

OECD Ministerial Council Statement and Outcomes

08/06/2023 – Ministers have issued a joint statement at the conclusion of this week’s Council meeting at Ministerial level. Under the Chairmanship of the United Kingdom, with Costa Rica and New Zealand as Vice-Chairs, Members met for discussions around the theme “Securing a Resilient Future: Shared Values and Global Partnerships.”

[Read the 2023 Ministerial Council statement.](#)

The Ministerial Council Meeting (MCM) is the OECD’s highest-level forum, attended by Ministers of Finance, Economy, Foreign Affairs, Trade and other government departments from OECD Member and Partner countries, and by representatives of International Organisations.

This year’s MCM was opened by OECD Secretary-General Mathias Cormann, United Kingdom Secretary of State for Foreign, Commonwealth and Development Affairs James Cleverly, Ukrainian Prime Minister Denys Shmyhal, Costa Rican Minister of Foreign Trade Manuel Tovar, New Zealand Minister of Trade and Export Growth Damien O’Connor, Indonesian Minister of Finance Sri Mulyani Indrawati, and Indian G20 Sherpa Amitabh Kant.

During the two-day meeting, Ministers welcomed the launch of the Ukraine Country Programme and welcomed the adoption of a new OECD Strategic Framework for the Indo-Pacific. Additionally, they welcomed:

- the OECD’s Contribution to Promoting Gender Equality, the proposed Flagship Report on Gender Equality, the OECD Dashboard on Gender Gaps, the new Gender Data Initiative, and looked forward to the development of gender policy reviews and the establishment of a Gender Equality Forum to embed best practice;
- the updated OECD Guidelines for Multinational Enterprises on Responsible Business Conduct;
- progress made on the OECD-Africa Partnership;
- progress made with the inaugural meeting and growing membership of the Inclusive Forum on Carbon Mitigation Approaches (IFCMA) and encouraged broad membership, including large emitters;
- an Accession Progress Update for Brazil, Bulgaria, Croatia, Peru and Romania,
- the approval of the OECD’s Contribution to Promoting Open Markets and a Rules-Based International Trading System in Good Working Order; and
- the creation of the Global Forum on Technology and the OECD Global Forum on Building Trust and Reinforcing Democracy.

Ministers also welcomed the Annual Update on OECD Standard-Setting and

adopted the following new or updated OECD legal instruments:

- *Recommendation on Environmental Compliance Assurance*
- *Recommendation on Fighting Bid Rigging in Public Procurement*
- *Recommendation on Improving the Gender Balance in the Nuclear Sector*
- *Recommendation on Intellectual Property Rights and Competition*
- *Revised Recommendation on Principles of Corporate Governance*
- *Recommendation on Regional Development Policy*
- *Recommendation on SME Financing*
- *Recommendation on the Governance of Digital Identity*
- *Revised Recommendation on the International Standards for Automatic Exchange of Information in Tax Matters*
- *Decision-Recommendation concerning Chemical Accident Prevention, Preparedness and Response*
- *Revised Decision on the Guidelines for Multinational Enterprises on Responsible Business Conduct*

More detailed information and supporting documents on meeting outcomes and key issues will be available on the Ministerial Council Meeting website at <http://www.oecd.org/mcm/>.

Working with over 100 countries, the OECD is a global policy forum that promotes policies to preserve individual liberty and improve the economic and social well-being of people around the world.

[Challenges ahead as populations age](#)

08/12/2021 – The COVID-19 pandemic has taken a heavy toll among elderly people although retirees have seen their pension payments well protected across OECD countries. Future pension entitlements have also been well protected thanks to the exceptional policy response to the crisis, according to a new OECD report.

[Pensions at a Glance 2021](#) says however that the long-term financial pressure from ageing persists. Pension finances deteriorated during the pandemic due to lost contributions, and shortfalls have been mainly covered by state budgets. Putting pensions systems on a solid footing for the future will require painful policy decisions,

Although life expectancy gains in old age have slowed since 2010, the pace of ageing is projected to be fast over the next two decades.

The size of the working-age population is projected to fall by more than one-quarter by 2060 in most Southern, Central and Eastern European countries as well as in Japan and Korea.

Young people have been severely affected by the crisis and might see their future benefits lowered, especially if the pandemic results in longer-term scarring and difficulties in building their careers. Allowing early access to pension savings to compensate for economic hardship, as observed in some countries such as Chile, may also generate long-term problems: unless future higher savings offset these withdrawals, low retirement benefits will be the consequence.

Mandatory schemes provide an average future net replacement rate of 62% to full-career average-wage workers, ranging from less than 40% in Chile, Estonia, Ireland, Japan, Korea, Lithuania and Poland to 90% or more in Hungary, Portugal and Turkey.

Over the last two years, many countries significantly reformed earnings-related pension benefits, including Estonia, Greece, Hungary, Mexico, Poland and Slovenia. Chile, Germany, Latvia and Mexico also increased income protection for low earners. Action on retirement ages was limited. Sweden increased the minimum retirement age for public earnings-related pensions; the Netherlands postponed the planned increase while reducing the pace of the future link to life expectancy; and Ireland repealed the planned increase from 66 to 68 years. Denmark, Ireland, Italy and Lithuania have extended early retirement options.

Based on legislated measures, the normal retirement age will increase by about two years in the OECD on average by the mid-2060s. The future normal retirement age is 69 years or more in Denmark, Estonia, Italy and the Netherlands, while Colombia, Luxembourg and Slovenia will let men retire at 62. Women will maintain a lower normal retirement age than men in Colombia, Hungary, Israel, Poland and Switzerland.

Pensions at a Glance 2021 says that the biggest long-term challenge for pensions continues to be providing financially and socially sustainable pensions in the future. Many countries have introduced automatic adjustment mechanisms (AAM) in their pension systems that change pension system parameters, such as pension ages, benefits or contribution rates, when demographic, economic or financial indicators change. These automatic adjustment mechanisms are crucial to help deal with the impact of ageing.

About two-thirds of OECD countries use some form of AAM in their pension schemes, adjusting retirement ages, benefit levels and contribution rates and using an automatic balancing mechanism. OECD analysis shows that, over the years, the automatic adjustment mechanisms were sometimes suspended or even eliminated in order to avoid pension benefit cuts and retirement-age increases. Yet, compared to the alternative of discretionary changes, AAMs can be designed and implemented to generate changes that are less erratic, more transparent and more equitable across generations.

The report and country notes for France, Germany, Italy, Mexico, Spain,

Sweden, the United Kingdom and the United States are available at <https://www.oecd.org/pensions/oecd-pensions-at-a-glance-19991363.htm>.

[Incorporating well-being into recovery policies](#)

25/11/2021 – The COVID-19 pandemic has not only had devastating effects on physical health and mortality but has touched every aspect of people's well-being, with far-reaching consequences for how we live and work, according to a new study by the OECD.

[COVID-19 and well-being: life in the pandemic](#) says the virus caused a 16% increase in the average number of deaths across 33 OECD countries between March 2020 and early May 2021, compared with same period over the previous four years. Over the same time frame, survey data in the report reveal rising levels of depression or anxiety and a growing sense among many people of loneliness and of feeling disconnected from society.

Government support helped to sustain average household income levels in 2020 and stemmed the tide of job losses, even as average hours worked fell sharply. Although job retention schemes offered workers some protection, 14% of workers in 19 European OECD countries felt it was "likely they would lose their job" within three months, and nearly 1 in 3 people in 25 OECD countries reported financial difficulties.

The report says experiences of the pandemic have varied widely depending on age, gender and ethnicity, as well as on the type of job people do and on their level of pay and skills. The crisis also aggravated existing social, economic and environmental challenges.

In those countries with available data, workers from ethnic minorities have been more likely to lose their jobs during the pandemic. Mental health deteriorated for almost all population groups on average in 2020 but gaps in mental health by race and ethnicity are also visible. COVID-19 mortality rates for some ethnic minority communities have been more than twice those of other groups.

Younger adults experienced some of the largest declines in mental health, social connectedness and life satisfaction in 2020 and 2021, as well as facing job disruption and insecurity.

Launched on the first anniversary of the new OECD Centre for Well-being, Inclusion, Sustainability and Equal Opportunity (WISE), the report offers a primer for OECD recommendations on well-being. It assesses the impact of the pandemic across the 11 dimensions identified in the OECD's Well-being Framework – income and wealth; work and job quality; housing; health; knowledge and skills; environment; subjective well-being; safety; work-life balance; social connections; and civil engagement. It features data on inclusion and equality of opportunity, and also considers how the stocks of economic, human, social and environmental resources that sustain well-being have fared.

The report argues that as governments move from emergency support to stimulating the recovery, they need to refocus their action on what matters most to people's well-being.

A key objective must be to increase the job and financial security of households, and particularly those most affected by the crisis – with a focus on the most vulnerable, on youth, women and the low skilled. Addressing the burden of poor physical and mental health and a cross-government approach to raising the well-being of the most disadvantaged children and youth must also be prioritised. The report also stresses that actions to raise living standards and equality of opportunity must take place within the context of greening the economy: the climate and biodiversity crises, like the pandemic, require a coordinated response across public policy.

A well-being approach, the report explains, looks at government objectives as interconnected goals, focusing on how different policies can complement each other. Such an approach encourages decision-making that simultaneously considers impacts on current well-being, inclusion, and the sustainability of well-being over time. For instance, improving long-term economic

opportunities through raising child well-being, or aligning efforts to combat climate change with social and economic objectives by increasing employment and mobility for people and places left behind.

Natural, human and social capital will need rebuilding after the crisis, the report adds. Reducing inequalities in access to, and uptake of lifelong learning, for example, will help people – especially the disadvantaged – get high quality jobs by developing training programmes that address skills gaps and emphasise digital abilities.

Social capital – the norms, shared values and institutions that foster co-operation – has shaped communities' responses to the pandemic. Data from across OECD countries shows that both trust in institutions and interpersonal trust influenced the effectiveness of pandemic containment. Although it has recently shown signs of weakening, institutional trust in 2020 in most OECD countries was at its highest since records began in 2006.

The report says reinforcing trust is key to reconnecting people to their societies, and to the institutions that are meant to support them. By doing so, the well-being of citizens is improved both today and in a post-pandemic future.

The full report together with individual country notes and data on well-being during the pandemic is available at: <https://www.oecd.org/wise/covid-19-and-well-being-1e1ecb53-en.htm>.

[Invest in skills, digitalisation and the green transition, says the OECD](#)

18/11/2021 – Swift and effective government support has helped France to rebound rapidly from its COVID19-induced recession. Using the country's announced Recovery and Investment Plans to invest in education, worker training, and the green and digital transitions should result in stronger and more resilient growth, according to a new OECD report.

The latest [OECD Economic Survey of France](#) says that while it is important not to prematurely withdraw support for households and firms, as the recovery gains traction support measures should increasingly be targeted at the most viable businesses and sectors and should favour investment. Professional training and support for workers transitioning to new jobs should be strengthened to ease labour market shortages and address the mismatch between skills and the needs of the business sector.

“France's response to the COVID-19 crisis has been swift and effective, enabling it to emerge from the health crisis with jobs and household incomes well protected and its economic capacity largely preserved,” **OECD Secretary-General Mathias Cormann** said, launching the Survey alongside **French Minister of Economy, Finance and Recovery Bruno Le Maire**. “A rigorous implementation of the government's Recovery and Investment Plans will help to turn the rebound into lasting sustained growth, building a greener, more digital and more resilient economy.”

After an 8.0% contraction in economic activity in 2020, the Survey projects a strong GDP rebound of 6.8% in 2021 and 4.2% in 2022 as domestic demand resumes. This follows a period of slower growth in France in the decade leading up to the COVID-19 crisis marked by weak gains in productivity and living standards. Low-skilled and young workers face difficulties in accessing the labour market and unequal opportunities have weakened inter-generational social mobility. The pandemic has also exposed a lag among small and medium-sized enterprises in adopting digital technologies.

These structural weaknesses can only be addressed through reforms, the Survey says. It calls for renewed efforts to boost skills to help sustain jobs and productivity growth. A combination of labour market, taxation and spending reforms could lead to a tangible increase in living standards in the years ahead, according to the Survey.

It is particularly important to use the recovery period to improve the fiscal framework and notably the effectiveness of public spending through reviews

and better allocation of resources, the Survey says. France's public spending as a share of GDP is the highest of OECD countries, and the high level of social expenditures, notably on pensions, as well as looming pressure from an ageing population makes it vital to rebalance spending towards more investment. This would support growth and help to stabilise and then gradually lower the public debt-to-GDP ratio.

The government has already pursued important reforms to reduce labour market segmentation and strengthen active labour market policies. Ensuring broad access to retraining and enforcing high quality standards for lifelong training courses would boost employment opportunities.

France has made the transition towards a greener economy a pillar of its recovery plan, and it is vital that this leads to increased private investment in green infrastructure and technology. Greater incentives are needed to drive behavioural changes within businesses and households. To be fully effective, this should extend to all available policy instruments, including regulation and R&D as well as progressively aligning carbon prices across sectors, albeit alongside complementary measures. To avoid unfair impacts on people and sectors, it is essential to support vulnerable households and firms, through targeted measures, for example help-to-buy schemes for clean vehicles and equipment.

[Investment in health system resilience needed: OECD](#)

09/11/2021 – COVID-19 contributed to a 16% increase in the expected number of deaths in 2020 and the first half of 2021 across OECD countries. Life expectancy fell in 24 of 30 countries with comparable data, with drops particularly large in the United States (-1.6 years) and Spain (-1.5 years), according to a new OECD report.

[OECD Health at a Glance 2021](#) says that the mental health

impact of the pandemic has been huge, with prevalence of anxiety and depression more than double levels observed pre-crisis in most countries with available data, most notably in Mexico, the United Kingdom and the United States.

COVID-19 has also had a major indirect impact on people not infected with the virus. For example, breast cancer screening fell by an average of 5 percentage points in 2020 compared to 2019, across OECD countries with available data. The median number of days on a waiting list increased on average by 58 days for hip replacement, and 88 days for knee replacement in 2020, as compared to 2019.

The COVID-19 pandemic has led to a sharp increase in health spending across the OECD. Coupled with reductions in economic activity, the average health spending to GDP ratio jumped from 8.8% in 2019 to 9.7% in 2020, across OECD countries with available data. Countries severely affected by the pandemic reported unprecedented increases. The United Kingdom estimated an increase from 10.2% in 2019 to 12.8% in 2020, while Slovenia anticipated its share of spending on health rising from 8.5% to more than 10%.

The pandemic highlights the persistent shortage of health workers stressing the importance of investing more in the years ahead on improving primary care and disease prevention and strengthen the resilience and preparedness of health systems. Indeed, the report says that health spending continues to focus mainly on curative care rather than disease prevention and health promotion, and much more is spent on hospitals than on primary health care. Prior to the pandemic, spending on health amounted to over USD 4 000 per person on average across OECD countries, reaching almost USD 11 000 in the United States. Inpatient and outpatient services make up the bulk of health spending, typically accounting for 60% of all health spending.

Although the number of doctors and nurses have increased over the past decade in nearly all OECD countries, shortages persist. The lack of health and long-term care staff is proving to be more of a binding constraint than hospital beds and equipment, says the report.

The pandemic has also underscored the impact of unhealthy lifestyles, with smoking, harmful alcohol use and obesity increasing the risk of people dying from COVID-19. Yet spending on disease prevention remains relatively low, accounting for only 2.7% of all health spending on average.

Despite daily smoking rates decreasing in most OECD countries over the last decade, 17% still smoke daily. Rates reached 25% or more in Turkey, Greece, Hungary, Chile and France.

People who drink heavily range from 4% to 14% of the population across the OECD countries analysed, yet consume 31% to 54% of alcohol. Harmful drinking is particularly high in Latvia and Hungary.

Obesity rates continue to rise in most OECD countries, with an average of 60% of adults measured as overweight or obese. Obesity rates are highest in Mexico, Chile and the United States.

OECD Health at a Glance 2021, together with country notes for Australia, Austria, Chile, Colombia, Costa Rica, France, Germany, Italy, Japan, Mexico, Spain, Switzerland, the United Kingdom and the United States, is available at www.oecd.org/health/health-at-a-glance.htm.
