly, they did not implement the required safe system of work for going onto the railway at Shawford. Secondly, the track worker crossed the railway without the permission of the COSS. Thirdly, the track worker was distracted and stopped on an open line when crossing back. The RAIB found a similar breakdown in safety discipline and vigilance when it investigated a fatal accident at Newark North Gate (report 01/2015). It is probable that the track worker's alertness and decision making were affected by fatigue, because he had slept in his car all week to avoid making long journeys to and from home each day. A possible underlying factor was that the rail testing and lubrication section within the Network Rail delivery unit involved was not resilient to any loss of resources or sudden increase in workload. Although not causal to the incident, the RAIB also observed that the way in which the section carried out safe system of work planning for its staff was not compliant with Network Rail's processes, and neither the COSS nor the track worker reported their involvement in the incident at the time.

Recommendations

In addition to a previous recommendation and learning point from the Newark North Gate accident, which also address the key issue of the breakdown in safety discipline and vigilance in this incident, the RAIB has made three new

recommendations, addressed to Network Rail. The first relates to the management of fatigue for staff needing to make long journeys before and after a shift. The second relates to making the rail testing and lubrication section of the delivery unit more able to accommodate a short-term loss of resource and peaks in workload. The third recommendation calls for Network Rail to consider the reasons why its management arrangements on Wessex Route did not detect and rectify the non-compliances with the processes for managing the safety of people working on or near the line. The investigation also identified six learning points about: reminding staff of the importance of following existing rules and procedures; how the early use of the train's horn by drivers to give an urgent warning can avert an accident if track workers on their line do not acknowledge the first horn warning; and the timely reporting of operational incidents.

Notes to editors

1. The sole purpose of RAIB investigations is to prevent future accidents and incidents and improve railway safety. RAIB does not establish blame, liability or carry out prosecutions.
2. RAIB operates, as far as possible, in an open and transparent manner. While our investigations are completely independent of the railway industry, we do maintain close liaison with railway companies and if we discover matters that may affect the safety of the railway, we make sure that information about them is circulated to the right people as soon as possible, and certainly long before publication of our final report.
3. For media enquiries, please call 01932 440015.

Welsh team set to compete at Special Olympics, thanks to Welsh Government and Disability Sport Wales funding

The event will take place from 7-12 August and is the country's largest multi-sports event for athletes with intellectual disabilities. The funding will help towards the costs of sending a team from Wales to compete at the

Games.

The Special Olympics National Games are held every four years and enable children and adults to compete at a national level. Around 2,600 athletes will come together from across the country to compete in 19 sports.

Minister for Social Services and Public Health, Rebecca Evans said:

“I am pleased to be able to provide this funding, which will enable around 200 Welsh athletes to compete at the Special Olympics National Games. Training for, and participating in, events such as this one, can offer enormous benefits – not only in terms of improving people’s health and wellbeing, but also in building self-confidence.”

Economy Secretary Ken Skates said:

“It’s vital that Wales is represented at National Games such as these, building on our rich sporting history and recent success stories. I’m delighted that Welsh Government funding has helped ensure a strong Welsh presence and look forward to us playing a big part in a successful Games.”

Pippa Britton, Chair, Disability Sport Wales said:

“I am delighted that Disability Sport Wales is once again able to support Special Olympics Team Wales to attend their National Games. This event is a pinnacle moment for any athlete, providing them with opportunities to compete and engage with competitors from across the UK.

“We are very proud of the efforts of the Team and have no doubt that they will represent Wales with great distinction when they take the stage later this summer.

“We wish them all the very best of luck.”

Jeff Savory Chair & Head of Delegation Special Olympics Wales said:

“We would like to thank Disability Sport Wales and The Welsh Government for their support to the Special Olympics Wales Team. The Special Olympics GB National Summer Games are the flagship event in the 4 year cycle of Special Olympics in GB. This event also is the qualifying event for the 2019 World Games which is to be held in Abu Dhabi. “I know that every athlete will do their best to bring the silverware HOME to Wales.”

Ofcom consultation

I receive a great deal of correspondence from my constituents about poor service from telephone and internet companies. I am aware how much delays in getting repairs done, missed appointments and starting a new service costs in terms of time and money.

I have received the communication below from the Chief Executive of Ofcom. They are consulting on proposals to require phone and broadband to pay automatic compensation in this cases. The consultation ends on 5 June and you can access it at:

<https://www.ofcom.org.uk/consultations-and-statements/category-1/automatic-compensation>

"Ofcom has today set out new proposals to require phone and broadband companies to pay automatic compensation – either a cash payment, or a credit on a bill – to customers who suffer slow repairs, missed appointments or delays to starting new services.

When a customer's landline or broadband goes wrong, that is frustrating enough without having to fight to get fair compensation from the phone company. So we are proposing new rules to force providers to pay money back to customers automatically, whenever repairs or installations don't happen on time, or when people wait in for an engineer who doesn't turn up. This would mean customers are properly compensated, while providers will be incentivised to work harder to improve their service.

Compensation payments would be set by Ofcom, and designed to reflect the degree of harm suffered by consumers. Here is how Ofcom's automatic compensation scheme would work:

Problem	A landline or broadband customer would be entitled to compensation if...	Amount of compensation
Delayed repair following loss of service	Their service has stopped working and it is not fully fixed after two full working days.	 £10 for each calendar day that the service is not repaired
Missed appointments	An engineer does not turn up for a scheduled appointment, or it is cancelled with less than 24 hours' notice.	 £10 per missed appointment £20 per missed appointment
Delays with the start of a new service	Their provider promises to start a new service on a particular date, but fails to do so.	 £5 for each calendar day of delay, including the missed start date £1 for each calendar day of delay, including the missed start date

We estimate that our plans would mean up to 2.6 million additional customers could receive up to £185m in new compensation payments each year. Currently, there are 7.2m instances where landline or broadband customers suffer delayed

repairs, missed appointments or delays to new installations. Financial compensation from companies, totalling around £16.3m, is currently paid out in 1.1m of these cases.

Around one-third of small and medium-sized enterprises choose residential landline and broadband services and would also benefit from our compensation proposals.

We are consulting until 5th June and plan to publish a statement at the end of the year".

With best wishes

Helen
