

Speech: John Glen's speech on the launch of the Society of Chief Librarian's Culture Offer

I'm sorry I can't join you in person for the launch of the SCL's Culture Offer today in Hull, the UK's City of Culture 2017.

At the end of September I marked 100 days in this post as Libraries Minister – and in this time I have visited a number of libraries across England, including Manchester and Salisbury, to find out about the challenges, successes and possibilities that exist in the sector.

The range of services delivered by public libraries is impressive, as is the contribution the sector makes to local communities and the positive impact it has on so many people's lives.

Libraries bring people together. They provide practical support and guidance. This includes health and social care, digital literacy, jobs and business support, or the enjoyment and wellbeing that literature and cultural activities bring. Libraries offer support at every stage of a person's life.

They are places of aspiration and inspiration as people come to learn, study, write, and research. And many are destinations in their own right, like the amazing library you are in today.

But what role do libraries play in culture? Well, I believe they are uniquely placed to act as hubs of exploration and inspiration. They are able to reach people in rural communities and areas of deprivation where there are few other easily accessible cultural opportunities.

I'll just mention two out of the many brilliant cultural partnerships libraries are forming across England.

The first is the Cultural Hubs project delivered by St. Helens library service. This project is engaging local young people, supporting neighbourhood development and community cohesion, investing in skills and learning opportunities and promoting an environment that supports health and wellbeing. It did this by being creative with its resources and challenging the boundaries of how library spaces can be used.

Then there's Create Gloucestershire's Art of Libraries programme run in partnership with Gloucestershire Libraries, introducing arts and culture to children and young people – particularly those who currently don't take part in this sort of activity. Artists, cultural organisations, library staff, schools and communities are working together in new ways to achieve this. Events so far include a new lego club, illustration and graffiti workshops and a skate film competition.

So these examples show how libraries are using arts and culture to introduce

people to new ideas and offer enriching experiences because, as we know, culture takes many diverse forms.

And as well as traditional events held in libraries, such as book talks and reading groups, there is also a rapidly expanding range of digital activities that provide a great option for libraries to engage with new and existing users. This builds on the rich history of libraries championing important programmes and events including World Book Day and the Summer Reading Challenge.

So what's the role of the Cultural Offer?

It complements and builds on the positive work already taking place in libraries. It underlines the importance of libraries as cultural hubs and gateways to wider cultural activities.

And it should help people to develop and express their creativity through cultural experiences and events.

So I look forward to seeing and hearing more about how the Culture Offer will boost all this positive activity through libraries and to seeing the offer being put into practice. Thank you.

Note: John Glen was unable to attend the launch in person, so a video of him giving this speech was shown at the event.

Press release: Stoneferry students face the facts of flooding

Pupils at a primary school in Hull are a step closer to understanding what to do in a flood following a visit from the Environment Agency.

Year five students at Stoneferry Primary School took part in an interactive workshop where they engaged in a range of flood-related activities where they were taught which household objects can be the most useful in a flood and saw them using a geographic model to better understand how rivers flow.

The sessions were led by staff from the Environment Agency, which provides Hull with flood warnings and alerts when the risk of flooding from rivers and the Humber Estuary is high.

Ninety-five per cent of Hull stands on a flood plain and it has the highest number of properties at risk of flooding in a single urban area outside London.

Over the years the city has been affected by numerous significant river and coastal flood events and on 25 June, 2007, Hull City Council reported more than 9,000 homes and businesses were flooded when heavy rains covered the city. The floods resulting from this caused many millions of pounds of damage and 95 of the city's 98 schools were closed.

Jo Harrison, head teacher at Stoneferry Primary School said:

We're very grateful to the Environment Agency for coming to see us. The children thought it was great fun and it taught them valuable lessons that they'll hopefully pass onto their parents.

Thankfully ours was one of the luckier schools to have escaped the floods of 2007, however, we couldn't overlook the damage it caused.

We believe it is important for our students to fully appreciate their environment and understand that nature has the potential to be both beautiful and dangerous.

Through government funding and partnership contributions, the Environment Agency is investing more than £200million in Hull and the East Riding of Yorkshire to help reduce the likelihood of flooding for thousands of properties by 2021. Part of this investment includes £35.5million of remedial works on the River Hull's flood defences, which will see the repair and replacement of 39 sections of river defence identified as being at the greatest risk of failure.

Brendan Sharkey, Environment Agency project manager on the River Hull Defences Scheme said:

Over the years we have seen how destructive flooding in Hull can be. While we are investing a lot into the city, much of the devastation caused by flooding can be prevented by making sure people are prepared.

We're working closely with schools in the area as we believe the next generation will be key to making Hull one of the world's most flood resilient cities and we have loved the enthusiasm shown by the students of Stoneferry Primary School.

Work on the River Hull Defences Scheme started in April this year and is being delivered by contractor BMM JV – a joint venture between BAM Nuttall and Mott MacDonald.

Varying levels of improvements to the River Hull defences are needed across the sites and work at different locations across the city is likely to progress at the same time.

Brendan continued:

While we are progressing the work along the river as smoothly and efficiently as we can, due to limited access at some of the sites, traffic from some roads and public pathways may need to be re-directed for short periods of time.

Any road closures will not happen until the New Year and we are doing our utmost to reduce the level of inconvenience caused to the public.

A quarter of the total length of works is now complete, and the Environment Agency expects a substantial amount of the work to be underway by the end of the year.

[News story: UK leads the way on crackdown of illicit financing](#)

The UK is making it harder for terrorists and criminals to move money through its banks and businesses by today (26 October 2017) [publishing new information](#) on the best way for organisations to protect themselves against illicit financing.

The [second 'National risk assessment'](#) into money laundering and terrorist financing builds on successful government action in this area over recent years. It uses the lessons learnt from these actions to create a comprehensive risk assessment, which can be used by government, law enforcement and the private sector, to bolster their protections.

Key findings identified by [the report include](#):

- the criminal exploitation of banks, professional and financial services and cash remain the greatest areas of money laundering risk to the UK
- cash remains the favoured method for terrorists to move funds through and out of the country
- a wide-ranging set of reforms by government, like introducing the ability to investigate suspicious asset trails, to crack down on illicit finance over recent years are starting to take effect

By examining how criminals attempt to move illicit funds through the UK, this report underlines the risks and pinpoints areas where businesses may be currently vulnerable. It informs the government, businesses and law enforcement agencies on how best to plug these gaps.

It advises on which services or products criminal groups are currently exploiting, enabling organisations to strengthen their efforts to shut this activity down. It will also help law enforcement allocate resources to the most significant threats.

The vast majority of firms are already vigilant but this information will shape future risk assessments so they can continue to better protect themselves against threats.

The Economic Secretary to the Treasury, Stephen Barclay, said:

This country has done more to put a stop to money laundering and terrorist financing than any other in the world, but we are not complacent as there is always more we can do.

Our record is strong and we are already seeing threats foiled due to the action we've taken.

Today's report makes it clear to criminal groups that the UK will never be an easy target and won't tolerate this activity.

Security Minister, Ben Wallace MP said:

We will not stand by and allow criminals and the corrupt to use the UK to launder and hide their dirty money.

It is essential that we know what the risks to the UK are, which is why we are publishing the second national risk assessment of money laundering and terrorist financing which names a number of jurisdictions whose financial systems are linked to the UK and are at risk of abuse by criminals.

This assessment will help law enforcement agencies and industry take the necessary action against those threats.

Serious and organised crime costs Britain tens of billions of pounds every year and working with the private sector by sharing information and best practice remains vital to addressing this abuse, making it harder for criminals to operate in the UK.

Press release: Alun Cairns: “Welsh manufacturing firms should be at the forefront of innovation as we leave the EU”

Secretary of State for Wales Alun Cairns is to call on Welsh manufacturing businesses to maintain their competitive edge and keep firing on all cylinders, as Britain prepares to leave the European Union.

Mr Cairns will deliver a keynote speech to firms at this evening’s annual EEF dinner (26 October), where he is expected to outline plans to address Wales’ low productivity rate, through the UK-wide Industrial Strategy, which calls on Welsh firms to be at the forefront of innovation and export trade, so that prosperity is shared across the country.

Wales currently benefits from its economy’s manufacturing base, which employs around 150,000 people and is made up of over 5,000 companies, 97% of which are SMEs. But Wales is the least productive region in the UK, with productivity only 80.5% of the UK average.

The Secretary of State for Wales is expected to say:

If we want to stimulate every part of our economy, then we need to create the right conditions for generating ideas and innovation – we need to foster entrepreneurship.

Wales has the advantage of a strong innovation base – be that compound semi-conductors in Cardiff, agri-tech in Aberystwyth, or advanced manufacturing in Deeside.

The UK Government will invest an additional £4.7 billion by 2020-21 in research and development funding and create a new Industrial Strategy Challenge Fund to help the UK capitalise on its strengths in science and innovation in manufacturing.

Mr Cairns will also say:

We know Wales has huge potential when it comes to trade and investment, as there are currently more than 3,800 businesses in Wales that export.

I’d like to see businesses in Wales taking advantage of the world-class support on offer from the UK Government and Welsh Government so that Wales and the wider UK is the best place in the world to do business.

Additional information:

- The UK Government has announced an additional £4.7 billion by 2020-21 in research and development funding and created a new Industrial Strategy Challenge Fund to help the UK capitalise on its strengths in science and innovation in manufacturing.
- There are currently more than 3,800 businesses in Wales that export, with a combined value of £13 billion in the first quarter of 2017. Wales is also an attractive place for inward investment, with latest figures showing that 85 foreign direct investment projects were secured in Wales, creating 2,581 new jobs and safeguarding almost 9,000 more.
- The Secretary of State for Wales has recently written to over 26,000 Welsh businesses identified as potential exporters including a copy to the Wales Export Guide. The Wales specific guide sets out the full range of support available to Welsh businesses from the UK Government and contains inspiring stories of companies based in Wales that are successfully exporting. You can read the guide online here.

[News story: Multi-million pound funding for new Higher Education provider](#)

- Up to £15m funding over three years for New Model in Technology & Engineering (NMiTE)
- NMiTE will train up the next generation of engineers, providing the skills that employers need
- All courses co-created with employers, with 6-12 month integrated work placements

Universities Minister Jo Johnson today announced funding of up to £15 million to support the establishment of a new higher education provider specialising in high-quality engineering courses.

The New Model in Technology & Engineering (NMiTE) aims to become the first new 'greenfield' university in the UK for 30 years, addressing the growing need for engineering talent in sectors such as advanced manufacturing, artificial intelligence and cyber-security.

NMiTE is taking a radical approach to training the next generation of engineers, including having a 50:50 gender balance target, 6 – 12 month

integrated work placements, and recruiting graduates from non-traditional backgrounds. It will also offer accelerated degrees, meaning students can complete their degrees in two years.

The funding, which relies on the project meeting a set of milestones and criteria, will be used to develop the faculty, campus and curriculum, creating a new institution to draw talent to Hereford from the UK and beyond. NMiTE will increase the number of engineering graduates and professionals, addressing a vital skills gap in the economy.

It will work closely with University of Warwick and employers including QinetiQ and Heineken on the design of the curriculum, producing graduates who are ready for the demands of the job market.

Universities Minister Jo Johnson said:

New innovative higher education providers such as NMiTE will play an important part in educating the next generation of much-needed engineers, providing the skills and talent that employers need.

Our reforms are about giving all young people access to university and an increasingly diverse market to choose from. This will ensure a steady stream of highly-skilled graduates into the workplace, meeting the needs of business and boosting the British economy.

Today's announcement builds on plans set out in the government's modern [Industrial Strategy](#) which aims to improve living standards and economic growth by increasing productivity and driving growth across the whole country.

Engineering graduate supply currently falls significantly short of demand. Engineering UK estimates a shortfall of at least 20,000 annually.

NMiTE will take its first cohort of students in September 2020, with development cohorts in 2018 and 2019. Some features include:

- Hands-on project based learning with no lectures – classes will be delivered by teaching professors and practitioners;
- Courses co-created with employers, with mandatory work placements of 6-12 months before graduation;
- Emphasis on enhancing pathways for women with a 50:50 gender balance target, boosting the number of female engineering graduates;
- An aim to support 25% of its student intake with bursaries and scholarships to support diversity and social mobility; and
- A commitment to recruiting from non-traditional backgrounds – e.g. higher level apprentices, armed service leavers.

This follows the introduction of the Higher Education and Research Act 2017, which aims to drive up quality and competition in higher education by making it easier for high-quality institutions to enter the market.

The government has also already set out a series of reforms to technical education, backed by an investment of more than £500 million, to ensure young people receive the training they need to take on the high-paid, high-skilled jobs of the future.

Jesse Norman, MP for Hereford and South Herefordshire, first called for a university there in 2009. He said:

This may well be the most significant development for Herefordshire since they built Hereford Cathedral. Economically, socially, demographically, I believe it will be transformative for the county. But in its vision, innovation and energy, it will also be transformative for tech and engineering education in the UK.

Founding President and Chief Executive Professor Janusz Kozinski said:

With this terrific investment from the Government we are now ready for lift-off. We will be totally reimagining and redesigning the higher education experience for the young people who will create Britain's future.

If Britain is to lead the next industrial revolution, driven by artificial intelligence, driverless cars and 4D printing, we need to educate young people to be pioneers and creators. We need to give them the confidence to think beyond their textbooks, the freedom to be daring, and the tenacity to turn ideas into new products, new companies and even entirely new industries.

The future of higher education for engineers is arriving very soon, in Hereford.

Toby Kinnaird, MD of Barrs Court Engineering in Hereford, said:

The area is dominated by larger SMEs, many of which are key links in national and international supply chains. The university will be key to upskilling the local and regional workforce, boosting productivity and enabling many companies to innovate faster and compete globally.
