## Green Party: Climate change risk increasingly severe

25 January 2017

The Green Party has responded to a report published today which reveals Europe is warming at a faster pace than the global average and faces multiple climate hazards [1].

The European Environment Agency report is the most comprehensive study of Europe's vulnerability to climate change available [2]. It predicts Atlantic-facing countries will face heavier rainfalls, increased flood risk and more severe storm damage.

Jonathan Bartley, Green Party co-leader, said:

"Our environment is being destroyed all around us – our oceans and mountains, our wildlife and our homes are all under direct threat from climate extremes. As the planet races towards the 2C warming limit, we have two options as country. We can drag our feet and watch our environment suffer or we can move decisively away from the dirty, dangerous technology of the past by keeping fossil fuels in the ground and investing in renewables.

"Standing up to climate deniers has never been more important – even if they hold some of the most powerful positions in the world. The actions Donald Trump takes in the US will directly impact our lives in Europe.

"The EEA report makes for terrifying reading, but it's also an opportunity for Europe to develop effective strategies for tackling greenhouse gas emissions and for Britain to step up and lead the way on transitioning to a zero carbon economy."

## Press release: Teach children simple hygiene to help curb infections

The [guidance](#) recommends children in nurseries and young people at university be taught when and how to wash and dry their hands, for example after going to the toilet and before preparing food, in order to prevent the spread of infections. Public Health England's (PHE) educational resources, [e-Bug](#) and Germ Defence, are listed as two ways to promote better hygiene.

Young people living away from home for the first time should also be given information about how to care for themselves when they get an infection that will resolve itself over time, for example, a common cold or flu. They should be directed to 111, the NHS Choices website and local pharmacies if they need advice, the guidance says.

The guidance by NICE and PHE, is aimed at NHS organisations, local authorities and health and social care professionals so they can provide information to people in their care.

The guidance covers the correct use of antimicrobial medicines including that patients should not buy prescription-only antimicrobials online, share them with others or dispose of unused medicine down the sink. NICE also says that the public should be made aware about when it is appropriate to take antimicrobial medicines, and the risks associated with their overuse and misuse.

Professor Gillian Leng, deputy chief executive and director of health and social care at NICE, said:

Antimicrobial resistance is a problem that is happening now and will get worse without action at all levels so we must all play our

part.

There are already common infections that are resistant to antimicrobials. Without sustained changes to the way we manage infections and protect these medicines, some routine medical procedures will become fatal.

Education is key to this issue, and that's why we've made recommendations for a whole range of ages; from preschool settings to residential and day care settings for older people.

Paul Cosford, Medical Director Public Health England, said:

We all have a part to play in this battle against antimicrobial resistance to ensure that antimicrobial treatments do not become obsolete in the future. To stop the spread of infections and reduce resistance, good hand, respiratory and food hygiene and appropriate antimicrobial use are vital. As well as providing education and support resources we also encourage the public, healthcare workers and patients to sign up to be Antibiotic Guardians to make their pledge for how they'll make better use of antibiotics.

Global estimates suggest that more than 700,000 people die every year from drug-resistant strains of common bacterial infections, HIV, TB and malaria.

If antimicrobial resistance continues to increase, this number could rise to 10 million a year by 2050, with people dying from ordinary infections, or from routine operations due to the risk of infection.

Professor Mark Baker, director of the centre for guidelines at NICE, said:

If antimicrobial resistance continues to increase, the consequences will be disastrous. It isn't a problem we can tackle in isolation.

This is why our final guideline emphasises the need for a multi-pronged approach to tackling antimicrobial resistance. We must work together to fight this threat.

Professor Dame Sally Davies, Chief Medical Officer said:

We need to address the growing problem of drug-resistant infections as the global medicine cabinet is becoming increasingly bare. Preventing infections in the first place is key, and so is education on how to use antibiotics appropriately.

This guidance provides important information on how we can keep these important medicines working.

1. [Public Health England](#) exists to protect and improve the nation's health and wellbeing, and reduce health inequalities. Twitter: [@PHE\\_uk](#)  
Facebook: [www.facebook.com/PublicHealthEngland](#)
2. Read the review on AMR (2014) [Antimicrobial Resistance: Tackling a crisis for the health and wealth of nations](#).
3. Antimicrobial resistance is when a bacteria, virus or fungi can no longer be successfully treated by an antimicrobial medicine. It develops when we use these medicines inappropriately.
4. Read the guidance [Antimicrobial stewardship: changing risk-related behaviours in the general population](#).
5. This new guidance complements [antimicrobial stewardship](#).

For more information contact the NICE press office on 0300 323 0142 or out of hours on 07500 605 228.

## [Improvements at the Riverside area](#)

I am pleased to report a number of proposed improvements in the Riverside area to the road surface and parking situation as follows :

**+ Parking improvement :** On Monday evening, the council's [City Development Committee](#) agreed to a waiting restrictions at the parking area near the Bridgeview Station Restaurant. This will restrict parking to 2 hours meaning the car park will be used for people using the playing fields and visiting the restaurant and stop all-day parking. I have long campaigned for this at the request of the football pitch users and residents who are patrons of the restaurant.

An additional disabled bay will be provided and the long unmade parking area to the west will remain without parking restriction.

It will not be possible to undertake the change until after the new flooding defence works take place in the summer.

**+ Surface improvement 1 :** A positive by-product of the flooding defence works in the summer is that my request to have the long unmade parking area to the west of the above area will be properly surfaced for the first time, greatly increasing the amount of parking with a quality surface.

**+ Surface improvement 2 :** The surface in front of the nearby Riverside Pavilion on the north side of Riverside Drive has become very uneven again, with numerous potholes, including a large one at the entrance. I raised this with the council's Neighbourhood Services and the Projects and Development Manager has responded positively as follows :

**"I have ... arranged the entrance of the car park to addressed and we will look to fill in more of the larger pot holes. ... We are looking to do more works down at Riverside and are looking to put an item to Committee in the Spring."**

## **Vice President Greets Citizens on Republic Day**

The Vice President of India, Shri M. Hamid Ansari has conveyed his warm greetings and best wishes to the citizens of our country on the occasion of Republic Day Celebrations. In a message, he said that we should reaffirm our commitment towards the Constitution and founding principles of our Republic and revalidate our faith in the cherished ideals of liberty, equality, fraternity and justice for all.
