

News story: Avian flu found in wild birds in Dorset

Bird flu has been detected in 17 wild birds in Dorset, the Department of Environment, Food and Rural Affairs has confirmed today, with more expected over the coming days.

This is the first confirmed finding of the virus in the UK this winter and tests have shown it is closely related to the H5N6 strain that has been circulating in wild birds across Europe in recent months. This is different to the strains which affected people in China last year and Public Health England have advised the risk to public health is very low. The Food Standards Agency have said that bird flu does not pose a food safety risk for UK consumers.

UK Chief Veterinary Officer, Nigel Gibbens, said:

This is the first time avian flu has been identified in the UK this winter and while the disease does not represent a threat to the public, it is highly infectious and deadly to birds.

As the virus has been circulating across Europe, this finding has not come as a surprise. But it is vital that anyone who keeps birds – whether a few in a back garden or thousands on a farm – is vigilant for any signs of disease, reports suspect disease to APHA and maintains good biosecurity to reduce the risk of their birds becoming infected.

While there is no legislative requirement to put restrictions in place when this strain of virus is found in wild birds, the Chief Veterinary Officer has confirmed local measures will be introduced to help manage the potential threat.

A local [‘avian influenza prevention zone’](#) will be introduced in the area of Dorset where the diseased birds were found. This means it will be mandatory for all captive bird keepers to put enhanced biosecurity measures in place such as feeding and watering birds indoors to minimise mixing with wild birds, minimising movement in and out of bird enclosures, cleaning and disinfecting footwear and keeping areas where birds live clean and tidy. This will be in place until further notice and will be kept under regular review as part of our work to monitor the threat of bird flu.

There are no plans to carry out any culls or put movement restrictions in place.

The risk to domestic poultry nationally remains low, however good biosecurity is essential and bird keepers across the country are reminded to follow our [biosecurity advice](#) which includes specific advice for keepers of backyard

flocks.

Poultry keepers and members of the public should report dead wild birds to the Defra helpline on 03459 33 55 77 and keepers should report suspicion of disease to APHA on 03000 200 301.

Trade should not be affected following the findings in wild birds, according to the rules of the World Animal Health Organisation (OIE).

1. The risk to poultry and other captive birds depends, amongst other things, on the level of biosecurity on the premises and the likely contact between kept birds and wild birds, which is why it is essential that all keepers remain vigilant and ensure they practice the highest standards of biosecurity.
2. [Find out if you are in the local 'avian influenza prevention zone' by typing in your postcode](#)
3. [Keep up to date with the latest Avian Influenza situation](#)
4. For media queries contact Defra press office on 020 8225 7618 or out of hours on 0345 051 8486.

Speech: Dr Liam Fox addresses the UK-India JETCO

Thank you Richard [Richard Heald],

Honourable Minister Prabhu, distinguished speakers, ladies and gentlemen.

I am delighted to welcome you all here today, at the 12th meeting of the India-UK Joint Economic and Trade Committee (JETCO).

I look forward to what promises to be an insightful discussion with business leaders of both countries.

I would also like to welcome Minister Prabhu to London, for his first visit as Minister of Commerce and Industry – and thank him for the fascinating and productive conversation that we have held.

I would also like to thank the chairs of the joint working groups on smart cities and advanced manufacturing and engineering. I look forward to hearing the outcomes from the business-led joint working groups shortly.

And I would particularly like to welcome the visiting delegation from Pune led by Municipal Commissioner Mr Kunal Kumar. I very much enjoyed my own visit to the city last year.

The United Kingdom is a champion of free trade – and it is the task of my department to work with our most important partners to remove barriers and

promote commercial freedoms across the world.

Today is an opportunity for India and the UK to work together, not only to strengthen our own partnership, but to rise to meet the challenges of the future.

UK-India trade and investment

India and the UK are, in PM Modi's own words, an "unbeatable combination".

Both countries have a shared interest in each other's prosperity, generating jobs, developing skills, and enhancing the competitiveness of the two economies.

Our vibrant business communities are instrumental in maintaining and strengthening the partnership between our two countries, building upon strong ties encompassing trade and culture.

Bilateral trade between the 2 countries has grown over the last 10 years and was £15.4 billion in 2016.

And trade grew by a remarkable 15% in the first 3 quarters of 2017, compared to the same period in 2016.

Our commercial links span a wide variety of sectors, from life sciences and medical technology, to food and drink, energy, defence and culture.

Our trade in services includes not only IT and professional services – but significant trade in financial services, with the City of London playing a key role in raising capital to support India's infrastructure growth.

I was delighted to open the London Stock Exchange last year with Finance Minister Jaitley. Over 80% of masala bond issuances to date have taken place in London, to a value of more than \$3.9 billion.

We also have exceptionally strong investment links. The UK has been the largest G20 investor in India over the last 10 years, more than any other EU country. There are over 270 British companies operating there, employing nearly 800,000 people.

The CBI estimates that UK companies are creating one in every 20 jobs in India's organised private sector. This includes well known investors such as Vodafone, BP, HSBC, Standard Chartered, G4S and Unilever – but also new investors such as Dyson, who plan to launch their products in India in 2018.

I welcome yesterday's announcement by Prime Minister Modi to further liberalise FDI policy, especially for single brand retailers.

And I welcome the reforms that Minister Prabhu and his team are taking to improve the ease of doing business in India – leading to a 30 point jump in the World Bank's Index this year. The UK is proud of its partnership with India on the ease of doing business, including co-hosting a national conference in 2016.

With a vote of confidence in the unshakeable strength of the UK economy, India is also the source of significant investment and jobs in the UK.

In 2016, approximately 800 Indian companies were operating in the UK, accounting for around 110,000 jobs and recording combined revenues of £47.5 billion.

In the same year, India established 127 new investment projects in the UK, adding 4,000 new jobs and safeguarding more jobs than any other country.

What is particularly pleasing is the size and range of Indian investors who already consider the UK their home.

This includes well-known companies such as Tata Sons, owners of TCS and Jaguar Land Rover, Wipro, Infosys and Genpact alongside many others.

This government is putting its money where its mouth is in response to India's technology investment demands. In 2016, I was delighted to attend the UK-India Tech Summit in Delhi, along with the Prime Minister.

The UK boasts some 58,000 technology firms. In the last year, more venture capital was invested in London than in Germany, France, Spain and Ireland combined.

And last November, with the support of the Indian High Commission and UKIBC, DIT ran the India-UK 'Future Tech month' where more than 60 of India's most innovative tech companies and buyers criss-crossed the UK's regional tech and manufacturing centres of excellence set out in the Industrial Strategy.

This will be followed by the [UK-India Createch Summit](#) in Mumbai.

People to people links

Our business links are strengthened by the people to people links between our countries – what Prime Minister Modi has described as a 'Living Bridge'.

I noted with pride that 33 people of Indian origin were recognised in the UK's New Year's Honours list, including Professor Pratibha Laxman GAI who grew up in India and studied in the UK and went on to pioneer electron microscopy applications in chemistry.

Our 2 governments want to do more to encourage these innovative links between people and industry in both countries.

Ambitions for UK-India trade

All of this shows that we already have a strong base to build on.

However, Minister Prabhu and I both believe that there is scope for us to go further.

We share a vision for a deep and dynamic partnership in which the 2

governments and business work hand-in-hand to achieve shared prosperity for India and the UK.

In particular, as we leave the European Union, there is the opportunity for both countries to enhance this partnership – opening up new sectors for business and minimising barriers to trade.

The UK will deepen its support to India, helping the country continue its positive trajectory on ease of doing business. In particular, we aim to strengthen our relationships in the areas of energy, smart cities and financial services, whilst at the same time addressing the critical issue of skills.

And it is to help achieve this joint prosperity, that – at the 11th meeting of the UK-India JETCO in Delhi at the end of 2016 – we agreed to set up a new Joint Working Group on Trade.

We tasked this working group with identifying practical ways to broaden and deepen the trade relationship between both countries, both now and as we leave the EU.

The joint working group is therefore undertaking a joint trade review, an evidence-based assessment of the trading relationship, and the first report came back to Minister Prabhu and myself today.

The review, and its next phase, will provide an important platform, identifying those key sectors where more progress can most readily be made.

We also welcomed the news that [UK Export Finance](#) will increase its support for trade with India. This will provide an additional £2.75 billion in support for UK companies exporting to India and for Indian buyers of UK goods and services, and be available in Indian Rupees.

Visas

Minister Prabhu raised Indian concerns about last year's changes to the UK's [Tier 2 visa](#) route and I have heard feedback that business stakeholders have shared on this issue.

The UK issues more work visas to India than to all of the other countries in the world combined, and we will continue to welcome skilled workers to the UK.

We have to get the balance right and ensure the process is as transparent and smooth as possible.

Our Immigration Minister visited India in November to open a new visa application centre in Bangalore and today I am pleased that the UK government also welcomes India's Minister of State for Home Affairs, Shri Kiran Rijiju to the UK where he will meet FCO Minister Mark Field.

CHOGM

The kind of dialogue harnessed by these JETCOs provides an ideal opportunity for us to identify where UK-India collaboration can help continue this trend.

I look forward to the [Commonwealth Heads of Government Summit](#) in April as a key opportunity to progress the UK-India trade relationship and boost intra-commonwealth trade.

With intra-Commonwealth trade in goods and services estimated at \$687 billion and projected to surpass \$1 trillion by 2020, we are committed to working with our friends and allies in the Commonwealth to remove barriers and liberalise the global trading environment.

India is home to more than half the population of the Commonwealth and we recognise the nation's central role in reenergising the organisation. Now more than ever, it's time for us to build on our links, to reject protectionism and insularity to embrace an interconnected world.

Final call to businesses

But to achieve a step-change in our trading relationship, your role – the role of business – will continue to be crucial.

My officials will be in touch over the coming months – however, in the meantime, I would like to issue a call to you, as those businesses who already have a lot invested in the UK-India relationship, to get in touch with the Department for International Trade.

We want to understand not only the challenges that you face in increasing trade and investment – but also to work with you to overcome them.

Your ideas today can become our policy tomorrow so, please, let us know what you believe the challenges and opportunities to be.

And by working together to meet these challenges, as governments, as business communities, and as people, we can build a brighter, more prosperous future for India, the UK and the world.

Thank you.

[News story: Webinar – 27 Feb – Avoiding late payment issues](#)

Paul Uppal, a former MP, was appointed as the government's small business commissioner in October 2017 with a brief to help small companies deal with

late paid invoices by larger businesses. The role is aimed at preventing disputes occurring in the first place and building the confidence and capabilities of small businesses to assert themselves in contractual disputes and negotiate more effectively. Small business owners will be able to complain to the commissioner about a late payment issue and he will be able to publicly publish reports sharing his findings and response.

In this webinar, Paul will outline the role and take your questions. Tune in to understand how you can avoid late payment causing cashflow issues in your business.

[Press release: Communities urged to log on for new flood films](#)

From February, the 'Flood Friday' films will be released on the first Friday of every month throughout the year and will focus on what residents and businesses can do to 'Prepare, Act, Survive' in the event of flooding.

Created by the Environment Agency's Flood Resilience Team community engagement officers, the campaign is aimed at helping those who live, work and study in the region be more flood resilient.

The short films will focus on different aspects of flooding including:

- how to stay safe in a flood
- how to check if you are at risk of flooding
- what is surface water flooding?
- who to report flooding issues to

The first film focuses on how to check your flood risk and is already available on the Environment Agency's Youtube channel and will be shared through social media.

Community engagement officers Taryn Al-Mashgari (Tyne and Wear), Sarah Pearce (Cleveland) and Anna Caygill (Durham and Darlington) worked together on the project. Taryn said:

These videos will be short and informative and include links to websites and organisations we work closely with to ensure communities have reliable information to help them understand, prepare for and recover from flooding.

From our work with communities, we know how devastating it is to be flooded and the impact it has on lives and livelihoods, so we're

working hard to raise awareness of how to plan for such events.

As well as being shared on the Environment Agency's Twitter and Youtube channels, they will be available on local authority websites and social media and shared with other partners including the social housing, community and voluntary sector.

To see the video visit [Youtube](#)

Communities can take three simple steps to help protect them, their homes and property from the devastating effects of flooding. [Visit the gov.uk web pages](#) to:

- check your postcode and find out if you are at risk of flooding
- sign-up for free flood warnings
- view and save the three point flood plan so you know how to Prepare. Act. Survive in a flood

[News story: UK technology at the heart of successful launch](#)

Credit: Earth-i.

The Hook and Loop Hold Down and Release Mechanism was used during the launch of CBNT-2, Earth-i's pre-production prototype satellite of its upcoming satellite constellation.

The new commercial constellation – called Vivid-i – will be the first of its kind to provide full-colour video; and the first European-owned constellation able to provide both video and still images.

The multiple satellites within the Vivid-i Constellation will significantly increase the ability of companies and institutions to monitor, track and analyse activities, patterns of life and changes at any location on earth.

The Hook and Loop Hold Down and Release Mechanism was funded by the UK Space Agency's National Space Technology Programme with a £35,000 grant and developed by Surrey Satellite Technology Ltd. It is a new type of release mechanism which uses the dual lock type of Velcro to hold down and release the solar panels of the satellite.

Dr Graham Turnock, Chief Executive of the UK Space Agency, said:

"Today's launch is a significant moment for the UK and global space industries with Earth-i's progress being tracked across the world. Earth-i is

an exciting and innovative British company and is a fine example of our thriving space sector.

“The Government’s recently published Industrial Strategy set out a clear vision for the UK to become the world’s most innovative nation and we are working with industry to capture 10% of the global space market by 2030.”

The prototype satellite, designated CBNT-2 by manufacturer Surrey Satellite Technology Limited (SSTL), was launched on the Polar Satellite Launch Vehicle from the Sriharikota rocket launch centre operated by the Indian Space Research Organisation, located in South East India, at 3.58am GMT.

CBNT-2 is a technology demonstration mission, operated by SSTL, and will be referred to as VividX2 by the Earth-i team.

It will demonstrate and prove technology and processes for Earth-i’s forthcoming constellation including tasking, data downlinks to ground stations, image quality and the complex motion control systems that enable the spacecraft to capture video from space.

At the heart of the new satellite is an Ultra High Definition (UHD) camera which will capture high-resolution images for any location on Earth – and film up to two minutes at a time of video which can show moving objects such as vehicles, vessels and aircraft.

Find out more about the UK Space Agency’s [National Space Technology Programme](#).
