

Principal contractor sentenced for unsafe excavation work

A principal contractor has been sentenced after he was found to have supervised unsafe excavation work at a site in Denton, which put workers in danger and rendered the neighbouring property unstable.

Manchester Magistrates' Court heard how between 2019 and 2020 Mustapha Matib had employed several groundworkers to excavate land at Gibraltar Lane, Denton in preparation for the construction of a family home. An inspection was carried out at the site in August 2020 after neighbours raised significant concerns, work was stopped when serious fall risks and potential collapse were identified.

An investigation by the Health and Safety Executive (HSE) found that as principal contractor Mr Matib had failed to prepare a construction phase plan, with risk assessments and method statements detailing how the work would be safely carried out. He also failed to appoint a site manager with suitable skills, knowledge and experience to plan, manage and monitor the work; and ensure the health, safety, and welfare of those carrying out the work or others who may be affected by their actions.

Inspectors also identified a large, deep and unprotected excavation, which gave rise to a foreseeable fall risk. In addition, excavations were not

shored or suitably battered back to prevent the risk of collapse. Personal protective equipment had not been provided and some workers were working barefoot on site. The site was not adequately secured to prevent unauthorised persons from entering and a neighbouring property had been undermined with parts of the property at risk of collapse due to the excavation work.

Mustapha Matib of Allerton Road, Bradford pleaded guilty to breaching Regulations 2(1) and 3(1) of the Health & Safety at Work etc. Act 1974. He was sentenced to sixteen weeks imprisonment suspended for twelve months, ordered to carry out 200 hours unpaid work and pay costs of £5,673.

Speaking after the hearing, HSE inspector Phil Redman said: "Inspectors will not hesitate to take appropriate enforcement action against dutyholders who fall below the required standards and put lives at risk."

[Livestock auction mart fined after fatal incident involving a dairy bull](#)

A livestock auction mart has been fined after an employee was fatally injured when he was struck by a dairy bull he was helping to load it on to a lorry.

Preston Magistrates' Court heard that on 25 August 2017, the employee was helping to move a bull and four cows towards a waiting lorry at the premises of his employer Gisburn Auction Marts Ltd. Whilst trying to load the livestock into the lorry, the bull turned and attacked the employee, causing fatal injuries.

An investigation by the Health and Safety Executive (HSE) found that there weren't any suitable refuges or barriers within the loading area for those

handling the livestock to shelter behind, if for example, cattle became fractious.

Gisburn Auction Marts Ltd of The Auction Mart, Gisburn, Clitheroe, Lancashire pleaded guilty to breaching Section 2(1) of the Health & Safety at Work Act 1974. The company was fined £18,000 and ordered to pay costs of £8,819.

Speaking after the hearing, HSE inspector Anthony Banks said: "This incident could so easily have been prevented. The bull was able to strike the employee because he had been unable to outrun or out manoeuvre the bull and he was unable to seek protection from any form of refuge or barrier when it began to charge. The company should have undertaken a suitable and sufficient risk assessment to identify, and put in place, the appropriate control measures."

Spring manufacturer sentenced after worker severs fingers

A spring manufacturing company has been fined after an employee had two fingers of his right hand severed whilst attempting to lubricate a bandsaw.

Manchester Magistrates' Court heard how on 2 October 2019, a labourer employed by Hanson Springs Ltd in Rochdale was assisting in the cutting back department to cut sections of steel spring using a vertical bandsaw when the blade began to smoke and squeal. The worker decided to replace the blade, as on inspection it appeared heavily worn. He attempted to lubricate the new blade, by pressing a cardboard tube of wax onto the exposed section of it whilst it ran. The tube was drawn in, in turn drawing in the worker's hand, severing the middle two fingers at the first and second knuckle respectively.

An investigation by the Health and Safety Executive (HSE) found that although the worker had received training from the supervisor in using the machine, it was of poor quality, no formal competency assessment had been carried out,

nor was he certain that he could use the machine unsupervised. Furthermore, despite lubrication of the blades in this manner being standard practice within the company, it was unnecessary as the machine was self-lubricating. The worker had been shown how to do this during training in order to minimise the time needed for the blade to become greased using the inbuilt lubrication system and therefore operational. Operational management was not aware of this dangerous practice and therefore no safe method of lubricating the blades had been provided.

Hanson Springs Ltd of Hanson Place, Gorrells Way, Rochdale, Lancashire pleaded guilty to breaching Section 2 (1) of the Health and Safety at Work etc. Act 1974. The company was fined £200,000 and ordered to pay costs of £5,394.

Speaking after the hearing, HSE inspector Peter Lennon said: "This incident could so easily have been avoided.

"Employers should ensure they carry out an assessment of the risks and put in safe system of works for the operation of all machinery.

"Employers should also ensure that adequate supervision, instruction and training is provided to workers."

[Company fined after worker suffered fall from height](#)

Infiniti Roofing and Construction Ltd has been sentenced for breaches of safety regulations after an employee fell through a gap in scaffolding and sustained multiple injuries whilst working on a building at Havers Hill, Eastfield, Scarborough.

York Magistrates' Court heard that, on 15 November 2017, a 20-year-old labourer who was working on the roof, fell three metres through a gap in the

scaffolding onto an office roof below causing injuries to his left wrist and hand.

An investigation by the Health and Safety Executive (HSE) found that when the labourer was moving insulation panels on the roof, he stumbled and fell through the gap. Although Infiniti Roofing and Construction Ltd had taken measures to reduce the risk of a fall the scaffolding did not fully extend along the roof in the area where the insulation panels were stacked and stored. The fall caused the labourer to sustain a dislocation to his left wrist and a broken bone in his hand which has required him to undergo several operations.

Infiniti Roofing and Construction Ltd of Cayton Low Road, Scarborough, North Yorkshire pleaded guilty to breaching Section 3 (1) of the Health & Safety at Work etc Act 1974. The company has been fined £22,667 and ordered to pay £7,228 in costs.

After the hearing, HSE inspector Jayne Towey commented: "The accident could have been prevented if edge protection, constructed and installed to industry standards, was in place where there was a risk of a fall from height."

Fine for construction company after worker injured because of brake failure

A construction company has been fined for failure to maintain the braking system of an articulated dumper truck.

Basingstoke Magistrates' Court heard how Nelson Plant Hire failed to ensure

the dumper truck was subject to a regular maintenance regime resulting in a worker being seriously injured.

An investigation by the Health and Safety Executive (HSE) into the incident on 11 May 2018 at Whitehouse Field, Andover, found that during construction operations, the operator of a large Volvo articulated dumper truck was working on a site at the top of a steep slope adjacent to a public road. The operator was reversing the truck to carry out a tipping operation, but the brakes did not function. Consequently, he lost control of the vehicle which careered backwards across a busy A-road and tipped on to its side. The operator's injuries included multiple fractured ribs and a punctured lung.

The HSE investigation determined that the dumper truck had not been subject to a maintenance regime in accordance with the manufacturer's instructions and the brakes did not function correctly.

Nelson Plant Hire Ltd of Homestead Farm, Weyhill Road, Penton Corner, Andover, Hants, pleaded guilty to breaching Regulation 5 of the Provision and Use of Work Equipment Regulations 1998 (PUWER98) for failing to maintain the plant and was fined £10,000- and ordered to pay costs of £8,826.70

After the hearing, HSE inspector Dominic Goacher commented: "It is essential that construction plant is correctly maintained and all plant operators need to follow the manufacturer's recommendations in respect of maintenance. Companies should be aware that HSE will not hesitate to take appropriate enforcement action against those that fall below the required standards."
