

[Press release: Parole Board will have new phone numbers and email addresses from 12 March 2018](#)

What is happening?

The Parole Board is moving to a modern IT platform to help support its work going forward.

What does this mean?

This means that is necessary for the Parole Board to change all of its phone numbers and email addresses.

When will this happen?

The new phone numbers and email addresses will be active from 12 March 2018.

How will I contact the Parole Board?

Here are the new general enquiries and press enquiries contact details that you can use to contact the Parole Board from 12 March 2018:

What about writing to the Chair or CEO?

Here are the new email addresses to contact the CEO or Chair of the Parole Board:

Things to remember:

- Monday 12 March 2018 is the first day the new numbers and email addresses will be used.
- All phone numbers are brand new
- All email addresses will end with @paroleboard.gov.uk

[News story: Tax break to help Black](#)

[cabs go green](#)

Britain's black cabs will get a new boost to go green when a tax exemption for electric taxis comes into force this April. The exemption, worth £1,550, will apply to new cabs purchased from April onwards, and follows the [Autumn Budget](#) announcement that zero emission taxis worth over £40,000 will no longer have to pay a Vehicle Excise Duty charge.

Currently, all cars over £40,000 are required to pay this charge. By exempting zero emission taxis, it is hoped that cabbies will be incentivised to replace their old diesel taxi for a cleaner, greener electric version.

If just one switches to a zero emission vehicle, it would rid the country of seven tonnes of carbon dioxide a year. With over 75,000 black cabs operating in England alone, the impact this would have on the environment would be significant.

Chancellor of the Exchequer, Philip Hammond said:

We're backing Britain's black cab drivers to go green.

This is a victory for the environment and new technologies, which I am determined to support as we build an economy fit for the future.

Ensuring the air in our bustling towns and cities is free from pollution is part of our quest to become the first government to leave the environment in a better state than we found it.

CEO of LEVC, Chris Gubbey said:

We are delighted that the Treasury has brought forward previously announced changes to Vehicle Excise Duty for green taxis. These measures will encourage more cabbies to switch to zero emissions transport sooner – meaning improved air quality across the UK.

A small number of drivers who already own the vehicle or are expecting to take delivery in March will still have to pay an additional £310 charge. However, LEVC will compensate these drivers to ensure that they are not penalised for being the first to make the transition to a cleaner vehicle.

Traditionally, black cabbies have had limited choice in what vehicle they can buy. This has meant that until now, cabbies have been forced to pay charges which their competitors – who can choose more affordable vehicles – can avoid.

Not only will today's exemption save drivers from paying the VED charge but

by transferring to a zero emission electric cab they will also benefit from, on average, over £400 a month in fuel savings.

This is part of a wider government plan to transform air quality in our towns and cities. It builds on the £7,500 Plug in Taxi Grant, which helps cab drivers buy a zero emission vehicle.

And, at [Autumn Budget](#), the government announced a £400 million Charging Infrastructure Investment Fund to support the industry to roll out charge points for electric vehicles across the UK.

[Speech: The legislation game](#)

Hayley Rogers, Office of the Parliamentary Counsel

Scratching my head over how to interest civil servants in a training course on the legislative process, I hit on the idea of creating a board game that would lead players through the process, from initial ministerial bright idea to fully implemented Act of Parliament.

For the uninitiated, this journey can often feel rather like an arcane game of snakes and ladders, so a board game seemed like the ideal way of bringing it to life. We were up against a deadline, so I drew the board freehand, and a group of us pooled our collective war stories on bills to come up with some realistic “chance” cards that would send players backwards or forwards through the process.

And so “Legislate?!” was born... that was four years ago, and since then it has been played by hundreds of civil servants at training events, along with students visiting Parliament and members of the public during Parliament Week. It has proved a popular and engaging way of helping people to understand the legislative process, with many comments along the lines of “It’s surprising anything ever makes it into law!”.

For some time now we’ve been asked whether we could make the game more widely available, and one player who came along to last year’s Parliament Week event just happened to work for GDS. Terence Eden offered us his expertise to turn the hand-drawn board into something digital, and the cards instructions for players and background information for facilitators into something printable.

You can access [everything you need to play “Legislate?!”](#). If you have feedback, we’d love to [hear from you](#).

News story: Small cloud tech businesses in line for funding boost

The Minister for Implementation, Oliver Dowden MP, has today (Tuesday 6th March 2018) announced that a new version of the G-Cloud procurement framework will open for bids in April, allowing new companies to join the framework – after delivering £1.4bn of spend to small businesses since its inception.

The decision to release a new version of the framework will support new companies, including small businesses, to supply to government, while also giving current suppliers the opportunity to update their service offer and pricing.

Companies will be able to bid to join the framework from April. G-Cloud 10 could eventually be worth £600 million.

G-Cloud gives central government, local councils, NHS Trusts and other public sector bodies a way to purchase cloud-based services such as web hosting from a single, central website.

Oliver Dowden, Minister for Implementation, said:

I'm pleased to confirm that we will re-let the G-Cloud framework, which provides opportunities to many small businesses in the digital sector. This will provide innovative online solutions to government, supporting the delivery of efficient, effective public services. Small businesses are the backbone of our economy, so it's crucial that we listen to them when shaping policy, as we have done today.

Rob Driver, Head of Public Sector at Tech UK, the industry trade body for technology companies across the UK, said:

For the UK Government to deliver its ambitious vision of being world-leading in the next wave of digital government transformation it must embrace the full diversity and strengths of UK tech suppliers, and innovative procurement vehicles such as G-cloud will be fundamental to achieving this vision. The announcement of the G-Cloud 10 Framework should be welcomed as it allows new innovative providers to work with government, enables new services to be provided and is an opportunity to engage with the wider public sector to make use of the framework.

The current version of the framework has 2,856 suppliers, over 90% of which

are SMEs (small and medium-sized enterprises). The framework is expected to go live in June.

[News story: Defence Secretary reaffirms commitment to Daesh's total defeat in meeting with Iraqi counterpart](#)

Royal Air Force Typhoons flying over the middle East in support of Operation Shader. Crown copyright.

There will be no respite in UK operations against Daesh until we can guarantee their absolute defeat, the Defence Secretary reassured his Iraqi counterpart, Erfan al-Hiyali, in a meeting in London today.

Defence Secretary Gavin Williamson said:

We will not rest until we hammer the final nail in the terrorists' coffin.

While Daesh's territory is diminishing, the threat they pose to our security at home and abroad through their evil and barbaric beliefs remains stark. That is why RAF jets continue to strike them in Iraq and Syria to eliminate the threat they pose to our way of life.

The importance of continued RAF activity was echoed by Chief of the Air Staff, Air Chief Marshal Sir Stephen Hillier, who said:

With Daesh losing control of its last remaining pockets of territory, they are once more looking purely like the terrorist organisation they are. Yet the threat they pose within the region and more widely across the world remains.

As we have discovered in previous conflicts, if we let up, then we run the risk that Daesh will return. It is vital that we stay the course, alongside our allies, until the job is done.

In the past three weeks, RAF Typhoons, Tornados and Reapers have destroyed

armoured vehicles, terrorist bases, weapon stores and disrupted supply routes.

On Wednesday 14 February Typhoons destroyed a mechanical excavator, used by the terrorists to construct fortified positions near the Euphrates river in eastern Syria. Operations continued in eastern Syria on Friday 16 February, Typhoons and Tornado's provided close air support to Syrian Democratic Forces engaged in ground close combat with Daesh fighters, destroying five terrorist positions.

An RAF Reaper patrolled over the Euphrates on Tuesday 20 February, striking armed terrorists, including a pair on a motorcycle moving at high speed. On Wednesday 28 February, Typhoons attacked two Daesh armoured vehicles north-east of Abu Kamal. A second Typhoon flight destroyed a key road in the area, which will prevent the terrorists from moving heavy truck-bombs and equipment along it.

On Saturday 3 March, Typhoons demolished four Daesh buildings close to the border with Iraq. On Sunday 4 March, a Typhoon destroyed a tunnel used by the terrorists as a weapons cache, located in a remote area in northern Iraq.

RAF aircraft have carried out nearly 1,700 strikes against Daesh in Iraq and Syria since 2014. The UK have deployed Reaper UAVs, Typhoon jets and Tornados, have conducted significant ISR (Intelligence, Surveillance and Reconnaissance) missions and have provided additional air support such as inflight refuelling and transporting.

The UK is working to secure Daesh's lasting defeat by cooperating with legitimate local authorities towards a stable, prosperous and united future for affected communities in both Iraq and Syria and ensuring that Daesh must not be allowed to re-emerge.
