

# News story: Aerospace Wales Forum hosted by DECA

The Forum is the trade association for companies operating in the aerospace and defence sectors in Wales and exists to provide the best service it can in promoting its members' companies and capabilities, providing access to events, networking opportunities and industry expertise. DECA is a full member of this Forum.

Rachael Blackburn, the newly appointed Operations Director for the Aerospace Wales Forum, opened the meeting agenda that included a question and answer session from the Welsh Government Cabinet Secretary for Economy and Infrastructure, Ken Skates AM as well as presentations from Dickie Davies, Deputy Director Welsh Government, Rhodri Evans, Price Waterhouse Cooper and Colin Sirett, CEO Advanced Manufacturing and Research Centre

Geraint Spearing, DECA's Chief Executive also gave a presentation and capability overview to the Forum saying,

It gives me great pleasure to welcome you to DECA. Through events like this we are committed to developing partnerships and engagement with as many companies as possible. This also allows us to increase DECA involvement within the wider community and welcoming you all here today is a great step towards these goals.

Winning the F-35 assignment is tremendous news and has provided a new lease of life for DECA; a lot of our work involves the repair, maintenance, overhaul and upgrade of legacy equipment and F-35 provides us with an exciting next chapter to continue our long history.

Dickie Davies presented details of the current opportunities for Welsh Government funding saying,

We are here for you and to support and sustain business in Wales and the UK going forward and we are working to deliver an outstanding package of support. Three years ago, if I had said that we would have Aston Martin at St Athan employing 700 people you would have laughed and so would I, but we are actually there and we are growing.

Rhodri Evan, Cyber Security Lead at Price Waterhouse Cooper gave an interesting presentation on the importance of cyber security within industry. He detailed the impact of attacks and their effect, to not only business operations, but also how an attack can seriously affect the supply chain. Rhodri also detailed the new levels of cyber security protection that

businesses will have to comply with.

Following on from the speakers, Ken Skates, Assembly Member, Cabinet Secretary for Economy and Infrastructure, National Assembly for Wales held a Q&A session taking questions about rail and road infrastructure, apprentice schemes, trade tariffs, the devaluation of the pound, research and development investment and the implications of Brexit. He spoke to the forum saying,

I am pleased to be with you all here today. We are inevitably proud of our aerospace industry and the announcements of job creation in Wales. Wales as a whole is building on a very strong foundation and we are keen to make sure we find common ground to take advantage of and ensure that Welsh strategy dovetails with the UK's industrial strategy and the great news of F-35 assignment for DECA. It gives me great pleasure to work with you and I am looking forward to the future.

---

## [News story: Cleantech startups set sights on US market](#)

The businesses, which all have an innovation that can benefit the environment, went on an [Clean + Cool Mission](#) this week (10 to 17 June 2017).

The mission is backed by Innovate UK and [Long Run Works](#). It supports early-stage, high-potential companies to connect with opportunities through being part of an organised programme. This means they are able to explore cross-border opportunities and find faster routes to their target market.

### **Innovative UK SMEs**

All of the businesses were selected to take part by a panel of judges. The panel was made up of representatives from Clean + Cool, Innovate UK, Department for International Trade, Knowledge Transfer Network, Greenhouse PR, PwC, Silicon Valley Bank, Volans, Whitefox Technologies and Women in Cleantech & Sustainability.

Businesses on the mission include:

- [Aceleron](#), which produces low-cost remanufactured battery packs from used lithium ion batteries
- [Arborea](#), whose carbon bio-converter 'bionic leaf' tiles enable photosynthesis to happen in the built environment
- [Bowman Power Group](#), a provider of electric turbo compounding technology,

that improves the efficiency of gas and diesel-fueled engines in industrial stationary power generation

- [BuffaloGrid](#), which gives people in off-grid locations the ability to charge their phones and access internet services through remote solar-powered hubs
- Cellular Agriculture, a company looking to change how protein is produced for food consumption through tissue engineering technology
- [CCell](#), which has pioneered a wave energy, delivering more power while weighing less. Potential users include sea-water desalination plants and remote inhabited islands dependent on diesel generated electricity.
- [Gravitricity](#), which is developing grid-scale energy storage system that uses gravitational potential to store electricity
- [Green Fuels](#), the biodiesel equipment manufacturer that converts waste oils and fats into biofuels, such as jet fuel
- [H2GO Power](#), a University of Cambridge spin-out that uses solid-state, controllable hydrogen storage and generation for fuel cells
- Hexigone Inhibitors, which is developing environmentally-responsive organic and metallic coatings that are protected from degradation
- [Kelda Technology](#), whose digital shower system improves water efficiency to use 50% less water
- [Meteor Power](#), which is developing a new electric, high-performance motorcycle
- [Perpetual V2G Systems](#), producing power systems that harvest energy from vehicles that would be otherwise lost and store it onboard to be used later
- Rotaheat, which has pioneered compact technology that converts mechanical rotational energy to heat fluids at over 120C
- [SEaB Energy](#), whose patented anaerobic digestion systems in shipping containers generate clean energy from organic waste
- Senergy, which designs and manufactures integrated polymer solar thermal panels. It is now part of [Lloyd's Register](#)
- [SOMI Trailers](#), using a novel truck trailer design to to utilise the space underneath and carry 31% extra pallets
- [Stickyworld](#), a Software as a Service (SaaS) platform to collect and sort ideas, consult on proposals or engage and educate different stakeholder groups
- [Tevva Motors](#), which has developed electric range-extended vehicles that lower emissions and operational costs
- [Topolytics](#), which combines mapping, machine learning and geospatial analytics to make industrial waste visible, verifiable and valuable

## Connecting innovators

Ian Meikle, Director – Infrastructure Systems, Innovate UK says:

Clean + Cool is a great example of the role Innovate UK plays in connecting innovators with the right partners they need to succeed. The Mission tackles the human challenges to innovation, helping early stage CEOs grow their ambition, profile and network, while improving their pitch and insight.

## Engineering success

This is the sixth Clean + Cool mission. Previous missions have resulted in success, including UK engineering company Whitefox Technologies.

Through 2 missions to San Francisco and Brazil, they were able to make connections and gain knowledge of the biofuels industry and legislation in the US. This led to them pitching their solutions to US biofuel producer Pacific Ethanol. They now have a commercial deal, and are receiving interest from other companies in North America and Europe.

## [Press release: New SCOPE ADR e-learning module receives European-wide CME/CPD accreditation](#)

Doctors across Europe can now learn more about the importance of reporting suspected adverse drug reactions (ADRs) via a free e-learning module.

Prompt reporting helps make medicines safer and is part of a doctor's responsibility. This includes informing patients and carers how they can help by reporting suspected side effects themselves.

Regulators like the Medicines and Healthcare products Regulatory Agency (MHRA) rely on the reporting of suspected ADRs to make sure medicines on the market are acceptably safe. However, all reporting systems suffer from underreporting, and training healthcare professionals to report suspected ADRs is important to both raise awareness and help strengthen the system.

The e-learning module has now received the highest order of accreditation from the European Accreditation Council for CME (EACCME®). This means doctors are awarded 1 EACCME credit upon completion of the 45 minute ADR e-learning module.

The ADR e-learning module was created by the Strengthening Collaboration for Operating Pharmacovigilance in Europe (SCOPE) Joint Action project.

A survey conducted by SCOPE found many European countries lacked sustainable educational materials about ADR reporting. This e-learning aims to support healthcare professionals and medicines regulators by providing clear guidance which is rewarded with CME/CPD points.

Mick Foy, group manager for MHRA's Vigilance and Risk Management of Medicines division said:

The key aim of our work is to make sure medicines are effective and acceptably safe. The reporting of suspected ADRs is vital in helping us achieve this aim.

Doctors are critical to this as their position on the front line of care means they are often the first to recognise an adverse drug reaction.

We've created this e-learning module help doctors so they can have confidence that their reports are making a difference.

All healthcare professionals, and indeed patients themselves, can help make medicines safer by reporting any suspected side effects easily and quickly through our Yellow Card Scheme online or via the mobile app. Other countries collect reports in similar methods.

## Notes to Editor

1. The [e-learning module](#) is hosted on the [SCOPE website](#). Learners are asked to complete a [short survey](#) upon completion of the e-learning.
  2. The [Medicines and Healthcare products Regulatory Agency](#) is responsible for regulating all medicines and medical devices in the UK by ensuring they work and are acceptably safe. All our work is underpinned by robust and fact-based judgements to ensure that the benefits justify any risks. MHRA is a centre of the Medicines and Healthcare products Regulatory Agency which also includes the [National Institute for Biological Standards and Control \(NIBSC\)](#) and the [Clinical Practice Research Datalink \(CPRD\)](#). MHRA is an executive agency of the [Department of Health](#).
  3. National reporting systems for the collection of suspected adverse drug reactions (commonly known as side effects) have acted as early warning systems to help identify numerous important safety issues, many of which were not recognised as being related to a particular medicine until reports were received by medicines regulators [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)
  4. The [SCOPE Joint Action project](#) aims to support EU member states in the operation of their pharmacovigilance systems which help safeguard public health. It is funded through contributions from European Commission and the involved Member States.
  5. The [SCOPE Joint Action project](#) social media campaign to raise awareness levels of national ADR reporting systems is being taken forward through the Heads of Medicines Agencies Working Group for Communications Professionals.
  6. The [European Union of Medical Specialists \(Union Européenne des Médecins Spécialistes – UEMS\)](#) is a non-governmental organisation representing national associations of medical specialists in the European Union and in associated countries. Current membership includes 37 countries.

# Speech: Jeremy Hunt: message to NHS staff in support of their excellent work

When I was first made Health Secretary I said it was the biggest privilege of my life, and so it has proved. What I didn't realise then was that it would also become my biggest passion – working in health is not just a job but a vocation.

The election period reinforced more acutely than ever the incredible work of the NHS, particularly the way staff dealt first with the global cyber-attack and then with horrendous terror attacks in Manchester and London.

After the Manchester bombing I met nurses caring for bereaved families with incredible compassion, whilst in London I heard stories of doctors who cycled the length of the city at 2am just because they wanted to help.

These stories speak to a wider truth: NHS staff do an amazing job, often in the most difficult of circumstances. And it is this which brings us all together – our great belief in the NHS, what it stands for and what we believe it can be.

Your compassion, energy, dynamism and total dedication, day in, day out, are truly humbling.

When I look at what the NHS has achieved in recent years, I think you can feel very proud. Despite the financial crash and ensuing period of constrained budgets, today's NHS has some of its highest ever satisfaction ratings, carries out 5,000 more operations a day, has lower MRSA rates than France, Germany or Spain, and sees its highest ever survival rates for cancer, heart attacks and stroke.

One of the biggest expansions of mental health provision in Europe is underway right here, and there's been a transformation in attitudes towards patient safety in the wake of Mid-Staffs. These achievements simply wouldn't have been possible without you, our world-class doctors, nurses, paramedics and everyone else who works every day, across the country, to make the NHS the best it can be.

I am proud that this country was the first to say that no one – rich or poor, young or old – should have to worry about affording good healthcare. Indeed we have made this pledge central to how people right across the world define a civilised nation.

Going forwards, we must continue to focus not just on equity but also on excellence. We need to continue our work on patient safety, continue the transformation of mental health, continue developing new models of care and continue to put as much energy into prevention as into cure.

That's my mission – to support the NHS to become the safest, highest quality health system in the world.

This is not to ignore the fact that difficult issues lie ahead. Money is always going to be a pressure, for instance. But I am confident that, working together, we can unite the whole NHS to deliver the safest, highest quality care anywhere in the world.

I would like to take the opportunity to thank you all for your hard work to make this vision a reality.

---

## News story: GSK crowned apprentice team of the year

The five-month Brathay Apprentice Challenge saw them compete against teams from the country's leading apprentice employers and training providers. The GSK apprentices battled off tough competition from seven other national finalist teams after proving their logistical, team building and communications skills.

As part of the challenge the team also delivered a community project, which involved creating a series of four short films about the dangers of asthma attacks. The films were made in memory of a little boy, Joshua West who had a fatal asthma attack. The team went on to show the films in schools and sports clubs.

The Brathay Apprentice Challenge, the search for the apprentice team of the year is supported by the National Apprenticeship Service. In 2017, teams reached over 70,000 young people to raise awareness of the benefits of apprenticeships and recruited over 500 new employers interested in offering apprenticeships.

GSK narrowly beat Nottingham City Homes into second place and JCB who finished third. Teams from Derwent Training Association, IBM, Redrow Homes, Severn Trent Water and WSP also competed in the national finals.

The total of eight National Finalists were selected from 75 teams and 650 apprentices who entered the Challenge. Since January, the teams have worked hard to spread the word about apprenticeships and have visited more than 555 schools, careers fairs and youth groups to encourage young people to consider an apprenticeship. The apprentice teams have also reached out to their local communities and delivered 44 community projects to benefit young people.

Team member and engineering apprentice, Joseph Hambley said on winning the challenge:

"I am happy for me, happy for my team and happy for my employer. It is a great honour for all of us to have won the title apprentice team of the year and have our hard work recognised."

Phil Wilson, Site Director at GSK Ulverston, congratulated their apprentices and said:

"What an amazing achievement. I am so very proud of the full team. We have watched them be stretched and grow throughout the challenge.

The highlight was seeing them develop from being all about the challenge and winning it to being about making a major contribution to the community in raising awareness of asthma and helping save lives. This is a great recognition of the Joshua West legacy."

Sue Husband, Director of the National Apprenticeship Service, said:

"Congratulations to GSK on being crowned the 2017 apprentice team of the year and to all of the teams that have taken part in this year's challenge. Together they have shown the genuine difference an apprenticeship can make.

The new skills and the new experiences these apprentices have gained in the challenge will add to the opportunity apprenticeships provide to earn while you learn, as well as helping the employer grow and increase its productivity.

The hard work the teams have put into the challenge has made real differences to their communities, the next generation of young people thinking about their careers and encouraged more employers to take on apprentices.

They are great ambassadors for apprenticeships."
