

Company fined after admitting safety failures

An Inverurie company has been fined after a teenage worker was seriously injured.

Aberdeen Sherriff Court heard that 17-year-old Michael Paul Mark Mclean was found seriously injured at the premises of Denholm MacNamee Limited on 14 August 2015.

The Inverurie company, which provides support services to the oil, gas and utilities industries, admitted safety failings.

An investigation by the Health and Safety Executive (HSE) identified failings by Denholm MacNamee Limited in relation to the risks to the health and safety of Michael in his special capacity as a young person at work and in relation to ensuring the health, safety and welfare of all the employees who were engaged in the task of ultra-high pressure blasting and painting of a cable spooler machine.

Denholm MacNamee Limited of Souterford Avenue, Inverurie Business Park, Inverurie pleaded guilty to breaching Section 2(1) of the Health and Safety at Work etc Act 1974 and was fined £120,000 on 4 December 2017.

Speaking after the hearing HSE principal inspector, Niall Miller said:

“The failures of Denholm MacNamee Limited put Michael McLean and other employees at a greater risk of injury.

“This conviction highlights the need for effective risk management particularly when those involved in the work activity are young or otherwise vulnerable. Employers must ensure that they consider the capacity of their workforce and provide appropriate levels of control to prevent risk occurring”

BUPA fined £3m after death of elderly resident

A care provider has been fined following the death of a resident at an Essex nursing home after he contracted Legionnaires' disease.

Kenneth Ibbetson, 86, died three months after moving into Hutton Village Nursing Home, which is operated by BUPA Care Homes (BNH) Ltd.

Ipswich Crown Court heard that Mr Ibbetson had moved into the care home in March 2015 when he was no longer able to cope at home. In June 2015 Mr Ibbetson contracted Legionnaires' disease, a serious waterborne form of pneumonia, and later died in Basildon Hospital on 23 June 2015.

An investigation into Mr Ibbetson's death was carried out by the Health and Safety Executive (HSE).

The investigation found that for more than a year, during which time major refurbishment works were carried out, BUPA Care Homes (BNH) Ltd failed to implement the necessary control and monitoring measures required to safely manage their hot and cold water system. It also found those responsible for overseeing legionella controls and for taking crucial water temperature measurements had not been trained to the required standard.

BUPA Care Homes (BNH) Ltd of Bridge House, Outwood Lane, Leeds, pleaded to breaching Section 3 (1) of the Health and Safety at Work Act 1974. The company has today been fined £3m and ordered to pay costs of £151,482.

Mr Ibbetson's daughter Caroline Peters told the court: "Our father's tragic and untimely death was a terrible shock to me and my two sisters. We had carefully selected Bupa Nursing Home at Hutton Village, expecting that a leading health care company could be trusted with our father's health and safety. (His death) shouldn't have happened.

"The evidence (of)...non-conformities and lack of managerial training was shocking and depressing and brought on feelings of utter despair for our family."

Speaking after the hearing, HSE principal inspector Vicky Fletcher said: "It is heart-breaking to think Kenneth contracted Legionnaires' a matter of weeks after moving into the Hutton Village Care Home. His family have been left devastated by his sudden death.

“Mr Ibbetson and other residents were exposed to the risk of contracting Legionnaires’ disease because adequate controls were not in place. The risk is more acute in care home settings because residents are more susceptible due to their underlying health conditions. We would expect those who have a duty of care to understand this and have the necessary controls in place to manage the risk.”

[Walsall metal finishing company fined after worker suffers multiple fractures](#)

A metal finishing company has been fined after a worker suffered multiple fractures to her leg when a components trolley overturned.

Dudley Magistrates Court heard how the Anochrome Limited employee was undertaking a routine operation known as ‘jigging’, which involves loading and unloading metal parts onto a jig frame, when the trolley and jig frame overturned and landed on the injured person

An investigation by the Health and Safety Executive (HSE) into the incident, which occurred on 21 November 2016, found that there was a failure to assess risk, a failure to implement a safe system of work and a failure to ensure that employees were appropriately trained and monitored to ensure that the task could be carried out safely.

Anochrome Limited of Reservoir Place, Walsall pleaded guilty to breaching Section 2(1) of the Health and Safety at Work Act 1974 and was fined £24,000 and ordered to pay costs of £3,775.72.

Speaking after the hearing, HSE inspector Mahesh Mahey said "If a suitable safe system of work has been in place prior to the incident, the life changing injuries sustained by the employee could have been prevented."

Company fined after worker suffers spinal injuries

A roofing company has been fined after roof work at height was undertaken unsafely.

Dudley Magistrates' Court heard how people were working on the roof with no safety measures in place to prevent them from falling.

Woodhull Roofing Ltd was contracted to carry out work for Sandwell Metropolitan Borough Council. The work was to coat over roofing bolts in an asbestos cement roof, to seal leaks. Whilst working on the corrugated roof a worker misplaced his footing while moving a board into another position, causing him to step on a roof light. He fell through the roof onto a concrete floor approximately four metres below. He broke several ribs and suffered spinal injuries.

An investigation by the Health and Safety Executive (HSE) found that the roof work was not undertaken using the correct precautions i.e. sufficient platforms, coverings, guard rails, netting or similar means of support or protection.

Woodhull Roofing Ltd of Stratford Road, Shirley pleaded guilty to breaching

Regulation 9 (2) of the Work at Height Regulations 2005 and has been fined £40,000 and ordered to pay costs of £495.27.

Speaking after the hearing, HSE inspector Gareth Langston said “Falls from height remain one of the most common causes of work related fatalities in this country and the risks associated with working at height are well known.

“In this case suitable measures such as sufficient platforms, handrails and netting should have been provided to ensure the health and safety of people working at height on the roof”.

Maidstone company fined following death of worker

A Maidstone company has been sentenced after a maintenance worker fell five metres through a roof and died.

Folkstone Magistrates’ Court heard that on, 23 September 2015, Justin Hewitt fell through an opening that was being created on the roof of the premises of Maidstone Studios Ltd.

An investigation by the Health and Safety Executive (HSE) found the tower scaffold used to access the roof was damaged, had not been correctly erected and had been purchased second hand by Maidstone Studios Limited with no manufacturer’s instructions. No formal planning had been recorded for the work, which was outside the scope of the general maintenance duties of the team.

The work had been discussed, and planned to be carried out from below, but no-one identified the errors with the towers, ladder sections being the wrong way round, damaged bracing or the inadequate guardrails.

The towers were erected by Mr Hewitt, but he had been given no formal training on how they should be erected safely. Although he was supervising the work, no checks were made of how it was actually being carried out.

Maidstone Studios Ltd pleaded guilty to breaching Sections 2(1) and 3(1) of the Health and Safety at Work Act 1974. The company has been fined £30,000 and ordered to pay costs of £6,487.76.

HSE inspector Stephen Green said: "Had the work been properly planned with suitable access equipment, correctly placed and erected, by those with adequate training, the work could have been done safely and this tragedy could have been averted.

"Falls from height remain one of the most common causes of work related fatalities in this country and the risks associated with working at height are well known."
